Laura,
Evidently there are many radio operators worldwide that don't share
your views...
Thanks for your comment anyway...

Pete,
Thanks for the reply.
Knowing the names "Grayhill" and "Oak Grisby" (recently acquired by Electroswitch) makes it a lot easier to search eBay for replacement parts. I will keep looking.
I do have a schematic diagram for my NRD-91, but not the parts list. Do you have that? If so, would you please check and see what the manufacturer has for parts info?
I am not at all opposed to retrofitting in an optical encoder, but I would like to know how many "clicks" to the turn the original has. I may be able to remove the lid on mind and use magnification and just count them. Of course I need to remove the existing encoder first, so I can take reliable physical measurements. I defiantly want to reuse the original know and I think it would be nice to have the same number of counts per revolution (but who know? Maybe certain modern optical encoders with more or less counts per turn would work out to be more desirable.
So thanks again for what you told me, and I am still looking for that conductive epoxy.
:-)-
Stan (K7SJB)

----------

You and others are spitting into the wind, but that is your privilege.

As someone else stated elsewhere, usenet is not a money maker. That is the
problem, lock, stock and barrel.

It was nice while it lasted and it lasted a whole lot longer than I dreamed
it would.

Ed Cregger

For years now video 'AOC Gold' (http://www.usfine.com/Age-of-Conan-USA-c-151.html) gamers have been seeking assistance 'Age of Conan Gold' (http://www.usfine.com/Runescape-Powerleveling-c-90.html) in playing and conquering the games that they live for. This assistance is sometimes found online, from television shows, or printed cheat materials. 'Age of Conan Power Leveling' (http://www.usfine.com/Age-of-Conan-US-PL-c-146.html) Many of these items have successfully helped gamers achieve victory, but they cannot help with all games. 'AOC Power leveling' (http://www.usfine.com/Age-of-Conan-US-PL-c-146.html) Using weapons to conquer and efeat may not sound that difficult, but if you have played before than you may realize that it is not as easy as it sounds. The good and valuable weapons must be paid for with . The easiest way to find is to buy it. Similar to the above mentioned resources, purchasing is a great way for a player to enjoy and 'Age of Conan PowerLeveling' (http://www.usfine.com/Age-of-Conan-US-PL-c-146.html) conquer the game.

This is exactly the kind of defeatist attitude that prevents people from even trying to solve problems.

You are right that everything is about money now. Not just making money but making a lot of it. Unfortunately, the internet has become a commercial venture and with that change its becomming harder to maintain any of its former public service qualities. Nonetheless, Time-Warner should be told its getting at least a part of its customer base mad. Most corporate management has isolated itself from its customers to the degree that one can not even communicate with them at all. For instance, check out the Disney Company's corporate web site. Here, at least, is a name and phone number. Dun these idiots. Of course, it may have no effect but it _could_ stave off discontinuance for a time. Or, they may outsource Usenet in the same way that Earthlink has. As an Earthlink subscriber I can testify that the outsourced news servers are far better run than anything Earthlink, Mindspring, Netcom, whatever, ever had.

Usenet is a part of a full-service ISP. If TW doesn't want to continue it they should either offer a farmed-out service without raising their prices or lower their prices because they are offering a crippled service. Or, go elsewhere and drop them. Drop their cable service also, there are others or you can learn to live without television and save your brain.

I'm looking to get more into the hobby. Probably more on the listening side. I have had a small shortwave radio for years, and love listening to broadcasts from around the world. Where would be the best resource online to begin investigating what equipment is out there, and where I can learn more? Who do you all trust to buy from?? Thanks.

Good question, but I agree. All black, lots of knobs & buttons, and you have to read the manual (thick, does it have mistakes & bugs?) before you can use it. I used to have a TS-520. I knew how to use it without reading the manual (just from basic principles), and readout which is too "busy".

HF Ham radios use
> to be a thing of beauty,

I always thougth the Colins S line (etc) to be the absolute tops in
esthetics. Old Halicrafters (SX-99, 101, 96, 100, etc., my next second
best).

> but now most of them are butt ugly!

Yeah, and I'd rather look at the Mona Lisa.

> Icom Radios all look like oversized Palm Pilots
>
> Kenwood HF Radios - What where they thinking?
> TS-480? - Yuck! I would not want that thing on my desk.
> TS-2000 - Deaf, poor selectivity, and ugly.

Technology evolution has all geared to _specification_ features and not
good common sense. Who needs 200 frequecy memories? What fraction of all
hams really "watch TV" on the spectrum analyzer readout on the blowout
rigs. How many of those knobs go "beep" when you push them?

More below...

If you think about all the sci-fi movies, high tech military movies, its
the same thing. Overdone details.

> What happened to the radio equipment that you could display proudly

> not want to look at it?

You've got a tough life ahead of you: try to find those old boat anchors
and try to restore one (xcvr) or two (xmtr-rcvr), and use it.

Me, I'm building my own homebrew all tube gear, out of junk box parts.
Looks like hell (nobody would give me 50 cents for it) but I love it and
can fix it myself (and its worth a million bucks to me).

I have bought from the places below and it depends on the price (make sure
you check the shipping charges) and if they have it in stock at the time.
They seem to be the biggest stores in the business.

http://www.aesham.com/

http://www.aesham.com/

http://www.hamradio.com/

I am sure there are other places but those are the ones I have had dealings
with that are still in business.

Hamfests are also a place to checkout for new and used gear.   Last year I
was able to buy an Icom for about $ 50 less at a show than I could order it
for.
This was on about a $ 1500 transceiver
.

I ment to add Texas Towers instead of AES twice.

It is always good to go to the 800 numbers and ask what it will cost
including shiping.   One place I ordered a 50 amp DC supply from cost more
for the supply , but the shipping was much greater at another place due to
the thing being about 50 lb.

It seems that some places are less expensive for differant items. Then some
places just don't have items other places have.

Always a good idea to check out Burghardt:

http://www.burghardt-amateur.com

They are often, but not always, a bit cheaper.

I have bought from them for years with only one minor problem. If they are out of something, or as often the case with MFJ products it is back ordered, they sometimes forget to offer that information if you order on line. Twice, both involving MFJ-owned companies, I have had to ask when the shipping date is, and finding that it may be a few weeks. Or more. I still do business with them, but via the 800 number where I can ask.

```

```

James is correct... that the RF clipping technique is somewhat more
effective. What he fails to mention is that it's more complex... and
not easily installed into an existing radio. RF clipping also
exihibits substantially more distortion. The VoiceMax installs
easily... and provides tangible results.

Ask for catalogs from the major gear makers (eg. Kenwood, Icom, Yeasu). There are SW receivers made by others (I think you need to check other SWL newsgroups, I don't have the names handy, for other makers eg. Eton, Grundig), and you didn't say whether your hobby is for SWLing or hamming.

> Who do you all trust to buy from?? Thanks.

Most people revolve around price and shipping charges as top priority. As far as I'm concerned, there is the hassle factor if trouble comes you way. You need to ask about return priviledges, proceedures, restocking charges ("tax" on you buying something and then finding that it does not work or you don't like it), and if you can find reviews of the equipments somewhere, and also ask for customer satisfaction reports (I think there is a website [someone who knows this, please step forward] where gear is rated by users, and maybe sellers/resellers, too.).

In my experience, the good stores will tell you if you open the box and the device is dead on arival, you bring the whole thing back and they give you another one. If you can do this AND on the second time around, get them to test the gear right there before you take it out of the store, you're doing even better (actually, I bought a transistor radio once and it was dead in the store, they got me a second one and it was dead, too, and then I was asking for my money back and then they showed me a sign on the wall "all sales final" and that means no refund, and they were willing to settle by giving me a more expensive radio for the same price).

You need to think about all this and remember your questions before you say "deal" and fork over the green.

It also helps to come out and ask the salesguy "what is the dirt" on particular units. I've heard that dead-out-of-the-box situations can be as low as 1-2% or as high as 7% or so, worse for real bad cases.

I'll also allege that a rumor I heard is that Yaesu is worse than average on reliability, but I'll leave it to others to give their opinion. If you want to get the dirt on the brands' relibility, then get on google and look for user groups, support groups, private mailing lists, etc.

I would invite anyone else with privy information about rig reliability to come forth with their opinion(s) on this because somewhre down the road, a given sample population of rigs will develop problems. Many of the early solid-state rigs (including the very expensive ones) can't be repaired at all because chips are no longer available. Then, you have to find someone who knows what they are doing and pray. One guy I know bought a lemon rig, and had to send it back three times to get fixed and it was big bucks, and after the third round he gave up and sold it to someone else for parts. If the rig has a CPU and the CMOS battery is user-replaceable, that is good. Or, if that battery goes dead, does your whole rig become unusable or does it default to a usable state on bootup?

Lots of questions, maybe some other guys can add to this?

Hi Stan,

It appears that I have the same information that you do. A 64 pulse per revolution unit should do the trick, but I am not sure.

What you need is a simple Quadrature shaft encoder, not a gray code encoder.
A Grayhill or an Oak Grisby unit will run you about 30 to 40 dollars.
Nothing special about the one in the JRC unit. I do have an NRD-91
myself...........good receiver.
There is a fellow on eBay that has the manual, along with the schematics in
PDF form for about 20 dollars with a "Buy it Now" option. I bought one from
him a few months back.

Wanted repair parts: JRC NRD-91 � need tuning control and push
buttons . . .

Greetings all,

I am in the process of repairing an old JRC NRD-91 shortwave receiver.

I found that the digital tuning control is bad.

It is a digital �pulser� � I think they call it 2-bit gray code with
50 pulses to the turn. (Not sure about that.)
I also need some of the buttons that are used on the front panel.

Does anyone have any of these parts? Or, has anyone been successful in
retrofitting with a part that I can find.
I am going to try and fix the tuning control. It is cracked at the
place where the leads leave the unit.

I will try to bridge the broken circuit on the control with conductive
epoxy. I will post back how well that works out. But first, I need to
obtain some conductive epoxy.   :-)

Thanks all,

- Stan Shankman (K7SJB)

Actually, if adjusted correctly... no splatter... and 100% constant
modulation.

Hi Alan;
I think Leo opened up a museum in the city where WRL started.
I love looking thru the old monthly magazines just to lookit the ads,
hi!
Licensed in 1960, I remember most & still run vintage stuff which I am
again trying to set-up here in Paradise(florida), hi!

Here is a Nice site>
http://amfone.net/Tech/wrl/PhotoAlbum.htm

The Museum was called the Western Heritage Museum but I cannot find
it. Seems there are more then one museum with that name:-)

Simply The Best !

Look inside any amp on the market

You WILL NOT find a cleaner, more organized box then a FATBOY !!

Precision engineering , Hands down !!

No variable with this amp. picture shows variable pot, But it is NOT with this unit.

If you want less power, turn your radio rf power down, or mic gain down.

Radios will always go into different phases of how they "look. And it's
all in the eyes of the beerholder anyhow.

I just love the look of my IC-761. 50 or so pounds of real man's radio with a BIG freaking knob on it. Booyeah! I also do like the looks of the TS-480. I own one, and it looks and performs just fine.

What's your idea of a good looking radio, or do you just post about what you don't like?

OTOH, I know I'm spouting heresy here, but I don't like the way Collins radios, or HRO's or the old Johnson's look.

The neat thing is if we don't like the way radio's look, we don't have to buy those ones.

You have a problem with the term "ham" in this context?

Please elaborate.

I have a number of 6146s that I know I'll never use in the future and
would like to sell them to someone who will, or wants spares.

All used, many known to be good from prior use or users. Couple in
original boxes. Might be one 6146a, one 6146w. If this is important, let
me know.

$3.00 money order per each, plus postage (USPS).

$2.50 each for all to one buyer.

Respond to the given email address associated with this post (its live but
has spam assasin set up so don't talk too much commercialism or it might
get bombed to /dev/null). If I don't respond in a day, then make a post
responding to this and give your munged email address and I'll get back
to you.

It is well known that "ham" is a derrogatory term meaning unprofessional (cf. "Mickey Mouse"). It comes from the definition of the word (as a verb) which means to excessively overexaggerate. Obviously, I'm not referring to the other meanings: Cuts of meat, or the given name of one of Noah's sons.

Granted that literally, amateur operators must serve without compensation for their services (and thus not reach "professional" status - i.e. paid), the derrogatory meaning doesn't source from that part of the definition. One dictionary (Random House) went further and listed an origin: "Short for 'hamfatter' - from 'The Hamfat Man', a negro minstrel song celebrating an awkward man." Awkward in the 18th Century and earlier is a nice way of what today we would call retarded. The definition came through the years to us today via theater, where "ham" was first applied to unprofessional and unconvincing actors on account of their exaggeration of expression - i.e. "they can't act."

So, basically, calling someone a "ham" is the same as calling them a retard at worst, and at best, acknowledging their irrelevant self-importance in thinking that they know what they're doing (whether they do or not).

--
You asked.

I are a Ham!

Your interpretation of Ham is fine for you, but by no means universal.

Allow a similar case.

Navy Seal's are proud to call themselves Seals, but when some people think of seals, they think of the circus clown animals. Yet the Navy Seals are some of the roughest toughest guys around. If I were a seal, I'd be proud to be called one

I'm a Ham, I'm pleased as punch to be called a Ham.

It isn't a bad actor
It isn't a Piece of pork.

It is a licensed radio amateur.

While we are at it, there are those who find the term "Amateur"
demeaning, as if it is sub par relative of a radio professional. Or that
what we do is Amateurish. Amateur and Amateurish are two completely
different things, although apparently not to some.

How about a new reference name for the service

So what do *you* want to be called?

As for me, I am a Ham, and happy to be called one.

- 73 de Mike N3LI -

That is the adoption of a mascot. Not quite the same thing.

Considering that many "hams" are grossly overweight (at least in my
geographic area), are you certain?

Amateur doesn't have the bad connotation (or as bad) as ham does.

This is a very nice, like new SG-2020 HF transceiver with factory installed ADSP2.

It has CONTINUOUS transmit and receive coverage from 1.8 MHz to 30 MHz.

SSB and CW.

Adjustable power from 1 to 20 watts.

It comes with the protective rubber face liner. The SO-239 coax connector and the power plug are mounted on the chassis (Not on pigtails).

Comes with the Mini-Manual, mic and power cord. Like most of the 2020s this will drift a little when you first turn it on.

This unit has never been mobile. This rig is in Like new condition. There are a couple pin point paint chips on one side, but other then that, I don't think there is a scratch on it.

I am asking $535 with free shipping to the lower 48 states.

I will Guarantee the rig not to be DOA.

I will ship this Worldwide.

If you have any questions, please email me at: kz3dx@yahoo.com

Thanks,

Bill

Yup Larry, they are nice recvrs.
I've had 2-3 over the years but at a time when most you cud get was
$300-$400 each(not that long ago either, hi!)
The Collins 75A-4 still runs rings around it IMHO.
I've got 3 of these still:-)

I have a Yaesu FT-920 with the AM and CW filters installed for sale. I have owned the radio for about 10 years and am a non-smoker. It is in really nice condition and is currently on the air. Asking $875.

If you are interested, please either contact me via email at w5htr@yahoo.com or 'phone me at 972-231-7511.

Thanks, Fred Z.

I'd just as soon not be known at all. I love obscurity. I like to keep it that way in the neighborhood too. My antennas are mostly clandestine in appearance.

Besides, I don't base my self esteem upon what others think of me. At least not when I'm taking my meds.

Ed, NM2K

Lots of people are overweight. something like 60 percent of Americans
are. Interesting logic BTW. We're called Hams, not Pigs. And I'd rather
have an overweight Ham sitting beside me than a condescending one.

Respectfully disagree. I've seen postings and have had many hams tell me
they consider the term amateur condescending. Even seen at least one QST
  mail that said that.

Maybe not. Could be similar to the Hamsexy stuff. Some folks just have insecurities that they have to feed, so they spend their time trying to make their brethern look bad.

Didn't see the Hamsexy folk at Dayton this year. Ya know, they looked just like any other Hams there, I was expecting kewl folk, but no, they were just like the rest of us....

I wouldn't take that as definitive.

All the times I've seen people try to define where the term came from
have never come up with anything absolute.  It's too far back in time.
and nobody recorded the origins at the time.

The point is it doesn't matter, since it was so long ago that the name
ceases to have a connection to it.  It's used because it has been used.

My wife has an old IBM Selectric II typewriter which she keeps in
running condition. She recently had it overhauled and it now smells just
like the old teletype machines I used at the MARS station at Ft.
Monmouth (K2USA/AA2USA) in the late 1960s.

Anybody know the type and brand(s) of lubricants that have that
characteristic odor?

No, but maybe if you ask the typewriter overhauler...  That stuff is
sweet perfume for some of us.

He's a bit of a recluse, so I thought I'd try to avoid annoying him if I
could :-)

Dab a little WD-40 behind your ear.

I thought the distinctive smell came from the ribbon.

I think Michael is correct. Much of the odor came from
the ribbon. Back in the day (loooong ago!) I'd use a
few drops of automotive AT fluid to get a few extra
months out of those ribbons, which were hard to find.

Still have a bunch of UPI and AP print outs from the
1970's made with those funky ribbons on my model 15.
Good times!

Steve

Jeff, my citation was included.  Random House Dictionary; a 1960's version.
Since you know me personally, come over sometime and I'll show it to you.

The hobby has lots of people who are morbidly obese.
(See http://en.wikipedia.org/wiki/Morbid_obesity for definition)

Sadly, many of them die from weight-related causes.  We lose a lot of
nice people and good operators that way.

I have a really nice Yaesu FT-920 for sale with the AM and CW filters
installed . I  have owned the radio for about 10 years and am a non-smoker.
It is in really nice condition and is currently on the air. Asking $800.
Also, a Yaesu LL-7 phone patch included with the 920.

If you are interested, please either contact me via email at w5htr@yahoo.com
or 'phone me at 972-231-7511.
thanks, Fred Z.

    Same meter on eBay for $13.38 shipping included....
http://tinyurl.com/6qrnqk

Shipping does not have to be that high, I bought a cable tester off eBay
that was shipped to me from Hong Kong and the whole thing cost me $6

The picture of the meter he shows on eBay does not look the same as the
Model XL830L meters which I sold, but that does appear to be a very good
price with the shipping from Hong Hong included.

The Motorola "HT's" have been sold.
Thanks to all who expressed interest.

And special thanks go out to all the newsgroup "moaners and whiners",
who helped to promote the sale of these Motorola "HT's"!.

It looks identical to the picture on the pchub site.

Google guesses at 299 hits, then returns 2 pages. It was 67 hits, actually,
2/3rds of them chinese. (your url includes a 50 hits/page specification)
(page 2 was hits 51-67)

I probably got no hits because the fucking idiot had misspelled the
manufacturer's name.

XILE != XIOLE

I had searched for "XILE XL830L" and unsurprisingly, got nothing but
the OP's advertisements.

BTW: when posting a google link, you can leave off all the crap except
for the ?q=<searchstring> part. For example, all you need is:
http://www.google.com/search?q=xl830l

It would be interesting to see how anyone could put these on 2 meters or any
other frequencies for that matter.

Might anyone have a copy of a manual and/or schematic for a PYRAMID PHASE
III REGULATED POWER SUPPLY Model PS-25 -- 0-15VDC & 25 Amps?

Thanks,

Jerry

Hi, anyone know what this thing is and what it's used for:

hakuyo simulator

Front: power "trigger" led, "speed" non calibrated dial (continuously
turns), "range" dial says 1-5

on the back: 3 pin power (flat like uhf cb) - round power 8 pin socket with pins

"200khz"

Any help appreciated

Gary
VK3LCD

It's just cheap Chinese crap.

Go to Tools For Fools (Harbor Freight) and get their cheap $3.00 one.

Anybody have one they don't need???

. This is the internal switching PSU module designed for use in the IC-745, IC-751, IC-751A and IC-970 transceivers (13.8V DC/25A). A variant, with a finned cover, is used in the IC-761 and IC-765. The IC-PS35 has two pigtails; one terminated in an IEC 3-pin mains socket, and the other in a standard 6-pin Molex plug which is inserted in the radio's DC POWER socket. To avoid EMC problems, lead dress should be observed when installing an IC-PS35.

THANKS!!

I got one from e-bay for my spare IC-970. I am looking for the black
gasket that goes between the power supply and the radio chassis. Are
those available?

Hello,

I'm looking for the schematic or service-manual for
the 2m/70cm/23cm handheld Standard C710.

(The Standard C510 schematic / SM is not the same)

Any help would be appreciated.

I need PLL CCI3001 if somone have ? Any info would be helpful because i
didn`t find the chip for sale on the net.

It is used in this radio stations:

Royce 639,582,651,642
Sommerkamp TS-340 ili TS-340 DX
Pace 8093,8193

I don't think these were that numerous or popular enough for anyone to
have digitized the manual but will be interested to see, hi!

Hi all,
I'm considering to upgrade my receiver ICOM R75 with narrow CW filters. My main interest is NDB listening in the LW band.
There are 2 possiblities:
a) ICOM FL101 (CW narrow 9mHz IF, 250Hz) + ICOM FL53A (CW narrow 455kHz, 250Hz)
b) INRAD 121 (CW narrow 9010.6kHz, 250Hz) + INRAD 122 (CW narrow 455kHz, 250Hz)
Which combination is the better one in terms of quality and efficiency.
Price does'nt matter.
Any advice is welcome!
Thanks in advance

D. Kremp

Why? Do you hear more than one signal from adjacent frequencies? Or do you hear broad spectrum noise?

250Hz CW filters are designed to be used by ham radio operators in crowded bands. They often make listening difficult due to "ringing" (noise).

They won't filter out broad spectrum noise because it covers the same frequencies as the signal you want.

You might find that a DSP audio processor will give you better results. It's easy to test, there are lots of DSP audio programs around for PC's, you just record some signals and try it.

You could also ask around the local ham community and see if you can find someone with a similar filter in a receiver that covers the LF bands.

Geoff.

You may want to try using a Timewave DSP Filter. The DSP-59+ can be
had for about $150 US or less and the DSP-599zx for about $300 US. I
had the 599zx for a long time and wish I still had had it. It was a
very good filter.

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.swap (and currently archived at http://www.faqs.org/faqs/radio/swap-guide/):

radio/swap-guide
Subject: Rec.radio.swap FAQ: A Guide to Buying and Selling on Usenet
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 6 Nov 2001 19:25:51 GMT

Posting-Frequency: Monthly

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

Greetings D. Kremp..

Typically, for very narrow CW work, 250 Hz IF filters are a reasonable choice. Many prefer 500 Hz however, if you frequent very crowded band conditions, you may have little alternative but to narrow up the IF as much as possible. Now days, this narrowing has somewhat been alleviated by Digital Signal Processing (DSP) within the IF. Through IF DSP, you [typically] have options to narrow the IF to whatever you desire. Short of DSP technology, IF filtering by way of a crystal filtering elements is the desired choice. An outboard DSP unit connected to your speaker output will not be as effective however, they are great at reducing heterodynes and general band noise. I relate this from using DSP units since their introduction to the amateur services.

A side note..

Regarding:
"a) ICOM FL101 (CW narrow 9mHz IF, 250Hz)"

Somehow, I doubt that they have a 9 millihertz IF. If you're just cutting and pasting this from another source, then be aware of:

Megahertz is defined as MHz, kilohertz as kHz and hertz as Hz. It is, in fact, ALWAYS a capital "H" to pay homage to Mr. Heinrich Hertz. Consider: http://www.ideafinder.com/history/inventors/hertz.htm or, http://searchnetworking.techtarget.com/sDefinition/0,,sid7_gci214263,00.html or, http://tf.nist.gov/timefreq/general/glossary.htm (click on "M" or "J-K" - these folks should know the difference)

Further proof? Take a look at www.fcc.gov and note their frequency references. In addition, simply take a look at a stereo dial, clock radio or even your transistor radio and notice how the manufacturers abbreviate frequency.

Cheers,
Mr. Mentor

| Hi all,
| I'm considering to upgrade my receiver ICOM R75 with narrow CW
filters. My
| main interest is NDB listening in the LW band.
| There are 2 possiblities:
| a) ICOM FL101 (CW narrow 9mHz IF, 250Hz) + ICOM FL53A (CW narrow
455kHz,
| 250Hz)
| b) INRAD 121 (CW narrow 9010.6kHz, 250Hz) + INRAD 122 (CW narrow
455kHz,
| 250Hz)
| Which combination is the better one in terms of quality and
efficiency.
| Price does'nt matter.
| Any advice is welcome!
| Thanks in advance

|
| D. Kremp

Something of a long shot, but someone somewhere might have one. They do not appear to be available from the usual UK sources. [I bought the AR146 without the CTCSS module quite a few years ago, before CTSCC became popular in the UK for repeaters. Due to changing circumstances it was confined to the attic, from where it's been re-discovered and I'd like to get it back into service.]

Alternatively, if someone knows the radio well enough, can anyone tell me the connector type used in the radio into which the CTCSS module is plugged? if I can get the 'other half' I can probably find an alternative CTCSS module to use.

TIA

I'm totally new to amateur radio, so this may seem like a stupid question. Does the typical 2 meter or UHF repeater repeat DTMF tones?

ICOM radios have an optional DTMF Decoder to control squelch, and I was wondering if I could set the frequency to a local repeater and only hear messages when the correct DTMF signal is sent. That way I could use repeaters and still have the privacy like subtones, instead of listening to everything that comes accross the repeater.

But, this cool functionality won't work if repeaters don't repeat DTMF sent to them.

Thanks in advance for you help.

It depends on the repeater controller, most will repeat the DTMF tones, some will regenerate the tones (improving the s/n ratio) and some will strip the tones out. Still others will repeat the tones if you know the correct digit(s) to add as a preamble.

Apparently it is hard to find a manual for these rigs. Maybe someone that has used one can answer my question. How do I power this thing? There is a cinch-jones type connector on the back. I have never used it, is it expecting a DC supply like my old Heathkit, or an AC plug? I guess I can open it up to see if it is converting ac/dc, but if someone has the answer I'd appreciate it.

For One and All,

Need Info on the YK-88S2 IF Filter ? -for- Kenwood R-5000 Receiver
http://groups.yahoo.com/group/kenwood-r5000/message/2115

Also may Want-to-Buy [WTB] a YK-88S2 IF Filter -so-
Does Anyone Have a YK-88S2 IF Filter : For Sale ?

Background : There is another Kenwood IF Filter that
is design for one or more of the Kenwood Transcevers
that is Listed as a YK-88S2.

The YK-88S2 is a standard "Can" Solder-In type Filter
and -only- and needs to be mounted on the Dash-One (-1)
"Plug-In" Filter Circuit Boards used by Kenwood in some
of their Transcivers and the R-5000 Receiver.

The YK-88S2 Filter can be used by swapped-it-out with

an existing Filter that is mounted on the Circuit Board
of the Drop-In Filter for the Kenwood R-5000 Receiver.

IIRC - The YK-88S2 is designed to work on 8.83 MHz and
has the same size and circuit characteristis as the
other Filters designed for the Kenwood R-5000 Receiver.

Reference Link/URL for the YK-88S2 Filter
http://jg1xlv.jp-au.net/yk88s2.htm

My reading of the Numbers for the YK-88S2 Filter :
The -6 dB Bandwidth would be 3 kHz (2x1.5)
The -20 dB Bandwidth would be 3.8 kHz (2x1.9)
The -60 dB Bandwidth would be 5.5 kHz (2x2.75)
http://jg1xlv.jp-au.net/yk88s2-spec.htm

Now comparison this to the KY-88A-1 Filter
The -6 dB Bandwidth would be 6.0 kHz
The -20 dB Bandwidth would be ?.? kHz
The -60 dB Bandwidth would be 11 kHz

My Conclusion is that the Kenwood YK-88S2 (3.0 kHz)
would appear to be usable as a Very-Wide SSB IF Filter
-and/or- a Very-Narrow AM/MW IF Filter
http://jg1xlv.jp-au.net/yk88s2-spec.htm

The reason for this posting is -if- the Standard Solder-in
IF Filter Board Mounted of the Kenwood R-5000 Receiver
will take a Kenwood YK-88S2 IF Filter : It should -but-
has anyone had a problem ? ? ? ? ?

=IF= The Kenwood YK-88S2 IF Filter is a Drop-in-Fit
-then- I would like to configure a Kenwood R-5000
Receiver with the following Filters :
1st IF Filter = YK88-A1 - AM 6 kHz for Wide AM
2nd IF Filter = YK88S2 - AM 3 kHz for Narrow AM
3rd IF Filter = YK88S-1 - SSB 2.4 kHz for Very Narrow AM
This Receiver would be "Set-Up" specifically for Shortwave
Radio Broadcast Program Listening and not for Amateur
Radio SSB Reception.

Once Again - Two Questions :

1 - Has anyone any more information on the Kenwood
{ Trio } YK88S2 IF Filter ?

# 2 - Has anyone any used the Kenwood { Trio } YK88S2
IF Filter in any Rigs ?

some say - i would if i could . . .
-while- i simply say 'kenwood' ~ RHF
.

I asked for space #3246 back in Feb. But they lost the mail.  Will
pick up package Thursday AM and hope it is the one requested.  However
I will be there, somewhere with the following stuff:
     Kenwood  TS-820 HF Transceiver  w/ Operator & Service Manual
     Kenwood MC-50 Desk Microphone MFJ-941E  Antenna Tuner

     MFJ-941E  Antenna Tuner
     MFJ-1702B  Two Position Coax Switch
     PALOMAR 300A  Amateur Band Bi-Linear Amplifier
     Astatic D-104 microphone with Stand that has dual PTT bars
And other stuff        Sonny,  K4WYS

Hi all,
I am looking for a QPA-4000 and ACC-2000 for programming the Maxon or
Midland data radio's.

If you have these for sell please contact me at.....

j.mail66 "at" verizon.net

Thanks,
Rod
KD0XX

I found Kenwood filters for my old TS-440S at International Radio 13620 Tyee
```

Road Umpqua OR for a reasonable price. I tried the more conventional sources such PartsStore.com but even though they listed the filters they were discontinued.

The old radios from the late 80s through the mid-90s are hard to get parts for sometimes.

The only draw back to ones from International were they were not direct replacement, they were mounted pn a circuit board mounted to my IF board with some double sticky foam tape. The orignal filters were hard to find without buying them off eBay as a used item for a premium price.

Good luck, the filter do make a big difference, my Kenwood is used as a beater radio for our club Field Day and other outdoor events. The operators last year raved at how clear the SSB signals were over the previous FD.

73,

Homer

If you REALLY need one and can't find one anywhere else, I can
order a new one, and will sell it to you for List Price.

Most mute the transmitter audio when the first tone in the string is detected. This prevents the tone from being repeated and disturbing all the other users and for security. Some have a command option to allow tones to pass. You really need to be asking the system owner about this. It is normally not allowed except to those who know well the system capabilities and the issues to look out for.

You aren't the first to find that the repeater that works the best, often talks and talks and talks....

As an aside, the selective calling "features" are usually worthless for ham radio. They are there as sales gimmicks, and because these radios are sold in some countries for commercial radios. I have an idea that the engineers may not have as much operating experience. They often come up with neat ideas with glaring problems in actual operation. Ham radio is usually a poor substitute for other services. I.E. If you didn't get the call, was it because you weren't listening or because you were out of range of the extremely expensive wide area network? If you need selective calling, get a cell phone. If you need fleet dispatch, get radios that last all day on a charge and don't need to be within 6" of your ear to hear. If you like to mess around with radios and try different things, You ARE a ham. Have fun.

Thanks for asking the question. We need more like you. We should all seek to learn from the mistakes and triumphs of those who went before.

What were you trying to do?

The R-5000 has four filter slots with designated R5000 filters giving 6khz (YK88a optional), 4khz (YK88S), 1.8khz (YK88SN optional) and CW (two filters available).

YK88S2 might make sense in filter position 2 if it fits and if a really narrow AM filter was needed. YK88S1 would appear to largely duplicate the YK88SN filter and I doubt any noticable benefit would be gained in that swap.

I've got the full complement of optional R5000 filters and find them to be a good mix of widths. Nice to see that something else is available though.

Yes, you are right...meant to type 2.4 but only the 4 got transferred
to screen.

You mention NDB's... note that NDB's are not the usual CW (carrier
interrupted), but are instead AM stations broadcasting the tones of
400 or 1020 Hz. To receive these in AM mode, you'd need bandwidths of
800 Hz and 2040 Hz respectively.

If you're really interested in NDB's and "true" LW activity, a PC
sound card and a waterfall-type graphical program will set you
furthest ahead.

Thanks Bruce. RFwiz.com has a cable for $43.00 but I don't
know if it will work with the DOS based software. (ACC900)
The software they sell is Windows based but I hate to buy the software
if
I don't really need it. Although it might be the cheaper route.
Let me know how much getting it from you would cost.

Thanks,
Rod

You're correct about all US domestic NDBs.

There still are NDBs elsewhere that transmit a unmodulated carrier most
of the time and then switch to on/off keyed morse ident periodically.

Such systems require a BFO to hear the morse ident.

Even 'modern' airborne ADFs still have a BFO mode... some things never die.

Bob

After many years, my KLM Force5 HF transceiver has come home. Unfortinately,
the manual didn't come back.
Can anyone can tell me what year(s) these were manufactured? I have looked
for a manual copy from the usual sources but have yet to find one. If anyone
knows of a commercial reprint source for the manual or has a manual they
could copy, please let me know. Any help is greatly appreciated. Thanks -
Larrt

Hi everybody,
just a line to inform that a new yahoogroup has been created, devoted to
the new Yaesu VX-8R.. you can find it at:

http://groups.yahoo.com/group/VX_8R/

Please feel free to join !
73,

Mike

Out of curiosity, is this a marine SSB transceiver used that you've adapted for ham use? Is KLM the same company that made the 2-meter/10-meter OSCAR transceiver?

I have a vague memory, now that it's been brought up, of a rig in the late
seventies or early eighties that came under the KLM label.  Kind of=20
```

squarish, and what I see in my mind isn't a photo, but a drawing.

It may turn out to be some other rig, if I felt like looking.

I always thought KLM was more of an importer, finding neat Japanese
equipment and putting their own badge on it. Not unlike what Drake did
when it brought over the TR-22, or when Henry Radio brought over Trio
equipment.

KLM was known for VHF and UHF antennas (and maybe preamps?) before
they started bringing over transceivers, and when they started
doing that, it seemed a logical extension, it being a period when
the US manufacturers were fading (so the VHF gear was gone or mostly
gone, all those Swan 250s and the Drake TR-6, and such) but before
the Japanese companies really took off in the US (the exception being
2m FM rigs, and the rigs made there but rebadged by US companies), so
they neither offered transverters or VHF transceivers.

At least the early offerings from KLM circa 1975 were odd little rigs.
Left you wondering why there was something so specific yet none of
the rigs seemed to come from an existing line of ham equipment. So SBE
had a six meter rig briefly circa 1972 or so, that seemed to be a modified
CB SSB set (I recall 23 channels and it was synthesized). I think=20
KLM later imported the 432 variant of that rig. Clegg had a
220 rig that had a tuneable receiver, and if I remember properly was
good for both FM and AM.

We never really heard anything about those rigs before they were
imported.

And later, they faded, instead all the Japanese manufacturers making
equipment that matched the rest of their line.

I have a different understanding. Hz is written with a capital H not to pay homage to Mr. Heinrich Hertz, but more simply because all measurement units begin with a capital letter.

Homage was instead paid to Mr Kelvin when they decided that the capital K is assigned to the temperature measurement unit (kelvin degree) instead than to the

1000 multiplier. This explains why kilohertz is written with a small k, an exception to the general rule that all multipliers have a capital lettere (kHz, MHz, GHz, THz).

Of course, if we're nitpicking, there's no such thing as kilocycles and
megacycles.  They always needed the "per second" attached to them in order
to have meaning, since otherwise you'd not know what time period the
million or thousand cyles appeared in.

When Hertz was brought in as a replacement, the ambiguity went away
since Hertz mean "cycle per second".

That contradicts units like the gram (g, kg, mg), the meter (m, cm, mm,
km) the liter/litre (l, ml), the second (sec, msec)... or at least how
they are presented in all my science texts, and...

> Homage was instead paid to Mr Kelvin when they decided that the capital
> K is assigned to the temperature measurement unit (kelvin degree)
> instead than to the 1000 multiplier.

...Fahrenheit (F), Rankin (R), Henry (H, mH), Farad (F, pF, nF), Volta
(V), Ampere (A), Gauss (G, mG), Tesla (T), Watt (W, mW, kW, MW)...

> This explains why kilohertz is

...deci (d), centi (c), milli (m), nano (n), pico (p), femto (f), atto (a),

Am I missing your sarcasm?

Although, I frequently (almost always) see 'million' prefixed by 'm' by
the news media in headlines, like 'XYZ Liable for $10m' A liability of
ten cents isn't a big news item. In my opinion.

My old TS430 had the solder-in filters.  The newer TS-690 (450) has
plug-in filters.  I understood that the only difference between older
and newer YK-88 series filters was the circuit board, denoted by the -1
suffix.

So, if you need a solder-in YK-88SN for example, you should be able to
unsolder the filter from the YK-88SN-1 circuit board and use that.  Are
there some matching components on the circuit board that I missed?

My Yaesu VX-7R can pick up the NOAA weather channels and has some kind of WX Alert in the set up menu. How do you use the "WX Alert"? It doesn't seem to make any difference whether it's on or off. The manual doesn't go into any detail about this feature.

I would like to have the WX audio muted until there is a warning. Can this be done????

I was referring to all the measurement units that bear the name of a scientist.
Those units all begin with a capital letter

 >> Homage was instead paid to Mr Kelvin when they decided that the capital
>> K is assigned to the temperature measurement unit (kelvin degree) instead
>> than to the 1000 multiplier.

> ...Fahrenheit (F), Rankin (R), Henry (H, mH), Farad (F, pF, nF), Volta (V),
> Ampere (A), Gauss (G, mG), Tesla (T), Watt (W, mW, kW, MW)...

Your examples confirms that all measurement units bearing the name of a
scientist begin with a capital letter. The homage to Kelvin consists in the fact
that his name was given to the temperature measurement unit even though the
letter K had already been reserved for the 1,000 multiplier. So, the 1,000
multiplier was renamed from K to k, and the K was given to the temperature
measurement

>> This explains why kilohertz is written with a small k, an exception to the
>> general rule that all multipliers have a capital lettere  (kHz, MHz, GHz,
>> THz).
>
> ...deci (d), centi (c), milli (m), nano (n), pico (p), femto (f), atto (a),
>
The ones you mention are not multipliers (i.e. 1,000, 1,000,000, etc,) but
sub-multipliers (i.e. 0.001, 0.000001, etc) . The general rule is that
multipliers have a capital letter, the sub-multipliers have a small letter

> Am I missing your sarcasm?

You must have missed it, because I am always quite serious and never sarcastic.

Hello group,

I'm looking for hints to identify the following CW key:

  http://hb9egm.bram.ch.eu.org/pub/key.png

It has no inscription, and I'm curious to know where it comes from. Has anyone seen something like that? Where could I look for information?

Hello and thanks for the read.
KLM made this HF transceiver labelled Force5 in 1977; 10-80 meters, fully synthesized & all solid state. I found their ad on page 147 of December 1977 QST Magazine.
They offered the matching Power Supply/Speaker and also their Matching Base Station Console (PhonePatch/VU Meter/VOX/CW/24 HourDigitalClock/10minute timer). I would like to hear from anyone who has one or both of these units, especially if they would be for sale.
The only way to find 'em is to ask.
Larry

Tnx OM, Already been there - G6FIB's CTCSS module will work fine, but
I need the ADI connector's mating half to interface it to the radio.

I'm running a Dell Latitude 2.8GHZ Laptop with 256MB RAM and Windows
XP PRO. My rig is a Kenwood TS-140S.

I purchased a Buxcomm Rascal interface to connect the laptop sound
card to the rig so I could try PSK31. Since the interface has a
serial connection, I use a USB to Serial interface in order to connect
it to the PC. It's connected to the rig via 13 pin DIN connection on

the back, with audio in/out through the headphone/MIC connectors on the laptop.

Here's the problem. When I transmit, there's alot of noise being transmitted which I think comes from the laptop power supply. I came to that conclusion because when I run the laptop on batteries, the noise isn't there. In fact, if I boot down the laptop and leave it plugged into an outlet, if I connect the serial connector from the interface to the USB/Serial adapter connected to the laptop and push either the Send or the PTT on the microphone, that noise is transmitted. I can tell by the way the ALC meter is moving. It's like the noise is being transmitted into the rig via the cable which connects the rig to the interface. This didn't happen the first day I used the interface, but it started happening the day after.

I'm interested in ideas of what could be causing this and possible remedies. All help is appreciated.

Thanks.

Priz

Wanted repair parts: JRC NRD-91 =96 need tuning control and push buttons . . .

Greetings all,

I am in the process of repairing an old JRC NRD-91 shortwave receiver.

I found that the digital tuning control is bad.

It is a digital =93pulser=94 =96 I think they call it 2-bit gray code with
50 pulses to the turn. (Not sure about that.)
I also need some of the buttons that are used on the front panel.

Does anyone have any of these parts? Or, has anyone been successful in
retrofitting with a part that I can find.
I am going to try and fix the tuning control. It is cracked at the
place where the leads leave the unit.

I will try to bridge the broken circuit on the control with conductive
epoxy. I will post back how well that works out. But first, I need to
obtain some conductive epoxy.   :-)

Thanks all,

- Stan Shankman (K7SJB)

Matthias-

It may be a home-made key.  If that is true, you aren't likely to find
any further information unless it was built from a magazine article.

MrPace-

JB is correct. Although some may not, a repeater will commonly
filter-out received sub-audible tones. If a transmitted tone is needed,
it would normally be re-generated in the repeater transmitter.

This is the only way to ensure that the repeater transmits a good tone,
rather than repeating one that may be at the wrong level or slightly off
frequency. (It also provides an opportunity for the repeater to
transmit a different tone than it receives.)

  Why are almost all the new HF ham radios so ugly?  HF Ham radios use
to be a thing of beauty, but now most of them are butt ugly!

Icom Radios all look like oversized Palm Pilots

Kenwood HF Radios - What where they thinking?
  TS-480? - Yuck! I would not want that thing on my desk.
  TS-2000 - Deaf, poor selectivity, and ugly.

Ok.  The Yaesu FT-2000 is nice looking, but according to EHam.net
reviews there are issues with the AGC popping, and the 3 kHz roofing
```

filter actually being wider than the 6 kHz roofing filter. I'm
holding out for future fixes on this one.

Yaesu FT-950 -mildly ugly
Yaesu FT-897D - really ugly
Yaesu FT-857D - compact and ugly
Yaesu FT-817ND - Looks like it has warts on it's face
Yaseu FT-450 - Pretty ugly

TenTecOrion II and Omni VII - Oversized Palm Pilots.

Now the Kenwood TS-940 was a good looking radio.
The Drake TR-7 was nice looking.
The Yaesu FT-980 was sharp looking.
The Yaesu FT-1000d was nice looking
The TenTec Omni VI was nice looking.

The same thing happened to component stereo systems. In the 1970s and
1980s they were gorgeous, but now they are ugly black metal boxes.
What happened to the radio equipment that you could display proudly
for everyone to see instead of something so ugly even the owner does
not want to look at it?

General rule, but there's other exceptions too: h (hecto) for 100, da
(deca) for 10. In fact the multipliers for 10, 100, and 1000 all use
lowercase letters - how's that for another general rule for ya!

> > Am I missing your sarcasm?

stic.

It's a little bombastic to come across setting up all sorts of rules
and then have those who work in industries point out all the
exceptions.

Tim.

It's very possible to be a thing of beauty and be butt ugly.

I personally am not a big fan of the TR-7, FT-980, FT-1000D, other
"black" radios.

I actually like the HW-100, R-390A, etc., but I've always claimed
green to be my favorite color :-). Having a big metal panel up front
with knobs etc. is good.

But my favorite of all, by a very large margin, are the Heathkit
Mohawk and Marauder. Huge chrome knobs, big green panel.

You think "huge chrome knobs" will get filtered out by any anti-porn
filters? :-).

Tim.

But their whole line at that point had big chrome knobs. There was that VHF AM transceiver, I can't remember if it was only 2meters or included 6 meters, that had a tuneable reciver and tuneable transmitter. I remember one article decades later that basically said "this is a thing of beauty, it's also completely useless at this point" right before he described how to convert it to FM.

I seem to recall, but can't remember their names, that there was even a mobile pair for HF, though I'm sure it was AM.

There was also a six meter phasing SSB rig in that chrome era.

Even their first transistorized portable shorwave receiver, circa 1961, I think was part of the chrome wave.

Heath tended to redo their line every so many years, the technical specs not changing that much while the external looks did. The chrome SSB design was the same basic design for the SB line that followed.

For Sale:

ICOM IC-28A   2 Meter FM Transceiver

Features include:

21 Memories
Automatic Dimmer
Compact=20
Simple Ergonomic Design
Subaudible (CTCSS) Tone Encoder
Dual Scanning (Frequency Scan & Memory Scan)
Backlit LCD
Sensitive & Selective Double-Conversion Receiver=20
Receives 138-174 MHz
Icom HM-14 Electret Condensor Hand Mic w/ scan, tt pad included=20
Output Power: 25 Watts High, 5 Watts Low

Includes the original Icom Manual
Rig is very clean, works very well
(an lcd display bulb is burned out)

Price is $ 65.00 plus $ 5.50 for USPS Priority Mail Insured Shipping
(to Cont'l U.S. address only), payable by USPS Postal Money Order=20
only.

Thank you.

I once fabricated one using a brass keeper from an RC airplane linkage
kit. It's the part that secures the cable to a servo arm.  You might
also subscribe to the yahoo heathkit newsgroup.  There are lots of posts
in there.   73's   Mike K8MB

For Sale ---

I have a pair of exceptionally clean Motorola Spirit (Model MV24CVS)
VHF Handhelds ("HT's"), with the (2) Motorola Desk Chargers for sale.

Features of these reliable Motorola handheld units include:

- Both are 4 Channel VHF models - 4 channels easily switchable using channel selector switch on top of=20 each "HT". Other external controls include volume and squelch controls

- Both units include their Motorola VHF "duckie" antennas

- Both units include good NiMh battery packs=20

- Both units include their Motorola desktop "cradle" chargers=20 (with plug-in wall transformers and charging indicator lights)

Easy programming instructions are located on the inside of both=20
unit's battery covers, making programming simple and convenient.
Range of these rugged reliable handhelds is approximately 5 miles.

Will sell for $100.00 plus actual shipping and insurance charges=20
(Cont'l U.S.), payable by USPS Postal Money Order only.

Thanks & 73,

-Bill

Hi,
If a rig is being supplied from a DC source, what would you expect if that supply was only giving the minimum specified voltage for the rig. Would you expect full rated output power or would you only expect that at the nominal supply voltage?
E.g. the IC746PRO is rated at 100W. The nominal supply is 13.8V +/-15%
The manual does not state what the power out is at the lower limit.
What have others measured?

Alan

Most ham rigs (and many more "12 volt devices") are specified to put out
the designed power at 13.8 volts.   This is a nominal voltage of a car with
the moror running. Any less voltage and you usually get lower output and at
a higher voltage you may get slightly more output.

There are always minor virations in the power output at the same voltage
from differant rigs of the same type. Most have a way of adjusting the
power output to a small degree to bring them back to the nominal power.

I have an Optimus PRO-X44AV Speaker for sale;
it's never been removed from it's original box and=20
original packing material.

Specs for this Speaker are:

Color:  Black
Frequency Response:  90 - 20,000 Hz
Power Handling:           50 Watts (RMS)
Maximum Power:         100 Watts
Impedance:                  8 Ohms
Speaker Complement:  4 Inch High Compliance Woofer and
                                   1 Inch Extended Range, High =
Compliance
                                   Soft Dome Tweeter
Dimensions (HWD):       7 7/8 x 4 1/2 x 4 3/8 Inches
Weight:                        4 lbs 14 oz

This speaker can be used as part of a home theatre system,
or as an excellent quality hamshack speaker.  It's heavy, so
figure shipping based upon the actual cost to ship 5 pounds.

Will sell this never opened, never used speaker for $ 20 plus
the actual cost of shipping a 5 pound package via USPS.

Thanks,

-Bill

This is what I suspected but it was suggested to me that rigs are
designed with a good margin of power in mind so that they will give
rated output at the lower end of the supply voltage range.

I just fixed up an IC746PRO and found that at 13.2V, I only got 70W
instead of 100W. Then I found a drop of 1.3V in the factory supplied
leads (4m long). Shorter leads put this up to 80W but still short of the
rated output. I run all my radios on batteries and don't have a proper
13.8V supply so I don't know if the 746 is working to spec or not.

Alan

news:NY5Dj.5756$4q3.875@trndny02...

  I have a very high quality Fluke Model 23 Series III Digital=20
  Multi-Meter for sale.

  This meter originally sold for over $200, and is in like-new=20
  condition, complete with original, unopened Fluke manual. =20

  Specs and further info about the Fluke Model 23 Series III
  can be found at:

  http://www.tequipment.net/FlukeDigital23Multimeter.html

  Will sell for a USPS Postal Money Order for $ 80.00.
  Price includes shipping via USPS Priority Mail, Insured,
  to Continental U.S. address only.

  Thank you,

  -Bill

Anyone have a adapter/charger for the Fluke 97 scopemeter that they want
to sell?  Or an optical output or other accessories?
Power adapter Part No. is PM8907/003, I assume that there are several
different
versions.
Thanks

For Sale: In MINT condition and never used, a BatterySaver solar panel charger. Solar Cell: Amorphous Silicon. 100 mA at 14.5 volts

Two adapters: one adapter plugs into the panel and connects to a car cigarette lighter. The other plugs into the panel and clips directly to the battery.

Blocking diode. Red indicator lamp tells you if improper connection has been made. (Light goes out upon proper connection.)

$24.95 and $7.95 shipping and Delivery Confirmation/USPS. Can do PayPal or can do a Visa/Mastercard through my ham radio business.

does anyone know what allen wrench or torx key or whatever it is that
you need in order to remove the VFO knob from these radios? my whole
VFO assembly is loose and Im thinking that I will find out once I get
that knob off.

thanks
AF

I have a problem with xtal stability in a tune circuit. I know what
the fault is but I can not work out the faulty capacitor code no the
Sch diagram it is 10p/CH I know it is 10 pico farads or puff but I do
not understand the CH all I can find out is that C is possible �
0.25pF but what is the H for?

Its a metric allen wrench. Sorry I don't remember the size but a
standard metric allen wrench set should have it.

For Sale ---

I have a pair of exceptionally clean Motorola Spirit (Model MV24CVS) VHF Handhelds ("HT's"), with (2) Motorola Desk Chargers for sale.

Features of these reliable Motorola handheld units include:

- Both are 4 Channel VHF models - 4 channels easily switchable using channel selector switch on top of=20 each "HT". Other external controls include volume and squelch controls

- Both units include their Motorola VHF "duckie" antennas

- Both units include good NiMh battery packs=20

- Both units include their Motorola desktop "cradle" chargers=20 (with plug-in wall transformers and charging indicator lights)

Easy programming instructions are located on the inside of both=20 unit's battery covers, making programming simple and convenient. Range of these rugged handhelds is approximately 5 miles.

I've reduced the price for these exceptionally clean Motorola "HT's" to $ 100.00, and that includes shipping (Cont'l U.S. only). Excellent value, don't miss out on these great VHF "HT's" !

Payment by USPS Postal Money Order only, please, for immediate shipment.

Thanks & 73,

-Bill

I have an Electro-Voice Model 729 SR ceramic cardioid microphone,
with push-to-talk switch, and heavy-duty E-V desktop base for sale.

The mike is presently wired with a 3-conductor, 1/4" phone plug; the
color of the mike and base are both gray.  All in very good condition. =20

$ 17.50 plus $ 5.00 shipping (Cont'l U.S. only).

A picture (.jpg format) is available upon request.

Thanks & 73,

I'm looking for a 2 Meter mobile rig with the following features:

Will power down automatically when the car ignition is turned off.

Will power up automatically when the car ignition is turned back on.

If in Scan mode when ignition is turned off, will power back up in Scan mode when the ignition is turned back on.

BTW, this is for an old car that has a discrete ignition line.

Anything out there that will work like this?

The icom 2720H mobile rig works in this manor but it is like most new
rigs....
full of menus   has 23 buttons on the handmic and dual speaker output for
external speakers but not enough info to connect them up and icom was
a bunch of Aholes when I ask for a drawing so I could connect the speakers.
Had to take apart the radio to figure out the wiring on a basic function.
the rig is a 2m 440 but I have no idea if the newer 2820 works that way.
Also it was not documented that the 2720 will do full crossband repeat
and in my case the power needs to remain on with the car off so I can
crossband from my handheld through the 2720 to a repeater for a
convenient longer distance contact while outside the car.
Good luck.   No particular recommendation. Just letting you know
it is out there. Will continue to scan after being off. But big gripe is
that there is no easy way to set a skip when the scan keeps locking up
on a frequency.   Have to wade through menus to get that done and
not practical driving down the road.

good .luck   73 K4TWO   Gary

ex Kokomo WB9SMX   cheers

Hello and thanks for the read.

My eBay special KWM-380 is close to being fixed after finding the finals were out because someone opened the ALC up and it was overdriven to 150 watts.

I would like to find a Kiron board for less than what Surplus Sales wants for theirs. Maybe someone bought one & never istalled it or??? If you can help, please contact me direct.

Unforunately, you have no idea of the situation on the ground here. It is petty to vote for someone other than Mr. Romney soley since he said that we do not need the hams. He is quite correct. He never made a disparaging remark about any hams. The Chronicle interviewer was unable to make any concrete point to challenge Mr. Romney's assertation.

Mr. Romney never engaged in such vitrol.

I would caution you to refrain from making such statements.

I know of no valid reason they'd put CH on a capacitor value...
Are you sure the CH isn't HC... HC is a type of xtal package? Could

they be implying that the xtal involved requires a load capacitance of 10pF?

Hi,

the front panel of the TM-455E UHF transciever I have here sometimes shuts off, and the panel buttons stop working, but the transciever doesn't stop completely and all microphone buttons work (PTT, vfo-mr...). I even think it'd be possible to have a QSO.

The power button is on the front panel, so it's impossible to shut off or power on the TX when the panel fails.

I suppose there's a problem with the front panel, because sometimes the LCD displays an incomplete screen (I've seen it show the right frequency, but without punctuation nor other symbols, or nothing at all, or all segments half-on). Most of the time, it blanks completely.

Touching the PCB of the front panel has an influence on the behaviour (mainly creating the problem, seldom making it work again), but I couldn't find any specific component causing trouble. I've also checked for bad solder points, but couldn't find any.

At first, I suspected the cable between the TX and the front panel was at fault, but moving it doesn't change anything. I will have to check with another cable anyway.

I'd be thankful for any hints or advice.

Matthias HB9EGM

I have the following microphones for sale:

1 -  Electro-Voice Model 729 SR Ceramic Cardioid microphone,
      with push-to-talk switch, and heavy-duty E-V desktop base.
      This was a very popular ham mike which was sold by such
      ham gear manufacturers as Drake and Ten Tec, for use with
      their various ham rigs. This mike is presently wired with a=20
      3-conductor, 1/4" phone plug; the color of the mike and base
      are gray. In very good condition. A picture (.jpg format) of the
      E-V Model 729SR mike is available upon request.=20
      $ 15.00 plus $ 5.00 shipping (Cont'l U.S. only).

1 -  Electro-Voice Model 631B Omnidirectional Dynamic microphone,
      with E-V holder for attachment to a desk or floor mike stand.=20
      Color: chrome. This mike uses a standard "XLR" type mike cable=20
      connector. In very good to excellent condition.=20
      $ 15.00 plus $ 5.00 shipping (Cont'l U.S. only)

1 -  Electro-Voice Model N/D 257 Cardioid Dynamic microphone,
      uses a standard "XLR" type mike cable connector.=20
      Color: black. In excellent condition.
      $ 15.00 plus $ 5.00 shipping (Cont'l U.S. only).

Thanks & 73,

-Bill

In copier work, this occurs sometimes. It's usually a cracked trace on the board, that when pressed or thermally expanded, it drops out. It can also happen when the board moves a bit, and touches a little of the metal frame, causing it to ground out. I hope that you find the problem without too much grief.

Hi Tim,

thanks for the info, that seems quite possible, but it's difficult to find
because it's difficult to see.

I am sure you will try the obvious to look with your eyes for broken or pinched parts, tighten grounds, re-seat plugs and clean off any oxidization.

From time to time I have had to troubleshoot equipment with partially intermittent components or circuits. Freeze spray is sometimes recommended, however I find freeze spray is not easily localized and instead causes moisture to short out other sensitive circuits leading to mis-diagnosis.

What you might first try, is to use artist's paint brushes of various stiffness to probe the various components until the intermittent one is found.

Secondly, if you do isolate an affected circuit schematically, but not physically, you can use a trick I have used which is to use a small AC coupled audio amplifier across the circuit to ground (biased either by operating voltage or Ohmmeter) and listen for a micro-phonic affect as you move the affected parts.

I have a receiver with some ferrite tuning coils in the IF. In the process of retuning, attempting to peak the IF, I cracked coils in two cans and they are locked into place. They are in same position from original and the receiver seems fine, makes sensitivity etc. Is there any measurable change to the inductor Q or other parameter when this occurs? I did get replacements but the effort to replace seems difficult.

For Sale ---

I have a pair of exceptionally clean Motorola Spirit (Model MV24CVS)
VHF Handhelds  ("HT's"), with the (2) Motorola Desk Chargers for sale.

Features of these reliable Motorola handheld units include:

    * Both are 4 Channel VHF models - 4 channels easily
      switchable using channel selector switch on top of=20
      each "HT".  Other external controls include volume
      and squelch controls

    * Both units include their Motorola VHF "duckie" antennas

    * Both units include good NiMh battery packs=20

    * Both units include their Motorola desktop "cradle" chargers=20
      (with plug-in wall transformers and charging indicator lights)

Easy programming instructions are located on the inside of both=20
unit's battery covers, making programming simple and convenient.
Range of these rugged reliable handhelds is approximately  5 miles.

Will sell for $100.00 plus the actual shipping charges (to Cont'l U.S.),
payable by USPS Postal Money Order only.

Thanks & 73,

-Bill

Hi
 I've been trying to contact  Kiwa Electronics, http://www.kiwa.com/
 503 7th. Ave. N.E. ,Kasson, MN 55944  (kiwa@wolfenet.com)  for a couple of
```

days without any success.
Craig uses to answer the mails very rapidly. There is no information on his website abt holidays at the moment.
Did anybody get in contact with this company this week?
Dom
Normandy/France

The Drake SW-2 has been sold.
I never had a single problem with the receiver,
nor any problems with it's rotary encoder,

This is my first radio purchase so I have a few questions. I have a friend that swears by the ICOM IC-w32a. I've looked at it and it does seem like a pretty robust radio. Heck, it must be if ICOM put it back into production after stopping once before.

But, I'm interested in knowing if there are others out there with the same capabilities. I'm really interested in the fact that it can xmit on 440MHz and received on 70 cm, at least I think it can, since I want to use this for talking over satellites.

Any ideas about other radios I should look at would be most appreciated.

Thanks.

-brad w.

Isn't 440MHz and 70cm the same band? What's the big deal in that?

oops... you're right..

I meant to say 2m/440 MHz..

Does anyone have these, or can tell me where to find them? I find references to the transformer, but nothing about the wiring codes.

TIA

They are very popular with satellite operators, due to the full duplex capability. Currently if you want full duplex, not just split band operation, your only real choice is the Kenwood TH-7, which has a lot of APRS functions as well.

Xref: g2news1.google.com rec.radio.amateur.equipment:14179

This is the ICOM AH-4 Auto Antenna Tuner with a 23 foot (minimum
recommended length) long wire antenna kit included.

The AH-4 is in excellent condition and comes with the stainless steel mounting brackets, instructions, and adapter sheet with instructions for using the AH-4 with any HF transceiver including Kenwood, Yaesu, TenTec, etc., as well as marine and commercial radios.

The frequency range of the Auto-Tuner is continuous from 3.5 MHz to 54 MHz. (80 meters through 6 meters)

The 23 foot long wire antenna kit has a little over 23 feet of #12 BLACK stranded wire, a crimp connector of the tuner and a real porcelain insulator for the far end of the long wire. THIS IS THE PERFECT SETUP FOR ANTENNA RESTRICTED AREAS.

The price is $222.50 plus $14.95 shipping

Money order or PayPal.

I have only one of these units.

If you are interested, please email me at: kz3dx at yahoo dot com

Thanks,

Bill

So I looked at the Kenwood Th-D7A like you mentioned. I noticed the
manual says it's not capable of doing less than 438 Mhz.

Is this a hard rule with this device? Because a lot of the satellites
that I want to work are a little bit less than this. Like AO-51 which
has a downlink of 435.300 MHz.

As I've said, this is my first radio purchase so I just want to make
sure it will do what I want.

Any help is most appreciated.

According the the QST reviews of both the TH-D7A (Aug 1999) and the

TH-D7A(G) (Apr 2008) the transmitter frequency coverage as measured in
their lab is 430-450 MHz. Kenwood shows 438-450 MHz for both of them.

Just to verify the above, I set my TH-D7A(G) at 430 MHz and checked
the output against my HP frequency counter. No problem transmitting
at that frequency. I also verified that 430 is the bottom of the
range.

Hello, I'm curious as to what you would like to get out of the SX-73,
you can email me back at alandoss@hotmail.com  Thanks 73 Alan.

Does anyone have any experience with changing the batteries in a FT-530 pack? Mine are all FNB-27's 12v 1100mAh packs. Also has anyone seen any long lasting packs for the IC-T90A?

Hi Andy, Did you get the data you wanted? If not then drop me a line and I
can forward the full circuit diagram and the alignment data (electrical and
mechanical) from the maunal.

For Sale ---

I have a pair of exceptionally clean Motorola Spirit (Model MV24CVS)
VHF Handhelds ("HT's"), with (2) Motorola Desk Chargers for sale.

Features of these reliable Motorola handheld units include:

* Both are 4 Channel VHF models - 4 channels easily switchable using channel selector switch on top of each "HT". Other external controls include volume and squelch controls

* Both units include their Motorola VHF "duckie" antennas

- Both units include good NiMh battery packs

- Both units include their Motorola desktop "cradle" chargers (with plug-in wall transformers and charging indicator lights)

Ideal for "point-to-point" communications use by anyone, or for emergency and emergency preparedness radio communications.

Easy programming instructions are located on the inside of both unit's battery covers, making programming simple and convenient.
Range of these rugged handhelds is approximately 5 miles.

Includes a complete copy of the Motorola "owners manual" for these radios (written in easy-to-understand, non-technical language).

$ 100.00 plus $ 7.50 for Insured Prioriity Mail shipping, with Delivery Confirmation (Cont'l U.S. only).

An excellent value ... don't miss out on these great VHF "HT's" !

Payment by USPS Postal Money Order only, please, for immediate shipment.

Thanks & 73,

-Bill

For sale: Viking Johnson Ranger

I bought it at a hamfest a number of years ago ('03?) when I was phasing into retirement and thinking of doing some kind of a restoration and had partial success with this. However, I have gravitated to a different kind of retirement ham hobby activity: total or almost total homebrewing. Thus, I'd like to find a new home for this Ranger.

Caveats: It has some major internal problems, The guy before the guy I bought it from had totally torn out all of the CW circuitry. Also, the modulator was converted from 2x1614s to a pair of 2E26s. The modulation transformer is unknown, hermetically sealed (black pot), and of a brand name I've never heard of, and larger than the original, AND located on the opposite side of the chassis. This guy also converted the speech amplifier to a big mess and a phase inverter driver for the 2E26s. Also, as part of this job, he tore out the 5V4 (?) and left the 5R4 thus making it all 500-550 vdc and no low voltage. To get low voltage (for VFO and 6CL6s) he used power resistors in series with low voltage load and connected the top to the high voltage supply. He also moved the VR tube to where the crystal socket was. The power transformer and large choke seem like the original.

At the time I aquired the rig, the electrolytic was dry (hum on carrier looke like 30% on a scope). I made a kludge repair on that and drove the 2E26s with an outboard hi-fi amp and actually had the rig on the air in several AM contacts on 160 and 75. The VFO does not jump frequency (I had this problem on an earlier Ranger many years ago) during or after warm-up, at least to the extent that I monitored this. I have observed a spur coming sometimes from the 6146 driver (in standby, swishing through the driver tune knob, get a herterodyne in a receiver).

My own mods included two mini-toggle switches near the function switch (which needs cleaning and oil). The meter is OK, but the meter switch needs cleaning, too. I added a DPDT relay run off the 110 vac as part of a plan to change the manner of control of standby to transmit and back. Off the back panel I've added banana jacks for certain outside "port" connections, and one of those European-type female chassis plugs (three prong) that you see everywhere now for AC-in. I also tore out the power line filter (caps to ground & series inductances [I've gotten mild shocks off all of this old gear that put those things in under the 'old ways' GMPs, but I think they are basically useless]). The cabinet cosmetics are probably, IIRC, closest to "very good" in terms of few scratches/wear and barely any rust or corrosion anywhere (except some on some surfaces of the transformers/chokes).

There may be some other minor issues but I can't think of them just now.

So, you could look at this as a restoration to a less-than-original state or a spare-parts source. I paid $200 for this, but I paid too much. I guess its worth $50, now, and I think I don't want to ship it. I'm in southern Delaware and not in a hurry to get rid of it but would like to free up some space in my hamshack and get it into someone's hands who is wants to do the restoration I was going for (just AM capability), or whatever. So, I'm willing to drive one way about up to one hour in any direction to some "half-way" point away from my home. Manual reproduction comes with. There is also a Georgetown, DE hamfest on April 12, here (at Sussex Tech HS), and could meet someone there, too.

If you are interested then email me and tell me your story (in case there is more than one person interested who can meet me within my one hour driving radius of Georgetown, DE). Respond to the email address originating from this post, but if I don't answer within 2 days, make a followup post and give your email address in that post (I have spam filters but simple email usually does get through).

W4PON

FNB-27   Carefully crack the weld all the way around, slit through the label, pry with screwdriver from the bottom between the pack inside and the plastic wall. beware of shorts and sparks. The pack is usually glued with silicon or monkey snot to the sides. If you don't screw up the top rails all should be well. New pack can be sandwiched with a little silicone cement to the sides. Don't worry about the cracked welds.

For Sale:

I have a pair of exceptionally clean Motorola Spirit (Model MV24CVS) VHF "Handy-Talkies" ("HT's"), with two matching Motorola Desk Chargers for sale. Seldom will you find any used Motorola equipment in such "clean" condition as these VHF handheld units are.

Features of these Motorola handheld VHF radios include:

* Both are rugged and reliable Motorola 4 Channel VHF models; both are 4 channel units, with channels easily programmed and easily selected using the channel selector switch on the top of each "HT". No other equipment whatsoever is needed to program the frquency or the "privacy tones" used by these units.

* Both units are "self-contained", with built-in microphones and built-in speakers; nothing else is needed. Units are "ready to go" the moment you receive them. Operation couldn't be simpler, so even a young child can operate these units easily. A copy of the complete owner's guide, which includes all usage and programming instructions in "non-technical" English, is included

* Other external controls include a volume and a squelch control, as well as jacks for connection of an external microphone and an external earphone, if desired

- Both units include their Motorola VHF "duckie" antennas

- Both units include good rechargeable NiMh battery packs

- Additional rechargeable NiMh battery packs readily available for these units at very reasonable prices

- Both units include their Motorola desktop "cradle" chargers (with plug-in wall transformers and charging indicator lights)

- Each of the 4 channels allows selection of a user-programmable tone for channel "privacy"

- Two of the 4 programmed frequencies in each of these two "ht's" are "MURS" frequencies, which require no FCC license whatsoever

- These units are ideal fo personal and family communications, sucn as for communicating from work or school to home, use when shopping, camping, road trips, group trips, etc. They're also ideal units for emergency local communications use for emergency preparedness use

Very simple programming instructions are located on the inside of both unit's battery covers, making programming simple and convenient. They can be programmed easily without the need for any other equipment; these "ht's" have a synthesized "voice" that tells you the frequencies as you step through each of them while programming frequency and "privacy" tone for each of the 4 channels. The range of of these rugged and reliable handheld units is approximately 5 miles (depending upon terrain).

Will sell for $100.00 plus the actual shipping charges (to Cont'l U.S.), payable by USPS Postal Money Order only.

Thanks & 73,

-Bill

I have several brand new (still in their factory sealed packages) SMA male to BNC female adaptors. These are very high quality adaptors with gold-plated center conductor contacts.

Typically, these adaptors are used for adapting the small female SMA connector found on many modern handie-talkies, to a BNC female connection ... so that you can then connect any antenna that uses a BNC (male) connector to your "ht".

Digital photos (.jpg format) of these high quality SMA male to BNC female adaptors are available upon request.

$ 5.50 each, includes USPS First Class shipping to any U.S. address.

Thank you,

-Bill

For Sale - Best Offer

*** 40 Meter Crystals ***

All 5 crystals are in FT-243 holders
Some can also be used on 15 meters
(multiply the crystal frequency by 3)

1-	7073.333 Khz	JAN Crystal
1-	7075 Khz	JAN Crystal
1-	7094 Khz	Texas Crystal
1-	7100 Khz	JAN Crystal
1-	7125 Khz	JAN Crystal

There is a modest "reserve" on these crystals, so they won't be given away for "peanuts". <g> But if you're interested in buying them, make a reasonable offer and they may be yours at a reasonable price if your offer is the best offer received by me in the next week.

Be sure to specify if you want First Class Mail or Priority Mail shipping (U.S. only). Your choice, so include shipping charges in your offer ... let me know how you want the crystals shipped.

Make your best offer (including shipping) on these 5 crystals today! Best offer (above the "reserve") received gets 'em; in case more than one identical offer is received within the next week, the first offer (above the reserve) received get's em.

So much for eBay! <g>

Thanks & 73,

-Bill

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

I have an absolutely beautiful classic Electro-Voice Model 664 Microphone for sale.

This dynamic cardioid microphone can be used as either a high-impedance (Hi-Z) or a low impedance (Low-Z) microphone, and is the nicest E-V 664 I've ever seen! It's satin chrome finish is in excellent condition throughout;
the mike looks almost just like new, with no sign of any "pitting" or tarnishing
so commonly seen on many chrome microphones. This one is a true gem.

This mike was used in a small church which upgarded their sound system. It includes a nice cast Atlas Sound Corporation desk stand for the mike, and a 15 foot shielded microphone cable with a 4-pin connector on one end (which matches the 4-pin jack on the E-V 664 mike), and a standard 3-pin "XLR" connector on the other end.

If you've been looking for a really nice, really clean E-V 664 for your shack,
or for use with an auditorium sound system, you're not likely to find a nicer
one than this beautiful E-V 664 microphone.

I'll be glad to send you complete specs for the E-V 664 microphone (in Adobe .pdf file format) and pictures of the E-V 664 mike (in .jpg file format) upon request.

Price for this E-V 664 microphone, with the Atlas Sound desk stand and
the shielded mike cable with connectors, is a firm $ 100.00. plus $ 12.00
for Priority Mail Insured shipping to your door anywhere in the Continental
U.S. (only). Payment to be by USPS Postal Money Order only, please.

Thanks,

-Bill

For Sale:

1- Digital Multimeter, with blue backlight, Brand New in the box

This is an excellent quality digital multimeter with more features than the most popular digital multimeters on the market today!

Specs are as follows:

Handheld Digital Multimeter for measuring AC and DC voltage, DC current,
Resistance, Diode and PNP and NPN Transistor Tester
Bright Blue Backlight - very easy to read large digital display
Thick yellow rubber casing protects meter from splashes and bumps
Test Leads and 9V Battery are included
Low power requirement with automatic power off
Data hold function
Continuity beeper

Measurement Specifications:

DC Voltage: 200mV/2V/20V/200V �0.5%, 600V �0.8%
AC Voltage: 200V/600V �1.2%

DC Current: 200?A/2mA/20mA �1%, 200mA �1.5%, 10A �3%
Resistance: 200?/2K?/20K?/200K?/2M? �0.8%
Display: LCD, 1999 counts
Fuse protection: F-200mA/250V
Operating Temperature: -0C to 40C
Overrange Indication: Only figure "1" on the display
Polarity Indication: "-" displayed for negative polarity
Low Battery Indication: - /+ display
Flip-out stand angles meter for ease of use in any location
Battery: 9V, Included
Dimensions: 138mm x 69mm x 31mm
Weight: ~160g

Brand New in the box, includes:

1 - Digital Multimeter with Backlight
1 - Instruction Manual
1 - Set of Test Leads
1 - 9V Battery

Photo (.jpg format) available upon request.

$ 25.00 plus $ 6.00 shipping (Cont'l U.S. only)

Hello All,

One year ago, I made the NB6GC / KO6NO Remote Adapters for the RF-350 and RT-1446 available. Thanks to all the RF-350 owners who purchased adapters and eproms during the year, I am down to only four assembled and tested units and don't plan to assemble any more. I am now going to offer the eleven remaining circuit boards and parts as kits. If you don't mind soldering, you can build your own adapter for $30. Visit my web page www.ko6no.com to place orders. Thank you all and 73.

```

I want to buy a Begali Simplex MONO Single Paddle Key.

This is the MONO Key...NOT THE IAMBIC.

I prefer the palladium plated base but will consider the gold.

If you have one available, please email me at - kz3dx at yahoo.com

Thanks,

Bill

For Sale:

I have a pair of exceptionally nice Motorola Spirit (Model MV24CVS) VHF "Handy-Talkies" ("HT's") with 2 matching Motorola Desk Chargers for sale.

Seldom will you find any used Motorola equipment in such "clean" condition as these VHF handheld units.

Features of these Motorola handheld VHF radios include:

⋆ Both are rugged and reliable Motorola 4 Channel VHF models; Channels are easily programmed and easily selected using the channel selector switch on the top of each unit

⋆ Both units are "self-contained", with built-in microphones and built-in speakers; nothing else is needed. Units are "ready to go" the moment you receive them. Operation couldn't be simpler, so even a young child can operate these units easily. A copy of the complete owner's guide, which includes all usage and programming instructions in "non-technical" English, is included

⋆ Other external controls include a volume and a squelch control, as well as jacks for connection of an external microphone and an external earphone, if desired

⋆ Both units include their Motorola VHF "duckie" antennas

⋆ Both units include good rechargeable NiMh battery packs

⋆ Additional rechargeable NiMh battery packs are readily available for these units at very reasonable prices

⋆ Both units include their Motorola desktop "cradle" chargers (with plug-in wall transformers and charging indicator lights)

⋆ Each of the 4 channels allows selection of a user-programmable tone for channel "privacy"

⋆ Two of the 4 programmed frequencies in each of these two "ht's" are "MURS" frequencies, which require no FCC license whatsoever

⋆ These units are ideal fo personal and family communications, such as for communicating from work or school to home, use when shopping, camping, road trips, group trips, etc. They're also ideal units for emergency local communications use and for emergency preparedness use

Very simple programming instructions are located on the inside of both unit's battery covers, making programming simple and convenient. They

can be programmed easily without the need for any other equipment;
these "ht's" have a synthesized "voice" that tells you the frequencies as
you step through each of them while programming frequency and "privacy"
tone for each of the 4 channels. The range of of these rugged and reliable
handheld units is approximately 5 miles (depending upon terrain).

Will sell for $100.00 plus actual shipping charges (to Cont'l U.S.).
Payable by USPS Postal Money Order only, please.

Thanks & 73,

-Bill

Take a look at the Collins radio NOS and some used radio parts at:

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZheytubeguy

Have a few others coming later as well. Need to get rid of this stuff
as

a move in the near future. 73 Heytubeguy

I don't have the Article but I've had a few of these great amps.
Tube availability is a problem & expensive(8875 x 2)
Small footprint, easy to drive to legal limit+.
Early models covered 10 meters, the MLA-2500A did not & need heavy mod
to do so.
There are articles to change the tubes to russian, cheaper types.
Full metering, dual speed fan, a real nice amp IMHO.

For Sale:

I have a pair of exceptionally clean Motorola Spirit (Model MV24CVS) VHF "Handy-Talkies" ("HT's"), with two matching Motorola Desk Chargers for sale. Seldom will you find any used Motorola equipment in such "clean" condition as these VHF handheld units.

Features include:

- Both are rugged and reliable Motorola 4 Channel VHF models; both are 4 channel units, with channels easily programmed and easily selected using the channel selector switch on the top of each "HT". No other equipment whatsoever is needed to program the frquency or the "privacy tones" used by these units.

- Both units are "self-contained", with built-in microphones and built-in speakers; nothing else is needed. Units are "ready to go" the moment you receive them. Operation couldn't be simpler, so even a young child can operate these units easily. A copy of the complete owner's guide, which includes all usage and programming instructions in "non-technical" English, is included

- Other external controls include a volume and a squelch control, as well as jacks for connection of an external microphone and an external earphone, if desired

- Both units include their Motorola VHF "duckie" antennas

- Both units include good rechargeable NiMh battery packs

- Additional rechargeable NiMh battery packs readily available for these units at very reasonable prices

- Both units include their Motorola desktop "cradle" chargers (with plug-in wall transformers and charging indicator lights)

- Each of the 4 channels allows selection of a user-programmable tone for channel "privacy"

* Two of the 4 programmed frequencies in each of these two
"ht's" are "MURS" frequencies, which require no FCC license
whatsoever

* These units are ideal fo personal and family communications,
sucn as for communicating from work or school to home, use
when shopping, camping, road trips, group trips, etc. They're
also ideal units for emergency local communications use for
emergency preparedness use

Very simple programming instructions are located on the inside of both
unit's battery covers, making programming simple and convenient. They
can be programmed easily without the need for any other equipment;
these "ht's" have a synthesized "voice" that tells you the frequencies as
you step through each of them while programming frequency and "privacy"
tone for each of the 4 channels. The range of of these rugged and reliable
handheld units is approximately 5 miles (depending upon terrain).

Will sell for $100.00 plus the actual shipping charges (to Cont'l U.S.),
payable by USPS Postal Money Order only, please.

Thanks & 73,

-Bill

I still have a few new (still in their factory sealed packages) SMA male to BNC female adaptors for sale. These high quality adaptors were made for Motorola. and have gold-plated center conductor contacts.

Typically, these adaptors are used for adapting the small female SMA connector found on many modern handheld "HT's", to a BNC female connection ... so that you can then connect any antenna using a BNC (male) connector to your "HT".

Photos (.jpg format) of these high quality SMA male to BNC female adaptors are available upon request.

$ 5.75 each, while they last, includes USPS First Class shipping to any U.S. address.

Thank you,

-Bill

I have one high quality Digital Multimeter, with easy-read blue backlight, still left for sale.

This is an excellent quality digital multimeter, brand new still in the box, with more features than most popular digital multimeters on the market today!

Specs are as follows:

Handheld Digital Multimeter for measuring AC and DC voltage, DC current, Resistance, Diode and PNP and NPN Transistor Tester
Bright Blue Backlight - very easy to read large digital display
Thick yellow rubber casing protects meter from splashes and bumps
Test Leads and 9V Battery are included
Low power requirement with automatic power off
Data hold function
Continuity beeper

Measurement Specifications:

DC Voltage: 200mV/2V/20V/200V �0.5%, 600V �0.8%
AC Voltage: 200V/600V �1.2%
DC Current: 200?A/2mA/20mA �1%, 200mA �1.5%, 10A �3%
Resistance: 200?/2K?/20K?/200K?/2M? �0.8%
Display: LCD, 1999 counts
Fuse protection: F-200mA/250V
Operating Temperature: -0C to 40C
Overrange Indication: Only figure "1" on the display
Polarity Indication: "-" displayed for negative polarity
Low Battery Indication: - /+ display
Flip-out stand angles meter for ease of use in any location
Battery: 9V, Included
Dimensions: 138mm x 69mm x 31mm
Weight: ~160g

Meter is brand new in the box, and includes:

1 - Digital Multimeter with Backlight
1 - Instruction Manual

1 - Set of Test Leads
1 - 9V Battery

Photo (.jpg format) available upon request.

This is an exceptional value in a high quality digital multimeter, ideal for electronic troubleshooting and repair work, available for only $ 25.00 plus $ 6.00 shipping (Cont'l U.S. only).

It was in the March 1978 issue reviewed by Rusgrove, Jay, W1VD, if that
helps.
The ARRL's online archives go back only to 1980...

Makes me wonder. I keep reading the words "high quality" and "exceptional value," but the fact that nowhere do you give a brand or a model, makes me REALLY skeptical...

Here's a slightly better meter with all the same features for
$15. It has a 1000V range and data hold.

I was also skeptical, until I used this meter and compared it's features,
it's quality, and it's measurement accuracy with my Fluke Model 23
Series III digital multimeter, and my Tektronix Model DMM247 digital
multimeter.

I'm no longer skeptical. You may wish to try one yourself in order to
form an informed opinion.

WHAT IS THE MAKE AND MODEL? As long as you fail to include
this minimal information, it is just a junk of chinese noname garbage.

Hint: we don't believe you when you say it is better than a fluke.
And BTW, its specs suck. 1% to 6% accuracy? Give me a break. It might as
well be a 2 digit meter. Reminds me a sinclair LED meter from the 70's.
The last digit is just noise.

What you choose to believe appears to be based upon an uninformed
opinion (unless you've personally tested and evaluated this meter, and
compared features,quality, and price with either a Fluke or a Tektronix
multimeter).

In order to formulate an informed opinion, rather than spewing forth an
uninformed opinion as you have, the make of this meter is XILE, and the
Model is XL830L. It is not a Fluke or a Tektronix meter, nor is it's price
that of a Fluke or a Tektronix multimeter.

Where do you see specs that say "1% to 6% accuracy"? Those were not
the specs given, as anyone with reasonable intelligence can clearly see.
What have you been smoking ... ? <g>

The last of these multimeters has been sold.
Thank you to those who inquired about it.

I'd also like to thank "AZ Nomad" for your opinions
(uninformed and inaccurate as they may have been),
and for your help in the sale of this last meter.

There don't appear to be any accuracy specs whatsoever given for this
"slightly better meter" which you cite. Have you compared the accuracy
of the two meters to substantiate your opinion ?

I've seen this ad for a long time now. I've ignored it because I am not
in the U.S. and therefore would not buy them, but I've wondered what
frequencies they operate on.

IMHO if they operate on a ham band, then you should say so to stimulate
interest, and if they don't find a more appropriate group.

It's specs say that this "slightly better meter" does not have auto
power-off.
The specs also show (at the bottom) that this "slightly better meter" has a
measurement range up to 600 Volts, both AC and DC. The specs for this
"slightly better meter" give no meter accuracy figures whatsoever.

So specifically what makes the meter you cite a "slightly better meter"
(other than you're saying it's a "slightly better meter")?   Have you tried
one of these "slightly better meters"? Does it's low cost (for fewer
features) make it a "slightly better meter" ?

Oh, when you add in the lowest shipping charges for that "slightly better
meter", it's actual delivered cost isn't all that much different from the
meter
(with more features) which you've never seen, never used, never tested,
know nothing about ... the meter which you're "really skeptical" of.

Back to whatever it is you're smoking ... <g>

That wasn't so hard. Why did didn't you post it in the first place,
or in the second place, or in the third place?

If you've read the ad you've seen that these "HT's" operate on VHF MURS
frequencies, they are also capable of operation on the 2 meter ham band.

If you've read the ad you've also seen that they are being offered for sale
only within the Continental United States (so this ad would be of no
interest
to you). This newsgroup is, IMHO, an appropriate place for this ad, Geoff.
If you don't wish to see any particular item in any newsgroup, you may wish
to learn to use newsreader filters.

I didn't realize that you were familiar with the brand "XILE", or with their
"XILE Model XL830L" multimeter. But since you asked, I answered your
question promptly, and properly.

Interestingly, the XILE Model XL830L multimeter is also "CE Certified".

"CE" stands for "Conformit� Europ�enne" which is French for "European Conformity". When the "CE" symbol is affixed to a product (as it is to the XILE Model XL830L multimeter) it is the manufacturer's declaration that the product conforms to the essential requirements of all European directives.
These essential requirements would include Safety, public health, Electro-magnetic Compatibility, and consumer protection, among other things.

But you're probably familiar enough with the XILE Model XL830L multimeter to have known that it's CE Certified.

We just received another 40 Full Keypad models - very good shape.
Capable of operating in the Ham Band. $179 each with charger, antenna,
and new battery. Thanks

Huh?

You posted this to rec.radio.swap, and to rec.radio.amateur.equipment.

The former is for buy and sell ads, the latter is for the discussion
of amateur radio equipment.

rec.radio.amateur.equipment is not for ads, it never was and still isn't.
Jut because some fools think it is does not make it so.

I don't recall seeing any mention of amateur radio in the original post,
so I certainly wondered why it was here, rec.radio.amateur.equipment,
not even simply because it was an ad but because it didn't really
seem to be even amateur radio related.

Uh...Bill. I've also seen the ad umpteen times. Certain authorities--as well as common knowledge--define insanity as doing the same thing over and over, expecting a different result. If they're the same set of radios, why don't you do something else to enhance their saleability.

If you have a whole slew of them, maybe offer a volume discount.

Either way, it is tiresome to see the same post time and time again (eight times, since December?). I've got a set of these--UHF, though--and while they're okay little boxes, they're a bit limited in flexibility. If I wanted to get rid of them I'd probably price them a bit lower...or put them on eBay, where they used to go for more than you're asking...but where a set with extra batteries, two headsets and two hand mics sold just last week for $103.50. eBay Item # 160226774548 -- and they take PayPal.

jak

Are you interested in buying these Motorola VHF radios, Jak, or is there some specific reason why you chose to add (yet another) message to two "rec.radio" newsgroups rather than simply send it via e-mail?

I believe I once saw a car just like yours sell somewhere for less than yours, Jak. Perhaps you too may benefit from learning to use filters in your newsreader client.

Sorry I must have missed the announcement that the Newsgroup Police appointed Newsgroup Policemen. Congratulations on your appointment, Sir.

The Motorola VHF Handhelds, by the way, remain for sale for the stated price. If you have some you'd like to get rid of, you may want to price them
a bit lower, or perhaps put them on eBay (where they're commonly seen to go in the $200 range, often with few if any accessories included).

Regards,

-Bill

I got some hits for XILE on the chinese crap importation websites.
Nothing for that meter, unsurprisingly.

    He told me I needed a better search engine. There are no results on
any search I used other than his posts.

Selling for $18. I sure wish I could find somebody who could charge me
$25 instead. I'd be able to get that special feeling of pride that comes
from having spent too much.

Up for sale is a Globe Chief 90a CW rig.

This rig was used by my father until he passed away and now I have it.
It is in good shape with some minor wear. It powers up but that's as
far as Ive been able to get into testing it.
I will accept all "Reasonable" offers.

Thank you all and god bless.

Carl.

Thank you for generating so much interest; it looks like I'll now have to at least double my reorder for more of these multimeters.

Did you happen to see what they charge to ship one multimeter from Singapore to the U.S.? Their lowest shipping rate shown for that meter shipped to the U.S. is $ 16.05 for "Speedpost" Standard Air Courier, with delivery in 7 to 12 business days.

So let's see, they charge you $ 18.52 for the meter, and $ 16.05 to ship it from SIngapore to the U.S., with delivery in 7 to 12 business days, with no mention anywhere of any package tracking from Singapore.

Seems to me your total cost from them is $ 34.57 .... which is $ 3.57 more than your total cost would have been from me, with Priority Mail shipping, including Delivery Confirmation and a tracking number, and delivery to any U.S. address within 2 -3 business days.

Do the math, then let me know how many meters you'd like to order before I place my next order. With the sudden popularity of this meter, I'll even offer the very same percentage "quantity discount" they're offering, plus, I'll discount shipping charges on multiple units shipped to you at the same time.

How many would you like to order?

You've found somebody ... if you're able to read and do basic math (see
my previous post regarding the shipping charges they charge you to ship
that meter to you from Singapore) ... then tell us who's offering the lowest
delivered price.

JUST tell ICM the final frequencies (Transmit or Receive) you need and the
Specific Radio ---
they have all of the mixing formulas on file!!!

I am thinking you need to order the receive crystals in the 45 mhz range.

```
They may be in the 15 mhz range, but operate on the third overtone.

They specify the frequency as (Frcv - 10.7)/9
Maybe the specified AT cut ensures the correct
third overtone.

Hi
Does anyone have any info pinout etc on the now defunct   synth chip
used in the the frg7700
MB8718 .I allready have full circuit diagrams for the frg7700 but need
more specific info on this chip
Regards
Ron Priest

For an IC-22A they would be filed as clay tablets. HI!HI!

(I still have an IC-22A. Makes a good workshop monitor.)
(I even added an extra wafer to the switch and am using a 'progammable'
(tone encoder [replacing its DIP switchs] for various repeater pairs.

I always use the telephone !
I order from ICM at least 6 times each year -- friendly staff.

Due to the large volumes of junk mail thesse days --

not as relaible for quick busienss responses.

I have a pair of exceptionally clean Motorola Spirit (Model MV24CVS)
VHF Handhelds  ("HT's"), with the (2) Motorola Desk Chargers for sale.

Features of these reliable Motorola handheld units include:

    * Both are 4 Channel VHF models - 4 channels easily
      switchable using channel selector switch on top of=20
      each "HT".  Other external controls include volume
      and squelch controls

    * Both units include their Motorola VHF "duckie" antennas

    * Both units include good NiMh battery packs=20

    * Both units include their Motorola desktop "cradle" chargers=20
      (with plug-in wall transformers and charging indicator lights)

Easy programming instructions are located on the inside of both=20
unit's battery covers, making programming simple and convenient.
Range of these rugged handhelds is approximately 5 miles.

$100.00 plus actual shipping and insurance charges (Cont'l U.S.),=20
payable by USPS Postal Money Order only.

Thanks & 73,

-Bill

I have an Icom IC-28A  2 Meter FM Transceiver for sale.

Features of the IC-28A include:

21 memories
Automatic lcd display dimming for ambient light conditions
Compact size, with simple-to-operate ergonomic design
Ideal for mobile or fixed station, simplex or repeater use
Subaudible (CTCSS) tone encoder built-in
Dual scanning (frequency scan or memory scan)
Backlit, easy-to-read lcd display
Sensitive & selective double-conversion receiver=20
Receives 138-174 Mhz
Icom HM-14 electret condensor hand mic w/ scan & tt pad included=20
Output power: 25 watts high, 5 watts low

Includes the original Icom manual
Rig is very clean, works very well
(an lcd display bulb is burned out)

Price is $ 75.00 (firm) plus $ 5.00 for USPS Priority Mail
Insured Shipping (to Cont'l U.S. addresses only), payable=20
by USPS Postal Money Order only.

Thank you.

Hi all from Ken, G4KIR,

I have both the 1.8KHz and 1.9KHz filters for sale.

Type No's are..............455khz if  1.8khz wide No....FL222
                                    9.0115khz 1.9khz wide No....FL223

These filters are only six months old ( bought for an ICOM-R75, but never
fitted ).

I will only sell as a pair.......PRICE for the two....�80.00

Please contact me direct, thank you for your time, 'cheers and beers', Ken,
G4KIR.

Anyone know where I can dig up at least three Motorola MRF-587 RF transistors? They are discontinued, so not available from the usual sources (Mouser, RF Parts, etc.). They're still out there, but the closest I've come is One Component Source at $27.50 each with a 25 piece minimum order. Any help would be greatly appreciated. They're for the preamplifier stage of an EIN 503L 3-Watt 40db broadband amplifier.

For Sale: MFJ-403P portable electronic keyer in MINT condition. Used
for only a half a dozen contacts, if that many. (I'm just a straight
key kinda guy.)
Half price. Retails for $79.95. I'll part with it for $39.95 plus
$5.95 towards the shipping and insurance.
Battery, original box and instructions. I can accept Paypal, M.O. or
credit card through my ham radio business. First e-mail gets it!

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

For Sale: Wm. M. Nye Co. high quality straight key.
It's never been used, so it's in just like new condition.

The key's description, from the Wm. N. Nye Co. website reads:

"The Classic Rectangular Speed-X Keys. These Speed-X keys feature a cast rectangular base with black crinkle finish, square section key lever, and a large "Navy" style knob. Contacts are gold-plated heavy silver, and the key action is fully adjustable."
* Model 320-001 Rectangular key, nickel hardware, $ 64.95

I'll sell this key for $ 25.00 plus $ 5.00 for shipping (U.S. only).

If interested, I can send you a (.jpg) picture of this high quality=20
straight key.

Tnx & 73,

-Bill

For Sale ---

I have a pair of exceptionally clean Motorola Spirit (Model MV24CVS)
VHF Handhelds  ("HT's"), with the (2) Motorola Desk Chargers for sale.

Features of these reliable Motorola handheld units include:

    * Both are 4 Channel VHF models - 4 channels easily
      switchable using channel selector switch on top of=20
      each "HT".  Other external controls include volume
      and squelch controls

    * Both units include their Motorola VHF "duckie" antennas

    * Both units include good NiMh battery packs=20

    * Both units include their Motorola desktop "cradle" chargers=20
      (with plug-in wall transformers and charging indicator lights)

Easy programming instructions are located on the inside of both=20
unit's battery covers, making programming simple and convenient.
Range of these rugged handhelds is approximately 5 miles.
```

Will sell for $100.00 plus actual shipping and insurance charges=20
(Cont'l U.S.), payable by USPS Postal Money Order only.

Thanks & 73,

-Bill

Ref Nylon Spiral Follower pn 266-74

I have a heathkit SB101 and the upper dial doesn't move. It seems the Nylon Spiral Follower is worn out or broken. Does anyone happen to have one of these followers or have any success in fabricating a replacement?

Any help would be greatly appreciated!!!

Hey no problem with delay.

Just wanted to let you know I understand that some companies keep thier
heads up
thier rears, so it's ok with me if they leave them there.

Just wanted you to know I just completed an order for a KW amp and tuner
from another manufaturer and that any future purchases will not include any
icom equipment. And if any of my current icoms fail, I'll just run over them
with my car and haul them to the dump.

Have a nice day.   And shove your service manuals.

Sir,

Sorry for the delay, I have discussed with my manager and my technical
support department and have decided that our policy for manuals will be
upheld. From the information I have gathered, it has been nearly 20 years
since we included schematic break downs with our radios. Unfortunately, if
you would like copies of the schematic breakdown from these new radios, you
will have to purchase the complete service manual at $32.00 each plus
shipping and handling. If you would like to order these items, please
contact us at 800-346-0495.

Thanks,

Brian Tobin

Am I being told I have to BUY a service manual to get the schematics for radios I bought?

If this is the case then I will NOT be purchasing a PW1 this year.

All I need are the schematics that should have been with the radios.

Please let me know if the schematics for the 91AD and the 2720H are available online.

My station is about done now except for the ground radials for my Hustler 5BTV.

I move slower these days but plan to just play radion when the radials and HF amp are in.

Read the original message please.   This has been most disapointing.

If I have to BUY the schematics, my HF amp will be a tube Ameritron that already has the

schematics online.

Thanks Gary Calvert 73 K4TWO

Good Morning......

Thanks for your e-mail.

I have attached schematics for the PS-125 and the SM-20 to this e-mail, however, for the schematics for the 91AD and the 2720H, you will need to contact our parts department, because schematics are only available in the service manuals and our parts department handles those. Their e-mail address is: parts@icomamerica.com or their telephone number is: 800-306-1356. I hope that this will help.

Best Regards;

Conversation: Request from Icom America Website
Subject: Request from Icom America Website

This past year I have bought the Icom 91/AD sn 0502054 and Icom 2720 sn 0510376 Icom 756ProIII sn 3204248 Icom PS125 sn 0208384 and SM20 Desk mic sn 028004 all work fine with the following exceptions. The PS125 had plastic rattling around inside from capacitors but I never saw any damage... empty and put back together. The desk mic SM 20 intermitant ground or loose wire in plug. easier and cheaper to fix it myself. I was about to wire external speakers to the 2720 rig and did NOT find enough information to wire the 1/8th inch plugs which ever has 3 wire or both I don't know. The only products that had a schematic was the 756ProIII. Can I be e-mailed the schematics for all the other products or mailed by postal service to Gary Calvert K4TWO, 202 Clarksville TN 37042. I hope when I get the PW1 this summer to complete my new station that it will have a schematic with it. I buy through Ham Radio Outlet and they said not to send in the warrenty cards so they could make quick exchanges if needed.
I am disabled so these things take me a longer time to put into service and find problems.

Thanks Gary Calvert K4TWO

You might check with RTO Electronics. I have dealt with them in the past
for Heathkit transceiver repairs. Their website is located at this URL
http://www.rtoham.com/
There are also several other repair folks out there for Heathkit gear.

```

Hi,

does any one have constructive comments about this type of aerial?

http://www.bwantennas.com/ama/fdipole.ama.htm

How would it compare against a dipole dedicated to a specific frequency for instance? I assume not as well, but how much less?

All sensible replies much appreciated, thank you.

But then you can make one with about 10 minutes of effort using a drill
press or a lathe.

I have used folded dipoles quite a bit in my QRP days. I used heavier
300 ohm TV twin-lead, and went through a 4-1 balun. The folded dipoles
have wider bandwidth. So you won't need to re-tune the antenna as often
if you are scanning from one side of the band to another.
I once had a 15 meter folded dipole that loaded up on all. 80-10 meter
bands. But the lose was too great on 40 and 80 meters. The long
feed-line is why it did load up on the bottom bands. Running QRP I did
work DX with it on 20 meters up to 10 meters.
The full wave loop, and the folded dipoles are my favorite antennas!

It's nice and quite. Great for urban hams. It matches very well on all bands if you have a radio with a built in tuner. I would recommend this antenna over anything else if you had but room for one antenna.

I use 1/4 fiberglass rods for the spreaders but the two end spreaders are 1/2 PVC. The flying terminating resistor was the hard part. I used 450ohm feed line at the feed point instead of flying the balum to keep the center of the antenna light as there was already too much weight in the center from the flying load resistor. If your not running more than 100 watts, you can use a smaller resistor.

hope this helps!

From an old QST review, the 3-30 Mhz B&W terminated dipole was two
S-units down, on receiving, on 40 meters compared to a resonant 40
meter dipole. On 20 and 15 meters, the 40 meter dipole still worked
better. Only on 10 meters did the B&W design work better.

You can find more than you want to know about this kind of antenna, as well as comments about it good and evil, if you google for T2FD which means tilted, terminated folded dipole.

I use one of the B&W 90-foot antennas, not as high as I wish I had it, but we do what we can. I haven't compared it with a single band dipole, but compared with a Carolina Windom the latter gives about 2 or 3 S units stronger signal, pretty much on all bands. A recent posting I read says that the 180 foot antenna is substantially better than the 90 foot, as would be expected.

There are some similar antennas from some other manufacturers, Bushcomm for instance.

If you need frequency agility without retuning that is where this kind of antenna shines. You may have to fiddle with it to get the SWR as low as they claim. Locally one was put up at the county emergency operations center and at first the SWR was higher than advertised. They eventually decided this was because of all the metal in the roof and changed it from a sloper to a horizontal dipole and that made things much better.

Frequency agility is mostly of interest to the ALE (Automatic Link Establishment) folks, groups.yahoo.com/group/hflink where this kind of thing gets discussed a lot.

OK guys,
thanks for all the replies.

My main reason for asking about this type of aerial is that in a month or so I have a job for a few days in the Highlands of Scotland, miles from the nearest road and even further from habitation. This location should be nice and quiet for HF and has a very wet ground surface so should provide a reasonable earth. Also, and this is the good part, I will have a 100' trailer mast with me that only has a VHF collinear on top, this mast is just asking to have an HF aerial attached to it !!. Unfortunately once it is up in the air I don't think my customer would appreciate me raising and lowering it to tweak the HF aerial, hence looking for something broad band and pretty much "plug and play".

My original intention had been to make something similar but thanks to Chris G4BOH's offer I shall be using his aerial on the day.

http://www.cebik.com/
http://www.eham.net/reviews/?ehamsid=f601e514dcffc0f1adf1d9505a382115
http://www.arrl.org/members-only/prodrev/bymfg.html

all made for interesting reading. Ranging from "rubbish" to " brilliant" so we shall see. :-)

W4RNL's site managed to use up quite a few hours of my day yesterday, certainly made a good read, it is now well and truly book marked on my PC, thank you.

Generically that antenna is a T2FD.

It has a power resistor in it. A certain amount of power (or, on
receiving, sensitivity) is lost in that resistor.

http://www.cebik.com/wire/t2fd.html has some detailed simulation results for T2FD's, showing SWR vs frequency and power dissipated in resistor for frequency.

Having tried some multi-band antennas in the past, I strongly feel that what the vast majority of hams actually want is an all-band doublet: http://www.cebik.com/wire/abd.html

I put an all-band doublet up a few months ago and am so, so, so happy with it that there are no words. It loads up easily on 80M all the way up to 10M and again I'm so so happy with how it works.

Tim.

For Sale: Wm. M. Nye Co. high quality straight key.

It's never been used, so it's in just like new condition.

The key's description, from the Wm. N. Nye Co. website reads:

"The Classic Rectangular Speed-X Keys. These Speed-X keys
feature a cast rectangular base with black crinkle finish, square
section key lever, and a large "Navy" style knob. Contacts are
gold-plated heavy silver, and the key action is fully adjustable."
* Model 320-001 Rectangular key, nickel hardware, $ 64.95

Price reduced to $ 20.00 plus $ 5.50 for shipping (U.S. only).

If interested, I can send you a (.jpg) picture of this very nice
high quality straight key.

Tnx & 73,

-Bill

No one is going to answer a lot of "what if" questions for you there
but if you will order something and build it you will find everyone
wants to help you make it work. I started with the SoftRock 40
receiver and have yet to be disappointed. Don't expect to be treated
like a customer, expect to be treated like one of the gang.

Now if I really understood HOW it works....

PRICE REDUCED!

I have an excellent Drake SW-2 shortwave receiver for sale, at an excellent price. Performs great and is in "just like new" condition.

Features include:

* Continuous frequency coverage from 100 Khz to 30 Mhz
* Modes: AM, CW, USB, LSB
* Tuning Steps 50 Hz or 5 Khz
* Stores up to 100 Independent, programmable memories
* Built-in Selectable Sideband Synchronous Detector (Sync Detector) effectively reduces or eliminates distortion due to fading signals=20
* Front-panel mounted internal speaker
* 1/8" headphone jack, 1/4" external speaker jack=20
* Front-panel mounted RF gain control
* Dual antenna input terminals (50 ohm feedline or wire antenna=20
* Front-panel LED frequency display
* LED Bar graph signal strength display
* Includes Drake A/C Adaptor
* Can also be run off of a 12 Volt DC power source
* Size: 10 7/8" Wide X 4 3/8" H X 7 5/8" D
* Weight: 5.8 lbs including A/C adaptor

* Includes original Drake SW-2 Owners Manual

Price is (lowered to) $ 200.00 plus actual cost of insured shipping=20
(to Cont'l U.S. only). Payment by USPS Postal Money Order only,
please. An excellent receiver offered at an excellent price.

Tnx & 73,

-Bill

Yes, I believe it's a very good deal on a nice, clean shortwave
receiver that really performs very well.

Would you like a second Drake SW-2, perhaps? <g>

A matched pair.

Congrat's.!!!

I got a 756proIII this last spring and a switching PS 125.. the PS had something rattling around inside so
I had to open it up. Turned out to be plastic from some caps but I didn't see any damaged caps.
I suppose is was left in after a fix at the factory or HRO,

I got the desk mic SM20 with it and it only lasted a few months. So I have to get into the plug that
is on the end of the mic... a soma problem ... soma the times it works and soma the time it don't.
easier to fix and more reliable if I do it myself.   Poor testimonies for these high dollar stations.

I got an icom 2720 and it had no schematic... the Users manual IS not satisfactory to connect
external speakers.   No connecter contact drawings.

I also got an icom 91AD and it also had no schemtic.

A person would think at least a schematic would be included. I guess they want MORE MONEY
for service manuals.   I was emailed drawings for the switching PS and

If they don't send me some schematics for these last 2 rigs... my HF amp won't be the PW1

The Ameritron tube amps I am considering has schematics already on thier web site.

By the way http://www.amateurlogic.com/downloads.htm had nice video tour of factory nice show

I'll post again later.

Good luck...73 Gary K4TWO

This seems to be true, there is an ARES net near me that does not do
any training but encourages parcipitants to do conversation after
everyone has checked in. In the course Emergency Communication I we
are discouraged from doing conversation during emergency communication
and encouraged to be brief and accurate with our communication.

Your all correct.  MARS is doing nothing either except checkin nets
every other Saturday where no training is done.    After 70 years
of AARS/MARS continuous service I droped out of it last year.
Only few people left on local nets, and mostly no training, just
idle conversation takes place.
                    Joe/KH6jF (formerly ABM6JF with MARS)

This group has the most complete collection of modifications, usage tips, links to related websites, documentation, and photos along with a user survey and a message forum (5000+ messages archived) to help you get the most fun and DX out of your Realistic / Radio Shack DX-394, DX394, DX 394 LW/MW/SW scanning receiver.

About 100 mods and tips now listed - more mods than for any other general coverage receiver! Thoroughly documented with a Master Index. If you like to tinker with radios, I know of no other recent model that lends itself to as much fun in this arena as the DX-394. Great platform for learning radio-electronics. Always 1 or more FA on eBay.

Active & friendly user community now with over 1200 members. Some members are
keen short wave listeners; some are hams; some are into MW/AM DXing and a few enjoy long wave. Many experiment with antennas and some are ardent modifiers - customising and souping up the rig as hot rodders would do with cars. You'll find lots to interest you and help get the most out of your radio as propagation improves over the coming years.

All here at:

Hi, I have got a problem when transmitting on bands from 18MHz up.
Signal is distorted (on all power levels) and there is something like
"self-generations" - also on AM

Any ideas?

Yes most likely the VCO trimmer caps are in trouble. You may get some life out of them doing a HPL alignment where you just tune the 4 VCO trimmers. If not then they require replacing and generally all 4 are done at that time.

This gets me thinking about grounding, how good, how old, how far, etc. is yours? I had similar problems feeding a long wire on 15m and up when grounded with a 2" wide copper strap to a 10' driven ground rod. Once I shortened the strap all the problems went away.

Good luck!

FT-530 is more easily powered from the top external power connector ~6-15Volts (likes 9-13v). It will also charge the radio battery while the radio operates. The radio battery wants to be above ground when charging, so there could be problems if using vehicle power to a fake battery.

The other radios are similar but have different batteries or voltages. Use the stock power kits or check the service manuals if you want to make a hard wired solution.

In my experience,  I had somewhat the same problem.   Once the
operating chip starts to fail, you will loose bands one by one starting
from the highest band like 10 meters.  Then you will loose 15 meters,
20 meters, then 40 meters one by one.   Send it to a authoized ICOM
repaid center and they will restore the missing bands as I did.
Later found a hame in Italy that was marketing a new ramboard that
would last forever and you would remobe the old ramboard and install
his.   After that you cant loose the operating system.   You could loose
the "memory" chnls as they are a seperate entity and require a good
backup long lasting to retain the "memory" chnls only.  So far I  have
had no further loss of bands. Nor have I lost any memory channels and its
been about 10 years now.  I dont remember the Italians name but think
it was Bernardo  and he was a ham operator and marketed those rplacement
RAM boards world wide.   Stictly for the ICOM751.
                             Joe KH6JF

The problem is, that I'm in Poland. The cost of sending 50pounds twice
across the ocean is higher, then value of IC761 :-)
So I have to do it myself.

> Later found a hame in Italy that was marketing a new ramboard that

I'll look for him

But - In IC761 maual they wrote, that the memory (known "battery
problem) does not affect 761 - only 751.
On the other hand - many hams told me, that 761 has THE SAME problem
like 751.

I dont know what to think

The above 18 MHz made me think of the trimmer capacitors. Are you using the ACC 1 jack? anything attached to that jack? Could also be RFI getting into that jack for any wires connected to it.

If the trimmers the distortion can show up on either TX or RX but usually it shows in RX first.

log onto www.icomamerica.com under support, then knowledge base, choose amateur, then HF then the IC-761 from the radio choices. Then do not specify an article. You should get a whole listing of more commonly found faults found over the years with the IC-761.

Gary K8IZ

Hello,

I've got one Stephens Engineering Associates SEA 112 HF marine transceiver..

Yes, it's a crusty old radio, but I'd like to fix it up. I do repair radios from time to time, but I'm not familiar with this design at all.

1. How are the frequencies programmed in? I see no crystals or diode matrix for programming the channels as I would expect in an older set. I have not taken the sandwich of boards in the center of the radio apart.. the bandswitch seems to go through there and I'm not going to mess with it just yet. So, is this an EPROM-programmed set?

2. Has anyone managed to convert this model for ham radio use or is it best left as is? (I've read at least one case of a mariner throwing one away, so they must not be too valuable..) I've got no antenna tuner, just the set with microphone.

If anyone has the manual including schematic/service data, I might have an interest in it.

Thank you,
Patrick

Two brand new sites hit the Internet for hams next month:

HamBid.com is an Auction, 'Fore Sale' and wanted posts site which is completely free to use.

QRZsearch.com is a ham focused search engines which provides only targeted results, no mush!

Give them a go.

www.HamBid.com
www.QRZsearch.com
www.Dstarforum.com

Yes, it is Eprom Programmed

There wasn't a LSB Kit designed for this radio, but they have been run
on 20 and 15 meters USB.

I am sure I have a Manual around somewhere. You may be able to get a copy
from SEA in Mountlake Terrace, Washington, USA, if you call Phil, and
ask nicely.....

I have a pair of very clean Motorola Spirit (Model MV24CVS) VHF=20
Handhelds ("HT's"), with the (2) Motorola Desk Chargers for sale.

Features of these reliable Motorola handheld units include:

    * Both are 4 Channel VHF models - 4 channels easily
      switchable using channel selector switch on top of=20
      each "ht". Other external controls include volume
      and squelch controls

```
    * Both units include their Motorola VHF "duckie" antennas
    * Both units include good NiMh battery packs=20
    * Both units include their Motorola desktop "cradle" chargers=20
      (with plug-in wall transformers and charging indicator lights)

Easy to use, with easy programming instructions located on the
inside of both unit's battery covers, making programming simple=20
and convenient. Range of these units is approximately 5 miles.

The price for both Motorola Spirit VHF Handy-Talkies is reduced
to $100.00 plus actual insured shipping charges, payable by USPS=20
Postal Money Order.

Thanks & 73,

-Bill

Thanks for the tip Glenn OM.

This manual seems to have everything BUT the connection information
for connecting the thing to a paddle, which is what I need!

Maybe I can look at the board and figure out what's going on...

73,
Jeff

I just moved to Tyler, TX and need to re-crystal my
IC-22A's for 147.0 receive and 146.4 transmit. Does
anyone know of a crystal source for these old rigs?
If I order one 18.3 MHz crystal and one 15.144 MHz
crystal from International Crystal, will it work?
My email address is Cecil@w5dxp.com

Hello Friends,

Check this website www.calculatoredge.com you will find several RF &
Microwave Calculator Tool, you do not need to learn the formula to
solve the equations, if you have inputs then you can just enter into
and get the equations solved.

You also get free magazine subscription on this website, I guess it is
useful

Tom

Menus are a rather "personal" interface between the operator and the hardware. I am rather old fashined and I like knobs and buttons with dedicated functions. Not much made like that now-a-days. While the FT-450 is a bit better in this regard compared to those other modern Yaesu radios, it is NOT even close to perfect by any means. In my opinion, yes, the FT-450 has a 'better' menu system but others may disagree.

>

No, I'm not much of a packer any more. If there was any significant reason for me to pack a radio on my body, I would get the FT-857... although more for size reason than weight. THe FT-450 is smallish, and far lighter and smaller than most of the radios aimed at use as a primary base station, but still, its a bit big compared to the smaller mobile type radios.

Yes, its is possible to carry the FT-450 but its size, in my opinion, would possibly preclude carrying some other desired stuff.... and of course batteries would be the biggest problem. If you really want to hoof it into the wilderness I'd recommend something like the FT-817... even though it is a QRP rig.

Hello all, New to this newsgroup.
I have a bunch of Icom F-3S radios for our local FD. They work OK but we would like to be able to reprogram them for some new channels. The guy we were having work on them takes about 2 months to do anything and even then they are usually not correct. So I got tagged for it.
I found the software and the manuals online. Bought an OPC-478 cable. I have about 4 different PCs that I have tried it on so far. I tried the cable with WIN XP, Win ME, WIN 98. The cable I have is a USB unit and they included drivers so the machines all see the cable as port 2.
I have the same problem on all the machines. I start the program, set it to LMR, Port 2 and turn on the radio. Then I select the option to read the programming from the radio. The program seems to start and pops up a message on the bottom that says "wait a moment". Then it seems to stop doing anything.

So far I have tried changing the ports around, Tried 3 different radios and found a second software download as well. I have set the radios in Clone mode, normal operation mode and no change so far. Does anyone have an idea? I may build an OPC-478 cable and try using an RS-232 port on a DOS machine next.

Thanks for any help.

CB Radio is a hobby. Radio Hammery is more than that; it's a whole-life technical pursuit. I append a short FAQ to assist you in understanding the difference .....

Q. How many exams do I have to pass to qualify as a Radio Ham?

A. 6. The Fools' Licence practical, the Fools' Licence exam, the Fools' Licence Morse "Appreciation", the Idiots' Licence practical, the Idiots' Licence exam and the Advanced exam.

-----ooooo-----

Q. Did all those who are set in place as my examiners have to pass 6 exams?

A. No. The person in charge, The Lead Instructor, Amateur Radio (L.I.A.R.) who exhorts you to tackle all 6 was either too lazy or too stupid, or both, himself to be able to tackle and then pass the 12 WPM Morse test that otherwise-unqualified self-taught 14-year-olds were taking in their stride, despite that he had 25+ years available to him.

The L.I.A.R. only passed one exam.

-----ooooo-----

Q. Why didn't the L.I.A.R. tackle the 12WPM Morse Test if he had so many years in which to do it?

A. He said that he was opposed to the use of a Morse Test to control access to the HF bands. That is, until a no-fail test was brought in, the Fools' Licence Morse Appreciation, that even he could not fail.

-----ooooo-----

Q. Surely the L.I.A.R. took out a licence issued under the gangrenous degeneration that is the M3/CB Fools' Licence scheme precisely because he was the leading light in that scheme?

A. No. When the second class men, the Class B licensees, were given access to the HF bands, the L.I.A.R let his M3/CB licence lapse. When challenged as to whether he had renewed his M3/CB Fools' Licence, he retorted "Why would I?"

-----ooooo-----

Q. Do all countries require you to pass 6 exams?

A. No. The RSCB provide a single-stage exam to be used in some countries.

-----ooooo-----

Q. Does that mean that the RSCB and its directors are criminals who are guilty of racism?

A. Yes.

-----ooooo-----

Q. If I am already professionally qualified, do I gain exemption from the lower levels?

A. No.

-----ooooo-----

Q. Why is this?

A. It is for the express purpose of filling the coffers of the RSCB.

-----ooooo-----

Q. Can I sit all the exams at one sitting?

A. No. You have to prove that you have passed all the practical exams before even being allowed to register for the later stages.

-----ooooo-----

Q. Is that rule applied across the board?

A. No. if you are a buddy of the RSCB, then you can arrange to sit all the exams in one day in advance even though you have not produced any evidence of having fulfilled the practical requirements.

-----ooooo-----

Q. Doesn't that mean that those who make the rules for these national exams break the very same rules?

A. Yes.

-----ooooo-----

Q. That stinks of corruption. Doesn't that mean that the RSCB and all its directors are criminals?

A. Yes.

-----ooooo-----

Q. What is Ham Radio?

A. Ham Radio is a technical pursuit for those who are interested in the science of radio wave propagation and who are also interested in the way that their radios function. It has a long-standing tradition of providing a source of engineers who are born naturals.

Ham Radio awakens in its aficionados a whole-life fascination with all things technical and gives an all-abiding curiosity to improve one's scientific knowledge. It's a great swimming pool, please dive in!

This excitement causes a wish to share the experience with ones fellow man, and shows itself in the gentlemanly traditions of Ham Radio.

Radio Hams are in a unique privileged position in that they can construct and operate their own equipment! No-one else has this privilege. Users, such as broadcasters, the po lice and armed farces, CBers and mobile phone users have to purchase ready-made gear. Manufacturers are not licensed to operate their gear. Radio Hams are qualified to design, build and then operate their own pieces of equipment. They do this with gusto, and also repair and modify their own equipment. This is a privilege well worth the effort to gain, and one to be jealously guarded.

The excitement that drives a Radio Ham starts with relatively simple technologies at first, perhaps making his own Wimshurst machine and primary cells. Small pieces of test equipment follow, possibly multimeters and signal generators. Then comes receivers and transmitters. It is with the latter that communication with like-minded technically motivated people takes off. The scope for technical development grows with the years and now encompasses DSP and DDS. There is also a great deal of excitement in the areas of computer programming to be learnt and applied.

The technical excitement motivates Radio Hams to compete with each other to determine who has designed and manufactured the best-quality station. This competitiveness is found in DXing, competitions and fox-hunts.

-----OOOOO----

However, beware! A Ham Radio licence is such a desirable thing to have that there are large numbers of people who wish to be thought of as Radio Hams when, in fact, they are nothing of the kind! Usually such people are a variation of the CB Radio hobbyist; they buy their radios off the shelf and send them back to be repaired; they are not interested in technical discussion and sneer at those who are; they have no idea how their radios work inside and have no wish to find out; they are free with rather silly personal insults.

-----ooooo-----

One infallible way to disambiguate the CB Radio Hobbyist from the _REAL_ Radio Ham is to solicit their view of the difference between CB Radio and Ham Radio. A Radio Ham will perceive Ham Radio to be a technical pursuit and will perceive CB Radio to be a social communications facility no different in essence to a land-line telephone or a GSM mobile in the hands of a 6-year-old. Thus a Radio Ham could also use a CB set safe in the knowledge that such use says no more about him than having a land-line telephone, whilst continuing to regard Ham Radio as a separate technical pursuit.

A CB Radio hobbyist, on the other hand, sees no difference between Ham Radio and CB Radio. To him, they are sisters-under-the-skin. Wrongly, the CB Radio Hobbyist then tries to classify himself as the equal of the Radio Ham when, in fact, he is nothing of the kind.

Ham Radio is not CB Radio and has no common ground with it! Ham Radio is _THE_ technical pursuit for gentlemen; CB Radio is the name for the operating hobby for those who buy their rigs and equipment off the shelf.

-----ooooo-----

If you are the sort of person who is motivated by a technical interest in how things work; if you took apart malfunctioning clocks, toasters and the like and put them right despite never having seen them working, then a Ham Radio licence is your traditional route! There has never been a shortage of such people, and those who gravitate towards such an interest have always been welcomed into our shacks and their interests fostered. There is not today, nor has there ever been, a need to go out and encourage and press children, children who have never expressed an interest in Ham Radio, to come into our shacks. Such an activity should cause eyebrows to be raised - what normal well-adjusted adults seek the social acquaintance of children?!

-----ooooo-----

Please remember that this FAQ is a _POSITIVE EXHORTATION_ to you to exert yourselves to join our fraternity!

If you are getting no signals whatsoever on any frequency or band, there is a set of small trimmer capacitors that can go bad on the 735. I had mine replaced after about 20 years. Check some of the other bands. You should get some signals, somewhere. And, yes, ten meters is sorta dead right now -- we're at the bottom of the sunspot cycle. Other bands will have much more activity. You should be able to at least hear it, even with a ten meter antenna.

There is also a small battery in the 735 that may need replacing, altho' mine is still okay after all this time.

If you hunt around on the Icom web pages, you should be able to find one with common 735 problems.

Check this site for pictures of my antique radios in house at this time,
but several will be offered on Ebay in the next few months.
Tnx for looking:

Hi

Does anyone have a scan or a pdf of the manual, assembly manual or schematic for the Heathkit Mohican from the mid '60s.

Thanks

Andy

check online for beacons near your area. you might!!! be able hear
them.. maybe you could take the radio to a neighboring ham to test on
other bands. it may just be condition

When you remove the brain from a CBer, what then appears to be
a yawn is really the empty skull trying to suck back in some form of the
missing intelligence.

Those who hold, or have ever held, or are candidates for, or will
never achieve despite an interest going back decades, a licence issued
under the gangrenous degeneration that is the McM3/CB Fools' Licence
scheme will never make it into the ranks of _REAL_ Radio Hams with
their gentlemanly and technical traditions.

Your attitude proves this.

Sonny -

Definitely a candidate for restoration is the HV transformer is the only
item missing,
other than a 1 or 2 tubes.

Look at this 2004 restoration of a Heath kit HX-10
Murray State University (KY)!!!
K4QKY and KJ4W
http://campus.murraystate.edu/org/msuarc/marauder.htm

Transformer, # C54-113...$10.00

Check out the WWV time signals. The 10MHz signal is pretty powerful

Do you have, or can you borrow, a signal generator that covers the band(s)
you're trying to receive? If so, connect the generator to the antenna connector
on the radio, tune both to an in-band frequency, and see if the receiver works.
Could be that the radio had problems... that's why it was given away.

Hello:

1)   I have for sale (3) Uniden AMU080 UHF
 radios. Great for high speed packet.

2) Two DRSI Packet AdApter PC cards with at least (1) extra TCM3505 modem chip, looking for the other two 3505's now.

3) If you need transformers or chokes drop me a line, I have many. House cleaning for my children? HIHI

Dennis, w8nw

Seconded, and try receiving without the tuner in line, just stick the
wire in the center of the antenna connector, making certain it doesn't
short to the ground, and do it with the radio on, there should be a jump
in the noise level when you make contact.

Let us know what happens!

I would like to point out as a former Assistant RACES Officer for a local community in Massachusetts, that Mr. Romney is absolutely correct.

The current EMA-ARRL structure co-exists with the STATE RACES Officer and going nothing.

ARES has nets that do NOTHING. RACES does nothing. 85% of the communities south of Boston do not have any active participation in the RACES drills.

One of the studio engineers was a ham and threw out the question to Jacobsen as something to hit Mr. Romney.

Frankly, MEMA is much better organized than everyone would think. A total communications melt-down is impossible in Massachusetts due to MEMA, SP and SG preparations. The Air Wing is ready to roll out portable towers for cell phones. The SP has several rolling CC and backup towers for the 800 Mhz system. Each town has the 800 Mhz radios provided by the state.

Just so you know that some of those guys actually doing things are HAMs. They learned by being hams. Yet, we don't need hams as a massive fodder to materialize for the day of rescue. I would like to think Mr. Romney is right about this as we are paying our TAX DOLLARS for service!

I worked part time for a ham dealership back in the mid eighties. You would be surprised (or maybe not), how many veteran hams would occasionally bring back a radio as defective when all that was wrong was that the RF gain was turned all the way down. Seriously. These hams had forgotten more about amateur radio than I would probably ever know. But new equipment, etc., can throw you a curve ball some times.

Look at the obvious stuff first. If you don't know what is obvious, give the ham club representative in your area a call. I'm sure that they will be glad to help. I hope you solve the problem before all of that becomes necessary.

Ed, NM2K

Hi,

looking for these things:

]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]

MANUALS:

1.)
T-408/URT-12, also called AN/URT-12
Military radio transmitter, Coast Guard

2.)
Conrac model CNA-8
8" black and white video monitor, tube kind

3.)
RCA model TM-9AN

8" black and white video monitor, tube kind

(#2 and #3 are very similar)

]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]

ITEMS:

4.)
50 degree to 110 degree yokes fitting electromagnetic deflected CRTs that have a "small-shell duodecal base"

5.)
focus coils and magnet assemblied from old TV set CRTs that have a "small-shell duodecal base"

Referring to the base type of the CRTs is the best I can do to to indicate the diameter of the tube neck, which is about 1.5" The base socket has 12 positions (pins) but not all are used. Usually 6 are used, or 5, in the case of a magnetic focus CRT.

All the yokes and focus devices I am looking for refer to those used on black and white TV sets with this kind of CRT neck diameter. This is really old junque and much has been pitched if the original TV chassis was unserviceable, etc.

These are for a project where I want to operate a 10" electromagnetic deflection, magnetic focus CRT. There are a number of NOS CRTs having interesting phosphors, being from radar sets. Basically I saved them from the landfill, and want to put together a few unusual monochrome video monitors. Why stare at the boxes on a shelf??

For me, driving a yoke is trivial, but finding ones for these CRTs is a challenge.

I have a few 10SP4, which are 50 degree deflection, one 10UP14B, and some 10VP15 and 10VP47's -FAA spares.

]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]

I can be reached at the reply-to (un-mung it..) or please find my contact info downscreen at www.bunkerofdoom.com

thanks,
Patrick

I was hoping that some may be able email me a pdf copy of the C42 Radio Set manual and ideally a copy of the schematic. I know these things are bit rare!

Regards

Have you tried Google search? I did and found some good info. While not in PDF format, there was one good source in .jpg format of the manual at: http://users.monash.edu.au/~ralphk/C42.html

I have both an MFJ-9020 and 9040. Neither has an S-meter and I miss it.

Is there any way to add one? I was thinking of putting a meter on the
AGC voltage test point (TP-1).

TIA,

Geoff.

Hello Vinnie:

Yeah I was thinking the same thing there,....

But CBC took it hook line and sinker, hehhehehee I'll bet Brian even got
a chuckle out that, he probably new that was going to get a response.

Funny

Hi, all.

I'm hoping to start my amateur radio life with a QRP
Software-Defined Radio, and the Softrock 40 seems
like a great place to start. However, the guy, who
makes them (Tony) doesn't seem to respond to
emails, so I'm thinking they're not shipping right now.

Does anyone know what I need to do to get some
kind of small, inexpensive transceiver that can be
controlled by Ham Radio Deluxe, PowerSDR, etc.?

Thanks!

~swooz

I've had similar questions, however, there's a note from Tony dated Dec
24, 2007 indicating that kits will continue in 2008. Check the
softrock40 yahoo group.

Have Fun!
Reg

Actually, the distribution is about 50/50 cbers and amateurs that own
the VoiceMax module. Yesterday, I received a very nice email from an
amateur in the UK. It reads:

Hi Brian, just to let you know the Voice Max arrived this morning.
I've stuffed it into my old Icom 735 and boy has it made a difference.
Using the standard HM-12 dynamic mic, used two tone to set the output
rig is peaking higher and audio reports are very complimentary, but
you know that already. Very impressive build quality, and easy
install. Fitting cascaded Inrad 2800 SSB filters so that should
further improve the audio quality. I've left positive feedback for you
on e-bay.

Does it power up when the car is running? Generally, when you hear just clicking, it usually means that not enough power is getting to the radio. Make sure the radio's getting at least 12 volts. It should only need about an amp or so to power up. Also, when starting or shutting off your ignition, make sure you shut the radio off first. This will prevent voltage spikes from damaging your radio.

Generally this is due to the VCO trimmer caps and may be localized to
one VCO currently. I forget the switching range of the VCO but that
should be written in the service manual likely in the theory of
operation section of the service manual.

If one trimmer cap is in trouble all will be soon. Icom has been
using some ceramic dieletric caps in place of the plastic dieelectric
caps. Changing out the caps generally cures the trouble.

You have to find radio airplay time if you're going to be heard and we're not just talking the local college campus. The trick is called promotion. Now that doesn't mean you just put your press kit in an envelope with a demo and hope they take pity on you. Perhaps you call a station and they give you the standard pitch of, "Send it and if we like it we'll put you in rotation." After a few months of never hearing your music, you automatically think you're not worthy.

First, don't buy that. You're one of hundreds, maybe even thousands depending on your city. Your disc will probably end up in the trash or, for more enterprising DJ's, on Ebay in a one-cent CD sale. If you want to be heard and make potential sales, you have to stand out from the crowd, and in this jewel of an article, I'll show you Five(5) Knock 'em Dead Ways to Do Just That!:

#1 - Get your CD into the right hands. The intern that's too busy to getting coffee or typing up a report for the station manager isn't going to be the one making the airplay decision. So find out who the head honcho is in that department and touch base with them. If the club you're playing at charges an admission or you have a show coming up offer to send the stations tickets to give away to listeners. Now keep in mind you can't give the tickets to the staff, since that's illegal and called payola, but you can offer free giveaway items to your potential audience.

#2 - If you've got one station in your pocket, then drop names. Let them know that WABC is playing your music and it's getting a great response.

#3 - Make genuine friends in the business. If you've got a disc jockey that's got you in rotation and really likes your sound, get to know them. Find out why they enjoy it and see if they've gotten any responses from listeners. If they haven't, ask if perhaps they might Q & A their callers about your music so you get a feel for your target audience. It's not a bad idea to ask them for a testimonial or quote if they're well known in your area if you know them personally. People help people. That's a fact so if you treat your area disc jockeys like a living and

Does it do it with the car warmed up and the engine charging the battery? With the engine running, what is the voltage at the radio feed to the nearest 1/10 of a volt? I assume you have decent gauge wiring from that relay to the radio. I would recommend 12-gauge as a minimum. I use 4-gauge to a feedpoint under the seat, then the stock Icom power cable from there.

Awhile back I had all the VCO trimmer caps replaced in my 735. Entire
frequency ranges will start to disappear as they go bad. Good idea to
replace them all at once. I believe there are five of them.

> through these.

A little bit more insight: I went shopping for speakers and found that almost all 12" speakers have a natural responsive range of a little under 100Hz to a little over 3kHz when installed in a simple box (no ports. etc.)

This is, through no strange coincidence, exactly the frequency range that I want to listen to :-).

I ended up picking a 12" Jensen musical instrument speaker which seemed to have a frequency response curve remarkably like all the other 12" speakers out there. There were some 12" PA speakers but those seemed to be aimed at power handling capabilities in the hundreds of watts (approaching a kilowatt!) and price kept me away from them (although it's very likely they would work as well and probably stand up to nearly infinite abuse.)

For non-hi-fi radio listening, I think there's a perfect match going
on there. I feel (no proof, just my ears) that hi-fi speakers that try
to go higher than a few kHz are reproducing stuff coming out of my
radio that I never wanted to hear to begin with.

Looking at it, I have a hard time seeing how chintzy little computer
speakers can legibly reproduce speach etc. at all! I'm guessing they
don't get any flat response at all over the fundamentals of male
speech and are only good on the harmonics. Maybe in a perfect world
that's you need for legible reproduction but with all the noise and
scratch on the HF bands it does not cut the mustard with my ears.

I'm looking for a good modulation transformer, good for around 30 watts,
that matches fairly well a 6L6 modulator output to a 6L6 PA.

Hi All;
A real nice, no dents, scrapes Gonset GPP-1 fone patch with manual
copy for $30 + Postage from 33952.
Only mod, which is a good one is that there is now a 2 pin amphenol
female plug on on either side on the original "transmitter" & "Mike"
connectors on the back, nicely done.
Regards/73......

no amps unless you can get the 13.8 volts.  I would check the voltage
when the radio is turned on. are you going into the cigar lighter???
direct feed.  sounds like an open ground lead somewhere.  check across
the radio terminals NOT positive to the car ground.

good luck

Hi all,

I am in the market for a new radio, and have been looking at some
different radios from the point of view of:

output power
ATU (internal, optional)
general receive coverage (at least 0-30MHz full coverage)
receive quality
internal filters (optional filters also)
ability to run on emergency power (I wish to use it for RACES-emcomm
usage)
ability to run as a home station

I want to run this radio 80% of the time as home station, and 20% as emcomm
station.

I have been looking at the FT-450 and it seems to be very capable and fits
most of the above requirements.

I have also been looking at the Yaesu FT-897, which seems to be a more mobile radio.

I am still making the decision, but I was wondering if anyone has either radio (or ideally both) and could give some opinions (constructive please!).

thanks in advance,
bernard

Hi lamont,

Yes, I have read both sets of reviews from eham (also looked at QST, and, I think,
the PW review).

The most logical reason for the more 897 reviews is that radio has been out alot
longer
(4-5 more years?) than the 450 (it was released sometime last year).

Does anyone have any first hand experience/opinions of either of these radios?

thanks

I made the same decision between those two radios over a year ago and have no regrets in chosing the FT-450.. The receiver is definitaly superior to the Rx in the Ft-897. The IF DSP features are well worth it. I use mine primarily as the HF station in my motorhome, as well as a backup to my IC-746 in the home station.

In addition to the hundreds of reviews already suggested to you, you can also check out the Yahoo Groups for each of those models of radios you are looking at.

Hi

I have just purchased a Howes DCRX receiver which works on 80m and was a kit made by CM Howes in the UK around the mid-1980s. Does anyone know where i could find the instructions or does anyone have one of these receivers?

Thanks

Andy

Hi Ed,

Thank you for the reply, and comments.

On 2008-02-05, Ed_G <Huckleberry_REMOVE_@bigvalley.net> wrote:

> I made the same decision between those two radios over a year ago

> as well as a backup to my IC-746 in the home station.

One question: what are the menuing systems like? I have no real problem with getting to grips with menus, but some reviews seemed highly critical of them.

From POV of something like filtering, how easy are they to use?

> In addition to the hundreds of reviews already suggested to you,
> you can also check out the Yahoo Groups for each of those models of
> radios you are looking at.

Yep, I am a member of both the FT-450 and FT-897 Yahoo groups.

I was looking for another opinion on either/both radios.

Are there anythings you hate/love about the radio?

What antenna are you using with it?

Did you spring for the DTMF microphone? If so did it make frequency entry easier?

Also, did you get any other options (ATU, etc?)

thanks for your comments and help.

If I were to fault Yaesu for anything, it would be their menu system. Of the big three, I find Yaesu's menu system to be the least intuitive. That said, I will say that I find the menu system for the FT-450 "different", and perhaps more straight forward than that of the FT-897 system. I have an FT-817 which is similar to the FT-897 and FT-857 type radios and It is not nearly as easy to use as the FT-450.

>
> From POV of something like filtering, how easy are they to use?

Not as easy at the IC=746, but still better than the other Yaesu radios to which I already referred.

>
> Are there anythings you hate/love about the radio?

No hate, nothing particular that I love, either.

>
> What antenna are you using with it?

A 23' base loaded vertical on the back of my motorhome. Works superbly, but I always adjust my loading coil assy for a good 50 ohm match for the radio.

>
> Did you spring for the DTMF microphone? If so did it make frequency
> entry easier?

I had no need for the DTMF microphone. I am pleased with the stock mic.

>
> Also, did you get any other options (ATU, etc?)

Since my home brew antennas always are designed for a 50 ohm match, I had no need to get the matching unit.

Nothing in BAMA, but try this:

http://www.hamradiomanuals.com/view_manual.php?m=304

It'll cost you, but if you google, you'll find some
favorable opinions on the receiver and some tips, esp in the
eHam.net reviews.

good luck!

Sorry, missed this first time round.

I've got one, made up into a qrp rig with the matching TX.

What info do you need?

Hi

Thanks for the response. Couple of questions. I have the 80m version
and wonder what it would take to run it on 40metres. Also just
interested in the schematics to understand the construction. Lastly,
how the TX matched it and worked etc.

Thanks

A

I am new to ham radio.

I was given an Icom 735.

Set up radio per owners manual. Using a wire antenna (set up for 10meters), an MFJ tuner.

I am not getting any signals at all. Double checked all connections

```
and set per manual again.

I could use a few suggestions.

We are
at the low end of the solar cycle, thus 10M propagation is very very poor -
```

pretty much limited to line of sight.
and not many operating there.

See a neat propagation primer at URL:
http://www.ae4rv.com/tn/propflash.htm

Try tuning the other Ham bands, 20, 40, 80 meters, the latter at night.
The Icom 735 receiver tunes 0.1-30 MHz, so you should be able to hear the AM
Broadcast band and some shortwave stations
The solar cycle will start peaking up in a few years -- see URL:
http://www.dxlc.com/solar/solcycle.html

Then 10M will yield world wide DX.

Lamont

Just one, do NOT buy the D model of this radio, or its twin, the 857.
The only real change was they made it impossible to do the software mods
on it. To put it another way, if you have the 897 instead of the 897D,
you can easily add the 60m "channels" to normal memory locations after
doing the software mod.

That being said, both the D and non-D models have some serious hardware
issues, all of which are fixable. The processor isn't one, it's simply
a 100 gain op amp that starts to clip as you turn it up, no filtering,
no nothing. Fixable with 4 or 5 resistors and caps as I remember. The
finals bias currents are normally not set properly at the factory.
Simple to fix. The drivers, which are the FT817 finals, have the same
problem they did in the 817, they tend to blow up under certain
conditions. To be fair, it's very rare, and fixable with a voltage
regulator. The ALC time constant is way to fast, which causes dropouts
in during portions of words. This one is very easy to fix with a single
cap. There are some others that are less of a problem.

I own an 897 and an 857D, and they do not work at all alike on transmit,
though they are theoretically virtually identical. Both are very good on
receive for the design, and essentially the same. The 897 is great on
transmit, and the 857D is, to put it bluntly, absolute crap. I am
fairly certain that this is due to the bias on the finals, but will not
be able to confirm that until I can take it in for realignment. I will
do that, and then have the other mods done one at a time to see how the
transmit audio changes.

For more information on the 897/857, see the DG2IAQ document. I found a
copy on mods.dk. It may be available other places. It is very well done.

Thanks for the response. Couple of questions. I have the 80m version
and wonder what it would take to run it on 40metres. Also just
interested in the schematics to understand the construction. Lastly,
how the TX matched it and worked etc.

1. Whereabouts in Britland are you?
2. Is your published email address true (It looks facetious)

That is very good news. Very glad to hear it. So the 450, has a
"better" menu system than the 817/57/97?

With all these average, or "positive" comments, I don't understand how the radio
has received bad reviews.

Thank you very much for your comments Ed. You'd helped me alot.

much appreciated.

Interesting Tom. I have heard bad results from the 857D, but not anything
about the 857, as it is discontinued I think.

Have you any experience of the 817? I had thought about picking one up for
SOTA type stuff. The dollar is a good price for me at the moment :)

Oh, one more thing Ed. Have you ever carried the radio for a long distance?
Is it heavy? I know its 2.xKg, but just wondering if its possible to carry
the thing in a backpack?

Just curious..

thanks

I owned an 817 for about 2 years, and wish I still had it. I used it
for PSK31 a lot. I had a Z11 tuner velcro'd to the top and they were a
good pair. It got traded in when I purchased the 897.

Yes I have read about the combination of the Z11 and the 817.

I might have a look and see if I can get an 817 as well as the 450.

thanks very much for your help.

It is obviously a stupid policy and it is especially stupid when they go
back over a year ago. The first one I got was for some multimeters!

What is so secret about multimeters???? Waiting for more letters as I bought
scopes and other great stuff that is god knows where!

Same question you had with the IFR. Since then I have talked to others and
they are getting the same letters.

If you get a EUC you would think all is fine but no longer true. Just means
that the items are now going for scrap prices.

Good Luck.. Didn't mean to be off topic..

As a short term investment in a radio it may not be bad value but in
this fast changing market that has not yet had any of the big 4 players
make a move the resale value in 5 years may be rather lower than you
would expect for a conventional radio - think of the value of a 2002
computer with a then state of the art sound card.

Steve:

You know I can hardly wait to lay hands on the darn thing; and, you know
it will live with me for a day and, THEN, I will have the case off it.

You did see the sentence which acknowledges it has an ITX board in it (a
miniature motherboard!)  In effect, I am just buying a computer which
knows how to be a radio ...

I tell you, I think it is enough.  I do believe I will be happy with it.
  It is NOT like buying gold, I know it has a life expectancy and one
day that will be $0.01 USD.

Still, I will be happy for a bit ... as I said, you mileage may vary.  I
walked into this deal with my eyes wide open ...

Warm regards,
JS

Negative its not powered by the AC adaptor. It contains no batteries
in the phone either.   In fact on the box it says No battery Phone.
Others tell me its a "flash rom chip" whatever that is, and it does
retain the "setup" features in tact even with the ac adaptor unplugged.

Right, no AC adaptor needed. If it is plugged in the phone line, there
is power there, on the line. Maybe that is where it gets it power, then
stores setup info to an EEPROM.

I like listening to shortwave and ham stuff using biggish speakers.
Little speakers like computer speakers sound chintzy to my ears.

As examples, I have an old 50's Caliphone record player/PA system that
has two remote 15" speakers and I just love the way my shortwave and
```

ham stuff sounds through these speakers. I also have some Electovoice EV5's (again, big old mellow speakers) and I love the way things sound through these.

But I don't want to undo my record player setup or stereo system setup to borrow the speakers. If I wanted a new speaker with similar qualities - nothing fancy, just a big speaker in a big wood box - where would I look? Would a guitar amp speaker (something I can buy at a guitar store?) be the right thing for me to buy?

Going into Short Circuit City or Radio Shack I don't see anything that really seems like what I want. I did get a couple of Radio Shack patio speakers (5 inch drivers in a metal box) and those are better than anything else new I've found, but they still don't sound mellow enough and still a bit tinny. They're sort-of listenable and I've been using them for a while but their tinny is kinda grating after a while. I want big and mellow. Where do I go and what do I ask for?

Tim.

Hell, I used Windows 95 (purchased in Aug. of '94) till about 2006.
One can always stretch things out...

The Flexradios I've heard on the air, they sound great, and the guys
seem to swear by 'em.

Brave new world, out there... will miss the knobs & glowing meters,
tho'

I know what you mean, my station extension speakers are some 8" stereo speakers I found at a thrift store. No tweeters, just an 8" cone driver and I like how they sound.

> ... Would a guitar amp speaker (something I can buy at
> a guitar store?) be the right thing for me to buy?

It would probably get the sound you're after but it would be expensive and big.

> ... Where do I go and what do I ask for?

I've had success in thrift stores like Good Will, pawn shops, etc. I look for old stereo speakers with wood cabinets, not plastic.

In my van I use an old GE land mobile extension speaker. It sounds great for voice communications, not tinny, not boomy. There's usually someone at a hamfest selling old land mobile radios, they might have speakers.

Happy Hunting!

Cheap autosound speakers, 6 X 9. etc, tend to have high Qts giving a nice low
mellow boom, when mounted right. One without a tweeter would be best.
Listening on communication speakers like 4 inch types, give little
excitement to music and speech. Of course most of the older radios had
the "big" sound.

I don't know if I would trust that speaker to "sound sweet", it is a "tuned port, bass reflex speaker", and those tend to have a peaky resonant bass, not a sweet bass sound. They probably used the "tuned port, bass reflex" because the box would have had to be larger than their target size otherwise.

Regards,

John Byrns

I think you've got a good point John. The speakers I like
(Electrovoice EV5, Califone PA speakers) are not reflex or tuned port
speakers. They're just big speakers in big boxes.

I have been consistently disappointed by "multimedia" speakers with
subwoofers. In fact I'm pretty uniformly disappointed with what I've
heard in Short Circuit City et al lately. Loud and shiny is not my
current taste. Maybe 20 years ago it would've been my taste!
```

The Radio Shack patio speakers (metal box) aren't awful. But if I've
got them on for hours, it's a big relief to my ears to switch to a
mellow speaker instead.

I'm thinking about taking AB9GO's advice, just buy a big speaker and
put it in a big box.

Tim.

A properly tunned box will sound pretty good and not boom.
The decision of ported vs open or closed depends greatly
on the driver itself, dictating which enclosure is best
suited for itself. Higher Qts is a closed box, and higher still is
open box. Lower Q must be ported to get the bass back from the higher
damping.

The box no doubt goes too low. You need a roll off
above 50 Hz. A larger computer system also goes too low.

How much bandwidth would a "Ham" speaker be expected to cover? Perhaps
the same as that required by basic telephony (300 - 3400hz)? Less?
Wiki gives:

Soprano (240 - 1170 Hz)
Mezzo-soprano (220 - 900 Hz)
Contralto (130 - 700 Hz)
Tenor (130 - 440 Hz)
Baritone (110 - 350 Hz)
Bass (80 - 330 Hz)

And Ham Radio ain't nohow opera... harmonics and overtones are
certainly less of an issue, perhaps? And no need at all to reproduce
basso-profundo notes for sure.

Looking at that information, things get a bit easier, perhaps?

Most communications speakers are rated at something like 100Hz to many kHz. The oft-quoted number needed for voice communication (at least male voice communication) is 300 to 3000 Hz.

The frequency ranges you posted were, I believe, fundamentals; a certain amount of voice comprehension requires accurate reproduction of the the harmonics, and I think I've read that for the lowest male-voice frequencies, having the harmonics is more important for comprehension than having the fundamental. (Makes sense... otherwise the 300Hz to 3000Hz would exclude all the voice ranges you give, in particular nearly ALL of the bass range!)

I have an unfounded belief that for voice communications, any resonance or substantial variation in response in the 300 to 3kHz range is in large part responsible for the "tinny" sound that I ascribe to small speakers.

Save your $160  and stop in at your local Hamfest:
http://www.arrl.org/hamfests.html
and look for a communications speaker that appieals to you.  Those old
Motorola police car type speakers are great for voice.

Paul P.

Bass reflex cabinets are capabl of excellent non-resonant bass but the cabinet and speaker must be matched. A bass reflex cabinet is the acoustic equivalent of a lumped constant impedance matching network of the L type. At system resonance most of the output comes from the port. If the loudspeaker Q is too low or if the system tuning isn't right there will be a ringing at some bass frequency. Properly designed the system is flat and has low distortion.

A lot of commercial ported enclosures are not really bass reflex cabinets, just resonant boxes meant to give some impression of bass where there really isn't any.

Speakers can be _too_ efficient for a bass reflex. However, the cabinet can still extend the bass and reduce bass distortion, however an electronic equalizing filter is needed. All this stuff is in the literature.

Remember the old Bogen 30-watt tube public address systems that had a big "clamshell" box that separated into two 12" speakers, with the amplifier stored in the bottom? I am still using one from the 1960's, and it is a pleasure to listen to during long civic meetings, no headaches. Many people say the Alnico magnets give better sound than ceramic magnets, so look for that. Since each speaker only gets 15 watts, they are designed for efficiency instead of long throw, and fill an auditorium or basketball court

with ease. I added piezo tweeters to extend the response, no crossover needed. Old 16MM sound movie projectors had separate speaker boxes as well. One of the joys of this hobby is bringing an antique tube sound system to an event and having musicians and DJs and the audience amazed by the clear natural sound. When the sound is "alive" the audience really pays attention and applauds more enthusiastically.
Don

Many people say a lot of things that have little basis in fact. There's nothing in an alnico magnet that will make a speaker sound better. This myth probably came from the fact that the early speakers with ceramic magnets were cheap junk. They had no clue how to design a proper motor system using ceramic, so the drivers were lousy. But by the late 70's, alnico got so expensive that virtually everyone stopped using it and everyone went to ceramic. Once they figured out how to properly use the magnets, the performance was at least as good, if not better, than the alnico systems they replaced. And even if alnico magnets have slightly better immunity to flux modulation, a modern ceramic magnet system can be designed to work just as well. Alnico also has the distinct disadvantage of being susceptible to demagnetization from the voice coil. By any objective standard, today's speakers with ceramic magnets absolutely trounce anything made with alnico back then. And btw, today the Chinese have a monopoly on alnico, and it's more expensive than ever.

WANTED:....... MOTOROLA Saber III VHF

I am looking for a Motorola Saber III (or MX3000), 144 to 162 MHz
split, 2.5 -6 watts, with desk charger, one or two GOOD MOTOROLA
batteries (prefer 2700 Mah) and maybe a speaker-mic.

Or, maybe with programming hardware and software for an XP system.

The Unit should be clean and in good condition. I will need you to
program it for HAM use and a few Marine channels.

Please send info and photo(s) to me at w7gsa@yahoo.com

I will be at the Orlando HamFest on February 9th if you have one I
could pick-up there.

Thanks,

Bill

Last responder said it gets power from the phone line itself.
That is a negative.   If true then when I unplugged both the
AC adapter and the ph line plug it would have lost all its
SET-UP info instantly. I had to unplug the ph plug and the
adapter, take it down to the local Radio-Shack and they then
Pluged it into the Ph line and plugged in the AC adapter.

All my settings and stored memories stayed in tack as I had set them. So your assumption that the Ph line power keeps the setup chip active is wrong. Also removing the AC adapter did not loose the SET-UP settings. Only thing I wanted to change was "change rings to 2, then announcement to leave a msg after tone goes out. The guy at Radio Shack did replug it in to his ph line, replugged the ac adapter in, and proceeded to change the nr of rings to 2 rings then announce. He did it so fast I could'nt even see which setup key he changed the rings from 7 down to 2. So obviously some kind of chip in the phone does'nt rely on any external power source to keep its setup info active.

Joe

(someone suggested it might be Flash chip whatever that is.)

Flash memory is fairly ubiquitous now-a-days. The most common form is seen in digital cameras:

http://en.wikipedia.org/wiki/CompactFlash

But, it is found in MP3 players, cell phones, and ... AT&T Home phones, any any other device that needs to retain semi-dynamic data across a powered-down state.

Thanks much Jonesy! My brother-in-law was a electronic service man
till he retired about 5 years ago. His explanation mirrored yours!
I still dont understand the intra stucture of such a chip but he
made it clear that such devices do exist.

```

from around 96 to 98 i had purchased a shortwave radio from mcm
electronics. It had dual cassettes, am/fm radio, shortwave. It had 2
removable speakers. Does anybody know what the model number was, and
if anybody has one for sales. Pictures would help also. I miss it.

If you want to build your own baffle or case, maybe you'd like to try a Quam
8C10FEPAXB.  8" coaxial (i.e. has whizzer cone), 40-20,000 Hz, 97 dB spl
(1w/1m), 8 ohms.  $14.16 from http://www.tselectronic.com

Bzzzt, Wrong Assumption.....would you like to try for what's behind
Door #2....   it would only take a couple "Kbytes" to hold ALL your
settings, in EEProm or Flash Memory..... Google is your Friend if
you need to get yourself up to speed on what Flash Memory is.......
Seems like technology has passed you by, sonny.....

Yep it sure is a shame
Also my ICOM751 oughta have something like that too for the 32
memory channels instead of a backup battery. Years back I started
loosing stuff like the 10 meter band, then the 15 meter band dissappeared,
then 20 meters and finally all I had left was 40 meter band. I had heard
of a guy in Italy that made a replacement board for the IC751, and once
installed you would never loose any operting system bands.
I ordered the board from him and sure enuff it was as hugeas the original
and I figured I'll never get this thing plugged in right so I sent
the Rig up to an ICOM repair center I thing was in Oregon ot Washn STate.
I asked them to fix the rig and at same time install that ram board I
bought. They did it and now I will never loose the operating system
again although the Italian I bought the Ramboard from said your safe
now as far as the operating system is concerned, but the one backup
battery when it goes down you will loose the 32 memory chmls only.
YOu sill still be able to tune up on any freqcy you like however.
So thats where I am now.   What a relief.
Joe

Yep technology has passed me up for sure. I use to burn my
own rom chip in the old C64 commodore computer and understood how to
do that, but at 87 I am a little befuddled on these recent things
like "flash memory" chips. I also takeing Namenda pills for
AD (alzheimers deficit). Can remember things way back but
for past 24 hours I have to write everything down then forget
where I put the notes to myself. What a miserable life.

Jonesy,

That Azden PCS-4000 I removed the internal battery which was supposed
to hold the memory chnls in place and ran the 2 leads out the back
of the rig and tied em to a little "AAA" battery holder to replace
the one I removed from inside. It still dont hold the memories
I crank up so that was time wasted. I tried both the rechargeable
external aaa's and then tried two AAA's regular kind but still no
way to keep the memory chnls after setting them up.

Just got my new FT-857D which I love, but I haven't found a menu option for reducing the RF power while tuning antennas. Currently I only have a G5RV HF antenna, and an MFJ-901 Tuner for it. Will transmitting at full power (100 watts) while using the antenna tuner, for a few seconds harm this radio any, or am I too worried about nothing?

The radio is going to go into high-SWR foldback, almost certainly, if it sees an SWR over 1.5:1 or so. The manual doesn't seem to say whether this situation puts an undue strain on the finals.

There are a couple of ways to reduce power when tuning. To do it manually, just adjust menu #75 before tuning and then turn it back up afterwards.

The Yaesu FC-30 autotuner supports this radio directly (it plug into the CAT port), Similarly, the Yaesu ATAS antenna can be connected to the radio. For both of these, once you set up the radio, you can turn to multi-function row K, press TUNE once to enable the tuner, then press and hold TUNE for a second - the radio will then transmit a low-power carrier and activate the FC-30 autotune sequence or tune the ATAS position. When done tuning it returns to whatever power level you've set in menu 75.

There are aftermarket products which permit automatic low-power tuning of one sort or another with non-Yaesu antennas. BetterRF sells a "Yaesu Tune Control" which plugs into the CAT port... it makes the radio "think" that it's connected to an FC-30 autotuner, and enables the low-power TUNE feature of row K. You can use this with a manually-controlled screwdriver antenna and adjust the antenna position via a separate toggle switch (that's the approach I use). The tune-controller also has a 4-pin Molex jack into which one can plug an Icom AH-3 or AH-4 or compatible autotuner... the tune-controller in effect translates the Yaesu autotuner control protocol into an Icom-compatible protocol.

Exactly the information I was looking for! Thanks! I don't know why it
wasn't given a little more prominence in the manual. I downloaded the .PDF
version of the operating manual and did several searches for "power level",
"power" and other keywords, but never noticed that menu item. Now that you
told me which menu option to look for, it seems obvious, but somehow, I
overlooked it. Thanks again! I feel MUCH better tuning the antenna now!

I have a problem with my ICOM 735 transceiver. It has done me well for 23 years now, but just recently I have noticed raspy CW and SSB signals on receive, on an intermittent basis. This problem comes and goes, often in long intervals and does not seem to be affected by temperature. It sounds simply like an unclean signal with a raspy note on top of it. I am so far unable to determine if this affects my transmit signal or not, I did get a poor report once during this condition, but during another transmission at another time I did not. I have the complete service manual for this rig, but am a bit unsure where to start.

Any ideas appreciated.

I just got my car back from the shop, and that Icom IC-208H I have wouldn't turn on... as I prepared for the long annoying battle with the dealership, I figured I should make sure it was definitely the radio... brought it to the basement and hooked it up to a 12v powersupply - it worked fine.

Now - my 2002 Jeep Cherokee was getting the transmission replaced, and sat outside at the dealership during the 2 coldest weeks we've had in a while... so cold that when I took the radio out, it hurt to hold it for too long in my bare hand... but it still fired up in the basement even though it was obviously below the Icom operating temp of 14'... so, the problem must be with the car.

So I get my battery tester (can't find my multi-meter), set it to 12v, hook the leads up to the connection in the car - 12v, no problem.

This morning, I reconnect the radio to the power in the car, and I can hear it ticking... like its almost going to think about firing up, but... it doesn't happen.

The setup is simple, its fed from the battery with a 30amp relay that trips off the fuse box when the car is turned on. 12v coming in... but it won't turn on, so I think to myself... 'no amps?'.

At this point, my slowly decaying knowledge of electronics starts to flounder... but obviously its not the wiring because the current is getting there, and not the relay for the same reason. Any ideas? Could it be as simple as a bad connection somewhere? Thought I'd get more knowledgeable thoughts on it before I start to tear things apart out in the cold.

Thanks for any input...

Richard

You would have to measure the voltage with the radio fired up. See if you can measure somewhere
with everything connected. I am suspecting the relay, it might also have a voltage issue
feeding the coil. If the relay is handy, try bridging the contacts.

The ground.
Check the grounding of the radio.
If you have 12V at the radio try sticking the meter ground probe right
on the radio and measure the 12V again.

Good luck and good hunting.

I see some others have already answered but here is my $.02 worth-

1- First place I would check is the relay. Possibility the contacts have become corroded. Check voltage on both sides of the contacts under load. If you can access the contacts, clean them with fine grit sandpaper or a jewelers file (be sure to disconnect the circuit from the power source when doing this).

2- Check your ground to the radio. The radio should NOT be getting its ground for power via the antenna shield. The ground lead to the power connection should have a good clean connection with the vehicle chassis.

3- Check any fuses that are directly inline with the radio. Check the fuse contacts as well as the fuse itself. I have seen some glass fuses that appeared intact, but were open near one of the metal ends. I have also seen some the ATC and ATO type fuses get oxidation and gunk built up on the contacts. They would read "normal" voltage with a VOM until you put the circuit under load.

4-Check the contact point where the high current line ties into the battery. Make certain there is no oxidation or sulphation built up at this point.

I seem to come across lots of good deals on radio-phono combinations -
the typical late 40's or 50's radio phono in a squarish cabinet.
Passed one up lat weekend , 20 dollars , complete, with eye tube.
this is typical of them because no collector needs yet another one of
these. even the 60's transistor sets- same thing - can't give them
away.

but for parts, lots of good transformers, tubes, large speakers can be
had for a reasonable price usually.
you could buy one of these and modify the cabinet to suit your need
for a box to put it in, just re-use the speaker and cloth and cut the
box down to suit.

I hate destroying these things, because lots of enjoyment can be had
with them, but for large speakers, I dont' see why there is much
demand for those..

smaller speakers , like one would find in a tombstone or cathedral,
now that is a different story..
Phil

Maybe your receiver is being desensed by a nearby and new
source of strong RF energy?

Could it be that you left the noise blanker on and are
noticing its effects on strong signals?

Well, "Top Band" is usually considered to be 1.8-2.0 MHz . I too have used
them before, (Made one of DeMaws) and for the need will work just fine.

Tnx the URL.

It's not ignorance - he's clearly in Motorola's back pocket, to take
away whatever ham spectrum he can to give to the big communications
cartels. All in the name of "emergency response", of course, but
anyone who can add up a couple bandwidths knows that the real need is
to give it to the cellphone companies.

The ARRL has to kind of pussyfoot around these issues because you
can't have hams being against the communications cartels as long as
"emergency responder radio" spectrum is their trump card.

Tim N3QE

There is a local Amateur repeater in my area that is Project 25 digital
(P-25 digital). I would like to talk on this Amateur P-25 digital repeater,
but also listen to the local Sheriff Office and Highway Patrol who are also
operating P-25 digital. I am looking for an Amateur Radio mobile or
handheld that is Project 25 digital (P-25 digital) capable, but I do not see
any such Amateur mobile or handheld equipment.

My question is what do you fellow Amateur Radio Operator use for P-25 digital?

Steve

Everyone I know, who is "cutting edge", is ~1Ghz+. My 100W Ghz amp is unbelievable--I am now constructing the 1KW (and I am telling you, there ARE major design/construction problems to deal with!)--dreaming about 4KW!

HF is just too-too ...

Regards,
JS

A club member has just bought a 751E which needs the
volume/squelch dual concentric pot replaced. The volume
control is more like an max volume on/off switch! (It's 10k AF
& 50K SQL jobby.)

I just wondered if anyone knows where he might pick one up.

TIA

Charlie,

Steve -

I attended Illinois Repeater Council technical presentation at our local
club meeting last month -- about various modes (P-25, D-Star, etc).

P-25 amateur radio repeaters do NOT widely exist (You may have one in your
area -- from a wealthy ham or a tech with access to P-25 equipment).

You will not find P-25 "off the shelf" radios from amateur radio mfg. ---
Look for Motorola or Kenwood LAND MOBILE RADIO (LMR) resellers for mobile
units --
same dealers that sell to local public service agencies (Sheriff and Highway
Patrol).

IF you just want scan capability --- check out new Uniden scanners, etc.

.. as a follow-up D-Star (JARL standard) is a cheaper digital approach used
in Japan and being sold by Icom today in USA.

P-25 will likely never be adopted or widely used in amateur radio --
until significant cost reductions in P-25 digital technology and equipment
occur.

I am a Democrat. Even I can tell this is a smear job. Lots of
operatives out there with their "eyes on the prize". Don't be misled by
these emails. The gloves are off. Internet dispatches are ALL suspect.

We are all sailing in rough seas. In the end, each of us can pick the
candidate we are most comfortable with.

73,

John

John,
I would respectfully beg to differ with you. This incident actually
happened a couple of years ago, -long- before he threw is hat in the
ring; no reason to 'smear' him back then...

You miss the point, the smear is NOW. Why bring up comments that are
two years OLD, NOW? To smear the guy, is the only reason.....

It was my understanding when it was first brought up that what he meant was
they the government agencies were fully able to handle there own comm needs.
It would have truly been udder stupidity on his part for him to have meant
anything else. It is true that the amateur radio community is needed less
and less even though we are more than willing and able to fill the need. A
very small case in point: A charity walk/run used to be handled by the
local ham radio clubs providing emergency communication and coordination
via handheld radios and the local repeaters. This past year it was handled
by the Girl Scouts using cell phones.

Jimmie

No, 'You', I believe YOU miss the point. *Romney* said he did not like
ham radio operators. Words from *his* own mouth. Period.

Please tell me why -quoting- what HE ACTUALLY SAID is a smear...and if by some stretch of the imagination, you manage to twist a direct quote around as a being a smear, well then, Romney smeared himself. Finally, are we to give him a free pass just because he said it 'x' number of (years) (weeks) (days) ago?

> Why bring up comments that are
> two years OLD, NOW?

Well, because he never retracted the statement. Presumably then, these are STILL his feelings towards hams. Again, does a negative statement he makes just 'time out' and shouldn't be quoted after a certain period of time even though he still stands by the statement? What period of time would you suggest that after which, we just ignore what he said?

have a cracked band-switch knob on my TENTEC Hercules II amp. Does anyone have a mint knob from a parted out TENTEC Corsair or Hercules II they would be willing to sell? TENTEC has the knob without the spun aluminum insert which is also damaged on my knob.

Thanks for making the databooks available, but boy
Rapidshare.com is sure a pain in the a$$!

20 minutes minimum between downloads, and a 2 minute
timer to make sure you sit and stare at the screen before
entering a code you read off of the screen.

Bah!

-Chuck

Mine also went out (in 751A) and the local ham shop said the
replacements with the push on-off are no longer available from Kenwood,
or anyplace else he checked. He ended up replacing the vol-squelch pot,
but then put a little on-off toggle switch on the side.

Now if only someone would post the RCA Transmitting Tube Manual
I could get ride of my, very ragged copy, that is Thumbed to death.

These are used by the military but can be found for sale to the
general public.
My question is this...and I know there are many many variables at play
here...what
would be a general ball park range for one of these radios
transmitting at 100 watts on a 16 foor vertical whip antenna?
My answer is "pretty much anywhere in the world" but I am wondering
what the real answer is and what sorts of considerations someone takes
into account?
At what point would someone use ALE mode versus a fixed frequency in
order to increase range?
And, do they peple here consider such a radio a good "starter" radio?

MTV,

Thanks, he may have to get the same thing done. Someone in the
UKAR newsgroup managed to get one a couple of years ago but
the dealer sent to Japan for that one.

Charlie.

Mouse over "Support", choose "Amateur radio" from the resulting
pop-up, then clock on "Amateur Radio Files Download".

http://www.kenwoodusa.com/Support/AMA_Radios/ gets you there more
directly, I think.

http://inform3.kenwoodusa.com/Resources/AMA_SoftwareRCPMCP/MG71210.exe
appears to be the file you want.

Need some DigiPan guru help.

Using DigiPan v 2.0 with my Icom 756pro3.

For CI-V operation with my Icom, I can set the 756 address to 5C (for a
756pro) and the DigiPan software will control the transceiver frequency.

My other logging programs (CT, EQF, and MixW) all use the standard 6E CI-V code for my rig.

It would be really great if I could modify the DigiPan software to accept the usual 6E code for the Pro3, even if the additional features of the Pro3 are not handled by the DigPan 2.0 software.

Does anyone know how to change DigiPan to recognize 6E as the rig code for the 756pro? (Or is there a newer version of DigiPan that can be set for the Pro3?)

For PSK31, I much prefer DigiPan over MixW, even though MixW can select the Pro3 with the 6E code.

All suggestions appreciated! 73, Andy K4YKZ

I know thiss is a swap forum, but this seems to be the best place to seek info for me.

I was successful bidder in October on a IFR FM/AM-1100S. First had to wait for approval of my End User Certificate, which was in mid December. I made the transaction, paid the "UPS Store" to pick it up and ship it to me. It didn't work, naturally. Spent about 15 hours making it work. So far so good.

I get an e-mail today. The Government has changed its core to require "demilitarization", meaning they want me to ship it back, it is to be destroyed. AN IFR! ??? Its part of the fine print. And I guess if I bought a surplus h-bomb I can understand it, but this is such benign equipment. It can be bought on Ebay almost constanty one is available.

Does anyone have any experience with somehting like this? And if so, is it possible to talk some sense into their head? As my first purchase like this I certainly will never bid on anything again with them. There's always scopes being sold, etc. And if an IFR can be called back, anything can, so be warned there as well.

Thanks for listening.

Mmmmm...given how long I own my radios, and given how quickly pc
hardware improves, I'd probably go for the model that doesn't include
the integrated PC.

The firmware is upgradeable, they promise to allow you access to any new
versions of the SDR software.

The CPU is an intel dual core;  Just how much processing power do you
need to run a radio?  But then, you can cruise the web on this "radio!",
run other apps (think EZNEC here), etc.

Also, if you need to control it remotely, you can still do so from
another computer via firewire (say put the transceiver in your trunk and
run it from a laptop in your passenger compartment), LAN, or
WAN--wireless-ly.  Indeed, you can control this rig from anywhere in the
world using VOIP!

Personally, I thought it time to buy.  Will certainly beat anything I
can homebrew here ... your mileage may vary.

Regards,
JS

I know this is an off topic info msg but thought might be of interest
to some of you. I just bought the latest Radio Shack AT&T house
phone.   It is progrmable and uses no batteriest to hold the settings
in tack. It had features like 4 pre programale instant memories
M1 M2 M3 that you can put in things lile "911" or 10-10-220
or Time check nr etc. You can set announcement after 2 rings then
it can store up to 19 incoming msgs or 29 minutes of calls.
I was bale to setup most of the features myself except the
Annoncement after 2 rings. I went back to radio schack and told
them I could'nt change the nr of rings to 2 followed by my
announcement.   they said bring the phone in and they would do it
for me. I thought   "oh no if I unplug the AC adapter I'll loose
all the stuff I had set up. But they said no "it has a batteryless
chip in it that retains the set up features without power of any
kind!!! In fact the box it came in says "battery less" phone.
So I took it down and the guy did it for me so fast I could'nt see
which keys he was pokeing. Now its set for 2 rings only instead of
7 rings prior to the automatic announcement. he said the phone reqjuires
no battery power to retain the "setup" contents. I wonder what kind

of chip can do this:: ROM or RAM??? ROM CHIP requires a burner
RAM chip reqyures some kind of battery backup lithium or whatever.
But this Home Ph had neither. It says right on the box that it came
in "batteryless phone"...
How can this be????????
Joe

EPROM can only be erased with ultraviolet light.

EEPROM or more likely flash memory like is used
in thumb drives or camera memory cards.

You can also simply say you no longer have possession of it as it was sold somewhere but since you have it that is a problem.

I received the same letter for equipment I bought in the past (over a year ago) and I sent them a nasty letter back to the effect that I had no idea where it was and since I trade all the time at hamfests so they are out of luck.

They accepted it.

For some unknown reason there has been a change in Govt. Policy and they have made it retroactive. They have been starting to do that on many electronic auction items over the past year or so and it is a stupid policy which means they will cost you and I the tax payer large amounts of money because we will no longer buy from Govt. auctions.

I must also say that a number of us have ceased buying at that auction because of the same problem you are having. Many more can expect to get those letters in the future I was told.
GUD Luck!

The thing that gets me is that it just makes no sense. Its equipment available anywhere, no big secrets, etc.

And yeah, I won't ever bid again, which I will convey to Govt Liquidation, who I bid through. If they do enough business they can maybe exert some pressure, as a matter of protecting their cut.

And all this after I waited 3 months for the EUC to be approved, which I tought was for this purpose, make sure it was not going to the wrong hands, etc. Makes the EUC pointless.

Oh well, I found another on Ebay for same price. The only down side is that they won't pay the shipping from them to me.

And I called, they guy said pretty much what you said, if I don't have it, note it on the return letter and that's the end of it. So...why bother...It just makes no sense...

Well, thanks for the understanding ear.

-GeorgeC

are you wired to the mike jack on the rear....dont..manual states do
NOT run both .

if you are wired into the 13 pin acc plug, double check your wiring..

Is there anyone here who can explain to me why the ICOM IC-2820H costing
$649.95 with the UT-123 D-Star DV Digital Voice / GPS Unit $269.95 for
a total of $919.90 can be worth so much more than the Icom ID-800H
costing only $559.99 with the Dstar all ready installed. I would really
like to know because at first look the ID-800H looks like a fantastic
bargain. What am I missing. I'm not trying to start an argument I just
cannot understand what makes the one worth $920 and the other $560. Any
insights would be welcome.

All

I have now had an official repsone from the Tigertronics Support Team.
Intresting answer..

Thank you for your email. Regarding your question about the SignaLink USB, we have heard of this issue before with a few IC-706 units. The problem is with the radio (not the SignaLink) and is caused by a lack of isolation between the radio's Mic and Accy jacks. Normally the ACCY Port is fully isolated from the mic jack and whatever you attach there will not affect the Mic audio. However, on some 706 radios, they seem to be lacking in isolation, and the ACCY Port loads down the Mic circuitry which results in weak Mic audio until you turn up the Mic gain.

You can most likely resolve this issue by adding some isolation inside the SignaLink. This can easily be done by simply replacing the SignaLink's "Mic" jumper wire that you installed in JP1 with a standard
1/4 watt resistor (this will simply plug-in in place of the regular jumper wire). We suggest starting with a 2.7K value and go up from there until you find a value that adds enough isolation to let you keep the Mic gain control set normally (try 2.7K, 4.7K, 10K, 18K, etc. - standard value).

Note that you need to use a 1/4 watt size resistor (nothing larger or you'll damage the JP1 socket). Also, during digital operation you may need to turn up the software volume controls (or the SignaLink's TX knob if you have the USB version) to offset the additional attenuation from the resistor. Please let us know if you have any further questions.
Thank you.

If you buy a whole complete car (in this example) it will cost you $20,000.
If you buy a whole car - part by part - it will cost you $300,000.

The same theory applies here. So buyer beware. If you know you want
D-star, don't buy it as an add on, buy it built-in, else it is going to
cost you.

-Julie

Julie, I don't believe that you understood or answered his question.

One unit without the gps costs more than another brand which includes the gps.   His question is WHY ?

James

If you buy a whole complete car (in this example) it will cost you $20,000.

If you buy a whole car - part by part - it will cost you $300,000.

The same theory applies here. So buyer beware. If you know you want D-star, don't buy it as an add on, buy it built-in, else it is going to cost you.

-Julie

1) Dual Receive (The 800 can only receive one frequency at a time)
2) GPS (The 800 doesn't have this).
3) Remote head.

The manuals can be downloaded from http://www.dstar.ca/docs.html as PDF files. There are probably more differences.

Greetings James,
The point is if you buy in pieces and add ons, it will cost you more.
I believe I made that point clearly.

Plus, if you compare the specs you will see that all things are Not Equal.

Please review the label on your bottle of Lithium, and follow your doctor's orders.

Love,
Julie

Okay,

Now that I have had my fun at James's expense, and he has been such a
good sport and a gentlemen,
let me say - Thank you James for taking the jokes.

Tom's question seemed to me to center on the D-star aspect more than the
GPS.
The bottom line Tom is to be a good shopper, like you appear to be doing,
know what is important to you, and buy yhe best deal you can find.

Let the Buyer beware.

-Julie

James, you haven't answered his question either, which puts a great deal of doubt on the matter of you understanding his question as well. At this point Julie has at least attempted to answer his question, a bit more useful than being critical of someone's attempt to help, YMMV.

Tom, the more expensive choice is that way because instead of engineering and manufacturing as a unit it has to be designed to work with and without the options as well as having more production runs to build each of the options in addition to building the initial unit. Add to that the difference in features and the difference in when they were designed, later models benefit from previous engineering, better predictions of how long it takes to get to market, parts supply times, etc etc.

Not to mention Icom prices as they see fit for their own purposes, be they numbers of units in stock, how big the production runs were, what the exchange rates were at the times of import and sale, which units they really want in use...

So the dual VFOs and the built in GPS is worth $360 more?  The ID 800H
also has a removable control head so that one I left alone.   I guess I
would have thought that the additional features and utility justified
$200 additional tops but $360?  Since the Kenwood TM-D710A testing has
shown that it's built in TNC is just as robust as most external ones
I'll probably go that route given that the Packet infrastructure is
already built out.  My primary interest being in EMCOMM that makes more
sense to me right now.

I have an IC-1271 1.2 ghz all mode transceiver for sale with the following:

HM-12 mic
PL
Original Manual
Original Service Manual
ROM replacement board for CPU RAM board

Note - the ICOM 271,471,1271 all had the CPU operating program stored in battery backed up RAM. When the battery died, the CPU RAM board had to be sent to ICOM to be reprogrammed. The ROM replacement board eliminates this problem while still providing battery backed RAM for storing Channel and VFO frequency information.

$500 plus shipping and insurance from 92886

Attention all Amateur Operators.
Please Read, and send your comments to the ARRL and Romney Website.

Wednesday 16 November 2005 @ 15:48:10 | Eastern Massachusetts ARRL Romney
'Disses' Amateur Radio In
Televised Town Meeting Posted on Wednesday16 November 2005 @ 15:48:10

Governor Mitt Romney dismissed the role of Amateur Radio operators in
emergency communications
during a televised 'town meeting' program last night on WCVB's 'When
Disaster Strikes: Segment Two.'
The program featured public safety and volunteer organization officials
from
across Massachusetts
among its audience.

Host and moderator Natalie Jacobson asked an increasingly-agitated Governor
Romney questions about
communications interoperability, and communication without commercial
power.
Romney was next asked
by Jacobson, '...so does it come down to ham radio?...'

The Governor replied in a disgusted tone, 'No, we don't need to deal with
ham radio operators...'

Embarrassed public safety officials later tried to put in a good word for
Amateur Radio. National
Weather Service Warning Coordination Meteorologist Glenn Field was prepared
to state the importance
of Amateur Radio, when Salvation Army Colonel Fred Van Brunt was called
upon. Van Brunt remarked
about his organization's quest to improve its communications capabilities
and how Amateur Radio has
aided his organization. 'The ham radio situation helps a great deal,' he
stated.

'I have already written and submitted a letter to the Governor's Office,'
wrote Eastern MA Section
Emergency Coordinator Rob Macedo, KD1CY. 'I have also written an email to
Natalie Jacobson.'

ARRL Section Manager Mike Neilsen, W1MPN sent a section-wide email today to
all Eastern MA ARRL
members describing the incident along with actions he and his staff were
taking to mitigate the
situation.

'[Romney's] attitude about us sets an unfortunate tone within the state's executive branch,' wrote Neilsen. 'As a former military officer, I see this as a failure in leadership. My immediate concern is our working relationship within the [Massachusetts Emergency Management Team] environment.' Neilsen intends to address the Governor's comments as 'an urgent matter' at a meeting on November 17 with Don Carlton from the Massachusetts Emergency Management Agency.

'I was very disturbed about what the Governor stated on the program,' wrote Ron Wood, W1PLW, the section's Public Information Coordinator. 'It does show that more work is needed by all hams in the section. It's a great idea to write letters explaining the good we do.' Wood is attempting to schedule a meeting with the Governor's office tomorrow so that EMA ARRL staffers might discuss the matter further.

Tom Kinahan, N1CPE wrote that Governor Romney's comment has made 'a PR problem' for Kinahan in his role as MA State RACES Officer.

'I've got a roster of over 150 Amateur Radio operators that support local communities, and those of us that directly support the state government. There are at least double that in terms of people that are actually out there that I don't have formal paperwork on that support Amateur Radio emergency communications in some organized manner... The Governor has said that he 'certainly doesn't need to rely on ham radio' -- where does that leave the RACES program now?'

'I am ashamed tonight that I am a Republican!' remarked one ham radio viewer. '[Romney] speaks in derogatory tones about hams. He certainly shows an ignorance as to what we do and are capable of. I suggest a grass roots campaign of local hams calling the State House and The Governor's Office to protest.'

One more good reason not to vote for him...but look at the bright side:
This will give him a chance to flip-flop again and say how much he likes
hams.   ;-)

P.S. Even though I'm not a resident of the state of Massachusetts, I
wrote a letter of protest at the time. As a non-resident, you can
imagine how far it got.

That is certainly one avenue to pursue; however, some roads lead to better places than others.

How about a re-evaluation of us, our plans, our equip., etc. and instead of finding fault with other--why they do not find our services desirable, we ask the question, "What can we do to become up-to-date-current and make our services desirable--to the point they can't ignore us?"

But then, that stands a fat chance ...

Regards,
JS

Yeah, butt; Remember JFK, "Ask not what your country can do for you; Ask
what you can do for your country ..." (paraphrased, of course)

If you're interested in "whatever" - it is much safer - to go to Ebay and punch in for example - 2 meter radio OR CB radio or whatever it is you're looking for. That way you know you're in their site - not some suspicious one. It might take a minute longer - but it is well worth the wait - instead of possibly handing out your financial future to some ass hole.

Ummmmm...did you guys see the date on that "news release".

It was Nov of 2005. (2 years and 1 month ago)

Then again this seems to not be an issue with most hams.
Being several days late and $25 short is standard operating
procedure.
Heck most of the hams I hear on 75 Meters on a nightly basis
at night in 4 and 5 land still sound like their stuck in the 1940's
and 50's with all their
use of the N-word and racial tirades against Obama and Hillary and all
the other assorted
obsolete BS spewed out each evening. What else is new folks ?

In the beginning, long long ago, there was a guy living on the Isle of Man who designed a noise reduction box that worked by using a small sense antenna to pick up more noise than signal and phasing it to cancel the noise coming in on the "real" antenna.

This was reverse engineered by Doug DeMaw, who wound up making a little PC Board to do this job and selling a few of them. Coming into the present century, MFJ made a similar package and marketed it, but apparently no longer does. (Or else they hide it in their catalog very well).

If anyone can tell me their part number of that unit, I'd be forever indebted, and would venture forth and try to locate one to give to a friend in Wales who is currently suffering the demise of his top band operation due to local interference. Better yet, if anyone reading this has one that they'd like to part with for money, I'd like to be introduced.

Regards
W4ZCB

With getting all the politics.

Romney just lost my VOTE. I have been a ham for 35+ years and working in emergency services for over 45 years he is a looser. NO, I will not vote for McCain either, and I'm a proud VETERAN.

Here's an MFJ version,
http://www.mfjenterprises.com/Product.php?productid=MFJ-1026

I have a Timewave ANC-4,
http://www.timewave.com/support/ANC-4/anc4.html

I don't know how the two compare but I'm satisfied with the ANC-4, it
doesn't completely null the noise but it makes a big difference in how
well I can copy. I use a 20' piece of wire for the sense antenna.

Good luck to your friend, best wishes to you,
Galen, W8LNA

Cecil:

If you do nothing else, check out this youtube link:

http://youtube.com/watch?v=s08RJ2_o_MM

A man with a rational mind does much to restore faith in America. He speaks of the "insanity" running rampant in America ...

Better yet, use the search on the youtube page and search for all the
vid clips on Ron Paul.

Regards,
JS

you didn't say what freqs you wanted it for .... the JPS ANC-4
works between 500 khz to 80 mhz.

I 've used several of these from time to time and they work only "
somewhat " OK. when tuned to eliminate severe noise , they will
reduce or clip the signal as well. I think you will feel they are a
bit pricy for what they deliver ....

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=250206796968

just my experience with these ....

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
-= why won't the British police do their job and put a stop. to it? -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
```

The British police. obviously do know what is taking place. Besides my interpretations of what individual officers have said. which forces that conclusion, it would be inconceivable for them to. be unaware of something on this. scale.

If they know, then they. will know that the abusers have broken laws in the UK and. abroad. Recently the UK introduced laws against electronic spying which carry a penalty of several years jail if caught.. If the police know illegal harassment is taking place, and do nothing about it, then they. are failing in. their responsibilities.

Last Easter (1995) I went into the. local police station in London and spoke to an officer. about the harassment against me. But I couldn't provide tangible evidence; what people. said, in many cases years ago, is beyond proof, and without something to support my. statements I cannot expect a police officer to take. the complaint seriously.

The current situation with regard to the. police is not one which allows a breakthrough in dealing with the problem.. On the one hand, most individual officers at a local police station may not know. about the ongoing assaults, so a complaint at that level will not yield results. Yet the. police as an organisation do know of the harassment, and. they must be aware that a complaint has. been made at a police station. So it is clearly their duty to take preventative action against the. continuing molestation, but because the criminals are operating on. behalf of a state agency, the police are not carrying. out their duty.

-=-
-= abuse in set-up situations and in. public -=
-=-

Strangers in the street. have recognized me on sight many times, and shown awareness. of the current thread of abuse. To give you one example, in 1992 I was seriously ill, and a manager at work somewhat. humorously said that "it wasn't. fair" that people were bullying me. A few days later, I attended for the first time a clinic in London as an outpatient,. and on my way out was accosted by someone. who asked if "they had paid my fare", with emphasis on the. word "fare". He repeated the word several times in this different context; that they should have paid my "fare", each time. emphasizing the word.

For two and a half years from the time their harassment started. until November. 1992 I refused to see a psychiatrist, because I reasoned that I was not. ill of my own action or fault, but through the stress caused by harassment, and that. a lessening of the illness would have to be consequent to a removal of its immediate cause, in other words a cessation. of harassment. I also reasoned that. since they were taunting me with jokes about mental illness, if I were. to seek treatment then the abusers would think that they had "won" and been proved "right". Remember,. the constant theme of any persecution is, "we must destroy you because. you're X", whether X is. a racial or other attribute. In this case the X was "we persecute. you because you have brain disease". The similarity of this logic to Nazi attitudes. to the mentally ill is striking.

The same. manager who'd said "it wasn't fair" asked me in winter 1992 why I didn't seek help from a. psychiatrist; was it, he asked, because "they would think they. had won" if I sought treatment? That was something I'd never said at work... again, taken separately it proves. nothing, but many such things over. a period of months proves conclusively that people in the company knew what was going on, and in quite. a lot of detail.

Usually harassment. in public lacks the level of finesse of "paying your fare". Most people's imagination does. not go beyond moronic parroting of the. current term of denigration. That is not surprising given the average level of the abusers; if they do not have. the intelligence to distinguish wrong from right then neither will they have the. capacity for anything other. than mindless repetition of a monosyllabic term calculated to fit into their. minds.

The first incidents of verbal assault. in public were in again in the summer of 1990, although they increased in frequency and venom with. time. In July 1990 the first public incident occurred on. a tube train on the Northern line. Two men and their girlfriends recognised me; the women sprang to. my defence,. saying "He looks perfectly normal, he doesn't look ill". Their boyfriends of course knew better, and followed the party line;. one of them made reference to. an "operation", apparently to work at the tube station but implicitly to a visit that I had. made to hospital a couple of weeks previously.

In August 1990 going home from college, soon after getting on. a tube train at Gloucester Road I was followed. by a group of four youths, who started a chant of abuse. That they were targeting me was confirmed by. other people in the carriage, one of whom asked the. other "who are they going on at, is it the bloke who just got on?" to which the second replied "yes,. I think so". I was tempted to reply, but as. in every other instance the abusers are enabled. in their cowardice by physically outnumbering the abused; any confrontation would result in my being beaten up, followed by. a complaint to the police that "he. attacked us", and of course he's ill, so he must have been imagining that we were getting at him. Shitty,. aren't they?

But the shittiness of the four youths on the tube train is. as nothing compared to the episode on the National Express. coach to Dover in the summer of 1992.. While going on holiday to the Continent I was verbally set upon by a couple. travelling sitting a few rows behind. The boy did the talking, his female companion contributing only a continuous. empty giggling noise. He spoke loudly to ensure other people. on the coach heard, always about "they" and "this bloke". but never naming either the abusers or the person he was talking about. He. said "they" had "found somebody from his school, and he was always really stressed. at school". They must have dug deep to find enemies there; perhaps someone who dropped. out of school, someone who didn't do too well later, who was jealous and. keen to get their own back? The boy also said "he was in. a bed and breakfast for only one night and they got him".. By a not unexpected coincidence I had been in a B&B in Oxford a week previously, which had been booked from work;. other things lead me to the conclusion that the company's. offices were bugged for most of the 2 1/2 years. that I was there, so "they" would have known a room in the. B&B had been booked. (But I'll bet "they" didn't tell the company's managers their offices were. bugged, did they?).

After a few minutes of this I went back. to where they were sitting and asked where. they were travelling. The boy named a village in France, and the. girl's giggling suddenly ceased; presumably it permeated to her brain cell what the purpose of the boy's abuse. was.

This and other set-up situations are obviously calculated to. provoke a direct confrontation. which would bring in the police, with the abusers claiming that they were the. ones attacked. Again in 1992, outside the house where I was living in Oxford I was physically. attacked by someone - not punched, just grabbed by the coat, with some verbals. thrown in for good measure. That was something the people at work. shouldn't have known about... but. soon after a couple of people were talking right in front of me about, "I heard he was attacked". The. UK police have a responsibility for preventing assault occurring, but they do not seem. to take any interest in meeting that responsibility.. I suppose their attitude is that harassment does not come within their remit unless it involves physical assault,. and they will only become involved once that happens. That is of course. quite the wrong attitude for them to take, but. as I now understand, the police investigate only the crime they wish to investigate; if they. do not take your complaints seriously then there is nothing you can do to. make them take. action.

-=-
-= purpose in publicizing it; censorship. in uk.* newsgroups -=
-=-

The postings to uk.misc newsgroup generated a very. defensive reaction from Usenet readers in the UK.. So much so, that they tried strenuously to suppress what was being said, both by breaking the rules. of netiquette in their responses on. the forum, and directly by action to revoke the account from which the. postings were issued.

Yet the postings were within the normal. boundaries of behaviour for uk.misc, and other less. partisan spectators did not see justice in the censorship which was. effected, as the following excerpt shows;

:Karen Lofstrom. (lofstrom@lava.net) wrote
:>It does seem that the frequency and the size. of his posts are
:>approaching net. abuse. However, IMHO, they aren't quite there yet. If
:>his postmaster were to act in this. instance, it would raise troubling
:>censorship. issues.

The inescapable conclusion. of the censorship effected on the uk.* newsgroups is that the British are. intent on their wrongdoing remaining concealed,. and therefore seek to subvert and suppress freedom of speech, not only in their. own country where the media shows xenophobic bias and bile against all perceived enemies. within and without, but also in other countries which have their own statutes to guarantee the. basic human right of. free speech.

It is absolutely necessary. to bring their hate campaign out into the open where it can be placed under scrutiny and the harassers seen for. what they are.. That is the only way of making it impossible for the security services to carry it out. There is a wider. dimension, though. Xenophobia as demonstrated by British people and institutions over the last few. years belongs to the same stable as racial hatred. In. one case, two youths on a Tube train made that racism explicit by referring to their. victim as a "soft. toy, not up to British Standards". Doubtless others victimize partly on the. basis of race (isn�t it odd that they chose to torment someone who is not ethnically English?) while. expressing their abuse in terms of another genetic attribute, namely mental illness.. All xenophobia on a genetic basis is wrong, but while racial insults are. illegal, abusing the mentally ill is neither against the law nor subject. to similar condemnation when it is. exposed.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

-= my response to the harassment. -=

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

My first reaction in. 1990/91 was to assume that if I broke contact then they would not be able to follow and would lose interest. So. I did the things that have been. suggested by other people; I sold my television, stopped listening to the radio and tried to withdraw away. from the sources of abuse as much as possible.. I reasoned that they must have more important things to. deal with and that normal people would simply leave me alone if it were made difficult for them. to continue their harassment.

I reckoned without the sheer vindictiveness of. the abusers. They did not let. up but instead "got to" people around me, mainly people at work, to do their dirty work for them. I went to see my GP, who refused to believe. what he was being told, and. refused to direct me on to anyone who could be of practical assistance.. It was not until three years had passed that the GP admitted the matter was outside his competence and. suggested going to the police.

In the summer of 1994. we called in counter-surveillance experts from a private detective agency. to sweep our house and telephone for bugging devices. They conducted a thorough search and found nothing; but. as noted above, since the existence of surveillance was. being forced in my face by the harassers, you would expect them to have. taken the possibility of a counter-surveillance sweep into account. when planning the type of devices to be. employed.

In Easter 1995 I made. a complaint to my local Police station in London, but the police have. not expressed any intention to do anything about the continuing harassment ("we're not saying. it's happening and we're not saying it isn't happening" were the. words used). I think the officer I spoke to at. Easter wasn't aware of it happening, although other members of the police. force obviously do know.

From April. 1995 until the present time the matter has been discussed in a lot of detail on the Usenet (Internet) "uk.misc" newsgroup. That. discussion has given birth to the article which you. are now reading. My hopes in posting to Usenet were. that wider publicizing would discourage the security services from continuing. their harassment, and "draw people out" into concurring with the truth of what was being said. Neither. of those have followed, but the. discussion has served a purpose in allowing this structured report to be. created.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-=. MI5: methods and tactics -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

They deliberately set out to harass in a way. that would resemble the symptoms of schizophrenia, so that any report of. the harassment would be taken as indicating. mental illness and "treated" accordingly. They never show their own faces; they only work through. proxies, in the media, among the public, and by manipulating people in the workplace.. Since they do not declare their identity there. is no evidence to initiate legal action against the security services or anyone else.. The only people you can prosecute are the. proxies and they will deny knowledge of any conspiracy.

By repeatedly humiliating and abusing the. victim, they induced mental illness. This is the worst. form of human rights violation: making any statement of. the harassment appear to be symptomatic of the illness which they cause through the. harassment. That this can happen, and people collude by. silence, is absolutely horrifying.

From the beginning in June 1990 they set a. pattern of harassment which they have followed without. change for the last six years. They paint me as a "threat" to which people. must "react" (shades of Nazi persecution methods), while simultaneously. portraying their hate campaign on which they have spent over a million. pounds of taxpayers� money as a "joke".

The. MI5 that breaks the law with the silent complicity of the police is the same agency that is. now seeking a role in the fight against crime. Perhaps the real joke is the proposed involvement in the. implementation of justice of an. organisation which commits criminal acts with secrecy and disinterest for. the legal process.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= MI5: methods and. tactics -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

They deliberately set out to harass in. a way that would resemble the symptoms of schizophrenia, so that any report of the. harassment would be taken as indicating. mental illness and "treated" accordingly. They never show their. own faces; they only work through proxies, in the media, among the public, and by manipulating people in the workplace. Since they. do not declare their identity there is no evidence to. initiate legal action against. the security services or anyone else. The only people you can prosecute are the proxies and they will deny knowledge. of any conspiracy.

By repeatedly humiliating and. abusing the victim, they induced mental illness. This is the worst form of human rights violation: making. any statement of the harassment appear to. be symptomatic of the illness which they cause through the harassment. That this can. happen, and people collude by silence, is. absolutely horrifying.

From the beginning. in June 1990 they set a pattern of harassment which they have. followed without change for the last six years. They paint me as a "threat" to which people. must "react" (shades of Nazi persecution methods), while simultaneously portraying their hate campaign on. which they have spent over a million. pounds of taxpayers� money as a "joke".

The. MI5 that breaks the law with the silent complicity of the police is the same agency that is now seeking a role in. the fight against crime. Perhaps the real joke is the proposed involvement in the. implementation of justice of an organisation which commits criminal acts with secrecy and. disinterest for. the legal process.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= why. the security services? -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
```

You may ask,. why do I think the "they" referred to are the security services? Is there any evidence that there is. a single source, as opposed to a loosely based "whispering. campaign" amongst many people? Even if there is a single source, is there any evidence that "they". are professional "buggers" as opposed. to amateurs, or perhaps people working for a privately funded. organization?

a) As to the question of a single source. versus something more fragmented; it is quite obvious that there is a single source. from the way the campaign has been carried. out. Since things have been repeated verbatim which were said in my home, there. must be one group which does the watching and listening. Since. on several occasions (mainly during travel) people have been planted. in close proximity and rehearsed in what they were to say, it follows that someone. must have done the planning for that, and again a single source is. indicated.

b) So why couldn't it be amateurs? Why couldn't. it be a private organisation, for example a private detective agency paid. to manage the campaign and undertake the. technical aspects? Some detective agencies are unscrupulous as has been proved on the occasions. in the past when they've been exposed or caught; they. too can have access to the bugging technology deployed; and there are reported cases. of MI5 paying private eyes to do their dirty work (against peace campaigners and. similar enemies of the state) on the understanding that if they were caught then they could. deny all knowledge. Why. couldn't that be the case?

The main. factor pointing to direct security service involvement (as opposed to amateurs or MI5 proxies). is the breadth of their access to the media in particular, and the fact that the television companies are. so involved in the campaign. The. BBC would not directly invade someone's home themselves, since it would not be within. their remit to allocate personnel or financial resources to do so. An organisation of their stature would not. take part in a campaign set up by private sources. The. only people they would take material. from would be the security services, presumably on the assumption that if. the cat ever flew out of the bag yowling it would be MI5 who would take. the consequences.

State. sponsorship for these acts of psychological terrorism is also indicated by duration; support for over. six years for a team of three or four people would be beyond the. means and will of most private sources. The viciousness of the slanders and personal denigration also. points to MI5; they traditionally "protect". the British state from politicians of the wrong hue by character assassination, and in this case. are using their tried and. tested methods to murder with words an enemy they have invented for. themselves.

And there are precedents.. Diana and Hewitt were alleged to have been filmed "at it" by an Army intelligence team which had. operated in Northern Ireland, these allegations were made by someone called Jones. who had been on. the team. His statements were denied by the defence establishment who tried to character-assassinate by. describing him as the "Jones twins". Funny how if. you tell the truth, then you must be ill, isn't it? Thought only communists. behaved like that?

Hewitt later said that he'd been. spoken to by someone in the army who revealed the existence of videotapes of him and. Diana, and that the tapes would be published if any. attempt was made by them to resume their association.

-=-=-=-=-=-=-=-=-=-=-=-=-=
-= harassment at. work -=
-=-=-=-=-=-=-=-=-=-=-=-=-=

Once I stopped watching television and listening to the. radio at the end of 1990, "they" had to find other ways of. committing abuses. So they took what must. be for them a tried and tested route; they get at you by subversion of those around you. Since they wouldn't be able to do that with my. family or friends, that meant getting at people in the workplace to be. their mouthpieces. and do their dirty work for them.

They supplied my employers in Oxford with details from what was. going on in my. private life, and what I and other people had said at my home and accommodation in Oxford. So people at. work repeated verbatim words which had been said. in my home, and repeated what I'd been doing recently. Often the most trivial things, the ones from your domestic life,. are the ones which hurt most. One manager in particular at Oxford continuously. abused me for ten months with verbal sexual abuse, swearing, and. threats to terminate my. employment. After ten months I was forced to seek psychiatric help and start taking medication, and was away from work for two. months. I spoke later with a solicitor about what had happened at that company;. he advised it. was only possible to take action if you had left the company as a result of harassment, and such an action would have to. be started very soon after leaving.

Over a year later. the same manager picked on another new worker, with even more serious results;. that employee tried to commit suicide with an overdose as a result of the ill-treatment, and was forced to leave. his job. But he didn't take action against the company, either.. Abuse at work is comparable to that elsewhere in that. tangible evidence is difficult to produce, and the. abusers will always have their denials ready when challenged. And even if a court accepts what you say happened, it. still remains to prove. that abuse causes the type of breakdown I had at the end of 1992. In a recent case before a British court,. a former member of the Army brought a case against others who had. maltreated him ten years previously. Although the court accepted. that abuse had occurred, it did not agree that depressive illness necessarily followed,. and denied justice to the. plaintiff.

Ch19 wrote:
> I threw out all of my Weller irons, all a bunch of crap.

I've had two WCC100's in my shop since they came out, probably more than ten years now. I've never had any problems with them, running them each 10-20 hours/week, doing stuff from tiny surface mount to some jewelry soldering to the occasional connector pin with #12 wire. I don't expect them to last forever but I do take care of them and don't leave them on longer than I need to.

Commercial outfits I've worked for have had similar experiences with the more expensive Weller irons, usually running them 40+ hours/week. I've seen them last for years this way, and yes, I've seen a few fail but the former well overshadows the latter.

Wellers are probably no better or worse overall than anything else.

That's a telephone, isn't it?

And, "amateur radio" without the radio is just "amateur."

The funny thing is that in the sixties, there was an article
in "CQ" about DXing with a telephone. Showed photos of DXpeditions
in exotic places. I seem to recall there was a followup. I can't
remember if it was portrayed as an alternative, or what to do
after amateur radio was eliminated.

The punch line is that the article(s) were in the April issue.

It's not a "contact" when there's a wire connecting the two ends.

> ... but then, I don't suffer opium dreams ...

Are you sure?

All

I have managed to get my signalink box working very well with the
706MkIIG but have found that it causes a weird side effect in that
when
the cable is plugged in the back of the rig it heavily attenuates my
voice so that people struggle to hear me when i am speaking on the
mic.
To be heard i need to turn up AGC to 10. When unplugged the lead i can
leave at normal setting of 5. Since everything else is working ok has
anyone else experienced this problem or got any ideas.

Many thanks

Andy

Ed

Its a box that connects to via TNC and allows digital modes to be
used. See www.tigertronics.com/slusbmain.htm

Thanks

Andy

Yup - sure have but no response yet so tried asking here - this
message board in 99 out of 100 times finds me an answer to the lastest
of my ongoing radio problems. Why is it that the life of the radio
amateur is going from one technical problem to the next? I guess its
because we get easily bored and have to fiddle or add new kit. Still
keeps me out of trouble.

Andy

Andy,
It sounds like attaching the signallink box double terminates the
microphone. I don't know if there is a way to adjust the output
impedance on the signalink box, but you might try raising it. That
means that you will also probably have to raise its output level as
well. I have one of the signalink boxes on order and will let you know
how I interfaced it to my 706 when I get it.

Andy,

I also have a SignaLink USB, and find it works well with my Yaesu.
However, compared with 3 other sound card or external units I have
used, it seems to have a much lower impedance. The result is that it
loads down both the input and output. Obviously, how much depends on
your rig, and where you are connecting it.

I have an external switching box which I built up to allow the use of
some other devices with the rig, which of course includes an OFF

```
position.  In your case, probably something as simple as a double pole
toggle switch built into a small box would work.  It wouldn't hurt to
switch both the RX and TX audio.

Most of the April issues had a spoof article.

I'd rather have a real rig that uses radio waves and once I have the real
rig, its free (except for electricity) for a long long time.

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

Strange what RS came up with to try and make money, except how many of these would you need to sell to make money...except really neat things makes you come into the store to look around.

Neat meter though.

greg

Hi,

I would strongly suggest that you ask at the official forum here:

http://forums.ham-radio.ch/

Also, while version 3.4 is the official production release, it is really very old. Try the current beta, which despite the name is effectively the production release. You can download that here:

http://www.ham-radio.ch/kits/beta/3.5/

The latest version, 1682, is solid, and has several fixes over the 3.4 version. Generally, when you have a problem, one of the first suggestions is to upgrade to the latest version.

Cheap Maplestory Mesos   Maple Story Mesos   Buy Mesos   Cheap Mesos   Buy Maplestory Mesos

Maple Story Mesos Promotion !
Maple Story Mesos Promotion ! Check out our great prices on Maple Story Mesos! We guarantee the we have the lowest prices on Maple Mesos on the market, contact our live support for further details.

Prices of Mesos are Slashed again! OGEWORLD has unbeatable price on Maple Story Mesos. You are buying Mesos directly from our production team, not from resellers, without hacking, and without cheating!

Delivery in minutes!
No Waiting, No Bidding. OGEWORLD,COM - Direct Sale Service offers you the best and fastest way to buy Maple Mesos. You will have the best Maple Story Mesos money can buy at the lowest prices.

Lowest price, live customers support, flexible payment methods and instant delivery are the reasons that make us different from other Maple Mesos supplier.

If:
* You don't want to talk to somebody who doesn't understand you.
* You don't want to wait for email reply.
* You don't want to make payments through only paypal.
* You don't want to be ripped off.

We are here to help!

Due to increasing number of fraudulent orders, we will no longer accept payments made through echecks, unconfirmed addresses, or unverified accounts with paypal. However, understanding the constant needs of our customers, we are working to add direct credit card payment and money order payment methods. As a reminder, we still accept all moneybookers transactions. In addition, for those customers who can't find another method of payment except for echeck, we are willing to work with you through subjecting the transaction to OGEWORLD's Higher Security Processing. However, this may take longer than usual processing time, and would require that the echeck is cleared before any delivery can be made.

We are now creating a trust list. All customers who had bought Mesos and/or services from us without payment issues will receive priority service.

Mesos Bulk Order?
We offer discounts for larger Maple Mesos purchases, contact us at for further details. We guarantee OGEWORLD has the lowest prices on Maple Story Mesos!

Speedy Delivery!
We will deliver Maple Story Mesos to you as soon as possible.

Gettysburg, Pennsylvania 17325-7245

VIA CERTIFIED MAIL - RETURN RECEIPT REQUESTED

June 1, 2007

William E. Westley, Jr.

10451 Maverick Street

New Port Richey, FL 34654

RE: Warning Notice: Amateur Radio License AF4GC; Case #EB-2007-3050

Dear Mr. Westley:

The licensee of the W4FLG repeater system has requested in writing that you refrain from use of the repeater. The letter was issued as a result of your failure to follow operational rules set forth by the licensee/ control operators of the repeater system for their users. You were previously requested verbally to refrain from using the system, but have apparently ignored both verbal and written requests.

The Commission requires that repeaters be under the supervision of a control operator and not only expects, but requires, such control operators and licensees to be responsible for the proper operation of the repeater system. Control operators may take whatever steps are appropriate to ensure compliance with the repeater rules, including limiting the repeater use to certain users, converting the repeater to a closed repeater or taking it off the air entirely.

Please be advised that we expect you to abide by the request to stay off the W4FLG repeater and any other such request by a repeater licensee, control operator or trustee. If you use the repeater again after receipt of this letter, we will initiate enforcement action against your license, which may include revocation, monetary forfeiture (fine) or a modification proceeding to restrict the frequencies on which you may operate AF4GC. Also please be advised that use of the output frequency of the repeaters to interfere with their operation would be considered deliberate interference. There are numerous frequencies available to you for simplex operation.

We note that your license expires October 21, 2007. You are advised that renewal will not be routinely granted unless this matter is resolved.

Please call me at 717-338-2502 if you have any questions about this matter.

Sincerely,

W. Riley Hollingsworth

Special Counsel

A friend of mine (W0ILJ) , lost everything he owned , except the clothes on his back and his car , in July 2007 , due to a flood and chemical spill DR # 1711 , in Coffeyville , KS. No insurance , since he was in a 500 year flood plain.

He is wanting to replace a few key items and the top of his list is a set of R-14 phones.

Please state condition , price and method of payment .

THANKS ,
73 ,
Charlie (W5COV)

When you say R-14 phones, do you mean an HS-23 or HS-33 headset?  The
R-14's (and ANB's)are just the elements for these typical headsets.  The
R-14 was also used in cloth flight caps, etc.  I may be able to assist.

I just wanted to let everyone know that I just posted some information
about a scholarship program that is open to apply for if you are a
licensed ham radio operator and you want to continue your studies

http://hamming-it-up.blogspot.com/2007/12/scholarship-program-for-amateur-radio.html

This is an informational post for owners of the Weller WCC100 soldering station.
Some Elecraft builders have used this soldering station for building their kits.

This is the BLUE colored station that was sold by Weller until 1999, when it was discontinued

The Weller WLC100, which is an ORANGE colored station, is a totally DIFFERENT station.
The WLC100 is NOT temeprature controller uses an OEM light dimemr module) and uses the Weller "ST" series of soldering tips. Information on the WLC100 model, can be found here:
http://www.uoguelph.ca/~antoon/circ/wlc100.html
===============

The Weller WCC100 is a temperature controlled soldering station that Weller sold in 1990s,
until it was discontinued by Weller in 1999. I have found some vendors that still have a few of these stations in stock. The WES51 soldering station, introduced in 2002 replaced the WCC100 model.
The WCC100 station uses the Weller "ET" series soldering tips, which are readily available and used on a number of current Weller soldering stations (WES51, EC series, Silver Series).

I am collecting pertinent documentation for this Weller station (including the Tech Sheet) that will eventually be available electronically (likely through BAMA).

The WCC100 soldering station is a line voltage (120 VAC) station.
This station has NO isolation transformer and the control board is connected

directly to line voltage (no fuse, surge protection or safety capacitor).
The control board monitors the thermocouple (temperature sensor) and 120 VAC heater.

Parts numbers for Weller WCC100 solder station

WCC101 - Replacement Iron w/ETA tip
WCC102 - Replacement Heater (120 V)
WCC103 - Temperature Sensor w/Spring
WCC104 - Sponge
WCC105 - Spring and Funnel Assembly
WCC106 - Control Board
WCC108 - Weller Barrel Nut
SW120 - Switch (Carling LRA series illuminated rocker)
ET series tips - widely available and used in Weller WES51, "EC" and Silver Series stations
====

WCC102 heater has a resistance of about 348 to 350 ohms at room temperature (27 C)

WCC103 temperature sensor has a resistance of about 1 to 2 ohms at room temperature (27 C)
This resistance increases (thermocouple) as the temperature rises -- the control board then compares this to the temperature set by the user (potentiometer). A "zero-crossing" circuit then turns off the heater (usually via a Triac or transistor switch) -- when the temperature is reached and turns the heater back on, when the temperature drops below this point.

I acquired a WCC100 soldering station, via eBay, that was non-functional in December 2007.
The temperature sensor (WCC103) had failed (open - infinite resistance) in this station's iron. Some parts are becoming more difficult to obtain for this station, since Weller discontinued it over 8 years ago.

IF you have a dead WCC100 station, now is the time to get it repaired, unless you are scrapping it
(I will accept these donations).

These Distributors have Weller WCC100 parts "in stock", as of December 2007

Allied Electronics
http://www.alliedelec.com/default.asp

WCC103 Temperature Sensor (115 units in stock)
Allied part number: 984-2267, price: $ 7.30
==
Santa Cruz Electronics
http://www.santacruzelectronics.com/forms/Query.cfm?q_class=TOOLS%20

WCC102 - Replacement Heater (120 V) - $ 21.34
WCC104 - Replacement Sponge - $ 1.50

WCC106 - Control Board - $ 5.74
WCC108 - Weller Barrel Nut - $ 7.52
==
GC Electronics (available at any GC Electronics reseller or retailer)
SW120 - Replacement Illuminated Rocker switch
GC Electronics part number 35-3740 - $ 3.00

Carling Curvette LRA series - LRA211C.
LRA211: 125V Neon Lamp; 16A 125VAC; .250 QC Tabs;
OFF-NONE-ON (SPST); Red Transparent, Black bezel.

Does anyone have/know the wiring configuration of the connections on
Yaseu Portable battery packs?

Specifically I would like to connect an external power source to one
of my portables (FT-51r) and would like to look at a schematic before
making connections incorrectly and cooking my radio.

I also have the following Yaesu portable models FT-411, FT-530, and suspect the batteries have similar wiring configurations.

I have checked the Internet, Yaesu, and after market battery outfits with little usable response.

Thank you in advance for any assistance you may be able to provide.

****

I am also looking for the following accessories to allow connecting external power to my Yaesu Ft 51r Ham radio.

EDC-12 Allows connecting to a cigarette plug in a car or power supply.

FBA-14 Allows operating the radio on four AA batteries.

I would also like to buy a dead battery for the same radio to tear apart and build my own adapter.

Depending on what you have I might also be interested in other accessories for my radio.

Thank you.

The Weller WCC103 temperature sensor is actually an iron-constantan thermocouple (possibly Type J), although Weller used Type K thermocouples for its EC station series .
Sensitivity believed to be about 50 �V/�C
The relationship between temperature and voltage produced is NON-Linear.

What is a thermocouple sensor?
A thermocouple is a sensor for measuring temperature. It consists of two dissimilar metals, joined together at one end. When the junction of the two metals is heated or cooled a voltage is produced that can be correlated back to the temperature. The thermocouple alloys are commonly available as wire.

When replacing the WCC103 sensor the leads MUST be correctly installed or the iron stays on continuously and eventually overheats.
The Iron (magnetic) lead connects to the RED wire
The Constantan (copper-nickel alloy/non-magnetic) lead connects to the YELLOW wire

MI5 Persecution: Molestation. during Travel

MI5s persecution of me varies in intensity. Since. 1990 it has been steady for. perhaps 80% of the time; there was a notable quiet period in 1993, and another quiet. period in Jan-Feb 1995, as well as a hiatus in the first two months of 1999. It puzzles me that. they cease and restart, seemingly without any logic or reason. But one aspect. of MI5s activities against me which is relatively predictable is this weeks articles topic,. which is Molestation during Travel. Almost every time I cross the. Atlantic, go to the. Continent or even try to enjoy a holiday in this country, you can bet that MI5 will be there doing their. utmost to wreck it all.

This aspect. of the harassment is particularly relevant as I will be travelling. to Europe again in a months time, with naturally the Minidisc recorder in tow; so it will be interesting to see if I can. record the abuse which will almost certainly take place, either on the Tube going. to the airport, at the airport, on the flight, in the terminal building. - MI5 have previously. instituted instances of abuse at each of these locations, so well see how much taxpayers money they waste. this time, and whether it will prove possible to capture their abuse on. minidisc.

Read about. the MI5 Persecution on the Web

June 1992. in Polands mountain resort of Zakopane

The persecution started. in June 1990, and for the first two years I stayed in the UK apart from a couple of brief day. trips to Calais. By the summer of 1992 Id had enough of being cooped up in England. with abusive fellow employees egged on by an abusive secret police service, and decided. to spend 10 days in southern Poland, on what was intended to be a. holiday at the mountain resort. town of Zakopane.

Unfortunately the psychopaths of the Security Service. were not willing to allow me. to enjoy a holiday in peace and quiet. The journey to Zakopane was. by coach from the meeting point at Londons Victoria coach station (National Express) followed by ferry followed by another. coach across Europe. As we left Victoria. a youth and his girlfriend started a loud tirade. of abuse directed at "this bloke", where the "bloke" was never named, but it was very clear that the "bloke" was myself. The. youth said "they" had "found somebody from his. school, and he was always really stressed at school, a real psycho". Again, the label "they" was. not elaborated on,. but it was clear that "they" = the persecutors from MI5. The boy also said, "he was in. a bed and breakfast for only one night and they got him". By a not unexpected. coincidence I had been in a B&B in Oxford a. week previously, which had been booked from work; other things lead me to the conclusion that. the company's offices were bugged for most of the 2 1/2 years that I. was there, so "they" would have known a room in the B&B had. been booked. After a few minutes of this I went back to where they. were sitting and asked where they were travelling. The boy named a village in France, and the girl's giggling suddenly ceased; presumably. it permeated to her brain cell what the. purpose of the boy's abuse was.

It is now very clear to me that. MI5 were trying to have me incarcerated, assaulted or killed on this trip across. Europe. The degree of verbal violence inescapably leads to this conclusion. When we arrived at. our destination, it became clear that many people, both in our tour. group and its guide, and among. the ordinary residents of the town, knew there was a movement under. way to "get" me. MI5 employed many people and significant resources for an action. which they knew would only take a maximum of ten days.. A commercial operation would never have felt able to waste such resources on such an unproductive. and temporary action; only a state-sponsored,. taxpayer-funded entity like the Security Service would be able to. be so wasteful.

To give some examples of what happened in those ten days;. I was walking in some. woods outside the town, when a Polish woman, looking at me, said the English "shit" in a strongly Polish-accented voice. For the. first three years 1990-92. MI5 had been trying to force this word on me. Another example; I was. walking near my "hotel" when a mother said laughing to her child,. "a wiesz ze to prawdziwy wariat" which means "you know hes a real madman". And the "TV reacting" happened there too; on. Polish TV, a bemused looking journalist. said to another, "to jest sprawa Anglikow", which means "its the concern of the English", in. other words, none of our business, despite what. the English are trying to force down our throats.

Just before we left for. home, I went with some others from our group to a nearby bar. There a man shouted at me the. same sexual obscenity which MI5 have constantly thrown at. me these last three years. I think MI5 try to justify their various terms of abuse by repeating them at. me until I say them, either while conscious or. while talking in my sleep; and then they seize on my saying those words. to "prove" that the obscenities are "my fault", et cetera. This rather stupid. reasoning of theirs can actually be seen as indicative of the psychopathic condition attributed to them in. a previous. article; blaming the victim for the crime you inflict on him is how psychopaths. think.

Nor did the persecutors let up during the return trip. Returning. on the ferry over the channel, a rather. insalubrious-looking guy talked to his mates about "and you know this bloke, hes really mad you. know, hes really mad". On the National Express return coach to London, a group. of five or six young people started shouting at me. I slumped in my. seat and tried to avoid presenting a target, so they got ever more strident - "whats. the matter with you,. cant you hear us?" One of the other people who had been on the trip to. Poland asked them why they were shouting at me, and they said, "hes been to. Cambridge", to which the co-holidayer asked them, "have you been to Cambridge?" presumably thinking they. were aggrieved fellow students, but they answered "no". Even after I left. the coach at Elephant and Castle abuse continued; in the tube. station, two kids started throwing abuse at me; one of them said to the other, "and you. know he works?" to which the other answered. "yes".

Immediate. Aftermath of November 1992

As you. will know from previous articles, my manager at OCG - ARIS/Oxford, Mr Mitchell, induced. a mental breakdown in me in the months leading up to Nov/92. The. diagnosis was regarded by the persecutors as a victory for them, because few if any people give credence. to allegations of harassment when they are. made by somebody suffering from schizophrenia. There is also a. bias against the mentally ill, an "institutionalised bigotry" in society comparable to the institutionalised. racism against blacks.

However, MI5. did not let up on persecuting me following Nov/92. In December 1992 I flew by charter jet to Alicante in Spain. for two weeks recuperation. MI5 planted one of their people on the flight, a. youth who tried to start some noises that "hes a nutter". One of the. other passengers replied,. "oh hes a nutter is he? oh well!" and the youth shut up and said nothing for the. rest of the flight. I think it would be fair to say that the youth on the flight was embarrassed by what he. had been asked to do. in making the flight "uncomfortable" for me; he sounded defensive rather. than aggressive.

My first trip to Canada in. June 1993

Ive already covered. this in a previous article so Ill just give a brief summary here. On 10 June 1993 I flew British Airways from Heathrow. to Torontos Pearson Airport. On de-planing. from the aircraft, one of a group of four fellow passengers looked at me and said, laughing,. "if he tries to run away well find him".. It was quite obvious that these four men were the ones who had. been harassing me since 1990.

I did nothing to. apprehend them or bring this incident to the attention of the airport authorities, mostly because this was my very first visit. to Canada, and the last thing I wanted. was to get into a dispute before I had even finished disembarking. In retrospect, I. can see this was a terrible mistake; I should have made every effort to detain. and identify these people.

Subsequently. I have made numerous attempts to obtain the names of these people from British Airways. passenger lists, by talking to BA, through a lawyer in Ontario, through a solicitor in England, through. the UK police, and also through private detectives in the UK. But. all my efforts have come to nothing. BA. have told me they keep passenger lists for a period of seven. years, so they will still have the list for this 1993 flight. I did not see or hear. anything during the rest of my visit to Ontario in 1993 which would have lead me to believe that I. was being watched or followed.

Journey across Canada in. summer 1994

As I think Ive already said in previous articles I. emigrated to Canada in late May 1994. For six weeks between late May 1994 and early. July 1994 I travelled. across Canada from coast to coast, starting in Toronto, visiting various cities and ending up in British Columbia. I saw. this both as something of a holiday, and the chance. to get to know a little better my adopted. country.

As you can guess, MI5. followed me everywhere I went during these six weeks. In Toronto, where I started. this trip in late May, I was spoken about by one youth to another with. the words "hes an idiot", to which the other replied, laughing sympathetically,. "good luck to him".

A couple of days later I went to Montreal and stayed at the. YMCA downtown. As you can guess (this. is all so predictable, isnt it?) MI5 followed me there and bugged my room at the YMCA. Not. only that, but they managed to. set-up an instance of "newscaster reaction" from a local television station; while I was watching. a Vermont TV news programme on the set in my room, the. woman reporter said, "well theyre just tired and they want to. go home", which sounds like a pretty unprofessional thing to say until you realise she was trying to say of me that I was the one. that was supposed to be tired, and they (ie MI5). wanted me to go home to the UK.

On the. bus journey across the North American continent, it was quite clear that MI5 were following me every step on the way. For the first. part of the journey they actually put someone on the bus with me, a youth who. said at me "that guys paranoid". and tried to incite other passengers to attack me. I stopped for a couple of days in Winnipeg in central Canada, and. on leaving the town heard on the radio a female. presenter ranting about "insanity! insanity!". It is. very tiring travelling such a long distance by bus; I took the. journey in two steps, each of about 36 hours; and it is especially tiring when you know MI5 are watching you. and harassing you every step of. the way.

When I finally got to Vancouver, MI5. instituted the usual harassment, in very short order. I was surprised how quickly they. were able to induce hatred towards me in elements of. the general populace; the Security Service must have employed a number of. agents and serious resources in a very short period of time; and for no real gain,. because I havent been back to BC for almost five years, so all their "work" appears to. be for nothing. In downtown Vancouver a street person said in front of. me, "theyre all talking about him". For a few days I. was staying at Pauls Guest House. (345 W.14th Ave); on the day I left, the owner Paul shouted at no-one in particular, "hes. going to Victoria" - which was quite accurate, I was indeed going to the. provincial capital Victoria on Vancouver Island. But I had not told anyone at the guest house. where I was going; I had only. mentioned to my parents back in England on the phone that I was going away from Vancouver. for a few days. Which leads me to suppose that MI5s bugging. of the phone in my parents house yielded the "intelligence" that. I intended to visit Victoria, and they had passed the information. on to Paul.

When I got to Victoria it was again obvious. that the persecutors were "doing their stuff" there as well. On the street I was identified. as being English, although I had not said anything so my accent hadnt. given me away; and. returning by ferry to the mainland, I was abused by a Canadian woman who said, "hes a. nutter! you can run but you cant hide". During my years in Canada I have never. heard the word "nutter" on any other occasion; I do not think it is. part of Canadians vocabulary; so the Canadian woman on the ferry, who was obviously talking about me, must. have been supplied with this word. by the English persecutors. And once I got back to Vancouver, staying at the Austin Hotel on Granville. St, I listened to a conversation in the apartment block directly opposite, and a. man saying, "hes paranoid, so thats as bad as it can be, so why are they. doing this. to him?".

Holiday in the States,. August 1995

By 1995 I was living in Canada, and in. August I went down the eastern seaboard to Florida and as far as Key West by car. As you can guess. (this is all so boring and predictable, isnt it?). MI5 followed me every step of the way. I can see in. retrospect that this must have been quite easy for them as they had my car bugged,. both on the inside to listen to anything that was said and what radio station I. was listening to, as well as what must have. been a tracker device installed to track it across long distances.

The first city I visited was. Philadelphia. In the old Congress Hall where the first US Congress assembled, the woman guide started referring. to my situation, saying that "all these people in Europe were watching. it", and they were "a little paranoid" at this 18th-century experiment. in democracy. Also I. had recently written a newsgroup post where Id described a (female) poster as "wet-nosed" (implying. "canine"), and a young girl in Philadelphia remarked, "so he. thinks were dogs?" There were two or three more incidents during this holiday in the. eastern States, including a radio station down near Miami, showing. "they" had tracked me all the way there, and were bugging. the inside of my car; but I didnt record the details and Ive. forgotten some of it now. Also down in Miami Beach a French tourist in a lift expressed support for me. with the words, "cest incroyable" ie.. its incredible, meaning that MI5s well-known actions against me were. beyond belief.

To go back a bit, in. about May/June 1995 Id visited New York, again by car, and was insulted several. times by people using the same words that had been used against me. in England. In Central Park, and elderly Englishman (not a real gentleman - but. then the Engish view of themselves as "gentlemen" etc is quite laughable) looked at. me and said "idiot". And while I was eating in. a streetside restaurant a New York youth started laughing and. said something like, "I cant believe it, hes actually here" - I think that was because I had. had an expressed wish to visit New York for some years before this,. although after this visit I wont be going there again for a. very long time.

Visit to Poland December. 1995/January 1996

In December 1995 I flew (BA again, unfortunately - every time Ive flown. BA one of these incidents has happened, presumably MI5 is happier. setting up harassment. on British-domiciled carrier) from Montreal to Berlin and travelled on to Poland to visit family. MI5. naturally harassed me in Poland during my brief stay. They followed me around and got. Polish people to. take part in the harassment. In one case two Polish youths talked in front of me saying in English (with. marked Polish accents), "fucked up men, fuck. you". There were also other incidents which I dont remember too clearly since it was some. time ago.

The return. flight connected through Heathrow, and in the transit lounge MI5 again set-up harassment against me. In Poland. they were talking their abuse in English, and in London. they set Polish people after me to speak in Polish; they. heard me on the phone to my father, and said "a wiesz ze to Polski wariat", in an almost sympathetic, inclusive. fashion (translation.. "you know hes a Polish nutter"). Once on the flight to Montreal I was again set upon by two English youths, one of. whom spoke and the other listened. The aggressive "fat bastard" youth said, "if he. wants to be a wanker" (its my fault theyre harassing. me, you see), self-justification that "hes a nutter". (so we have to keep on abusing him, because hes ill), as well as talking about the town in Poland. where I had been staying. He. also said, "he doesnt know who we are", but as already remarked. in a previous article, that was at best a half-denial of my guess expressed in internet newsgroups that the people after me. were MI5 - if anything its. a half-confirmation rather than a half-denial.

These incidents are still going on. You can hear digitised audio. files of abuse on a BA flight to Berlin in. 1998 on the Web at address

On this flight they were again attacking. my mental health; "paranoid, hes paranoid" and "nutter" are discernable. The last "during. travel" contact was at Ottawa Airport on. 21 July 1998, when "Alan Holdsworth" the psychopath MI5 agent, dressed as a vagrant, was. pacing aggressively in the departure. area. In three weeks I will again be travelling to Europe; we will see what. fresh acts of molestation MI5 perpetrate during this trip.

MI5 are Afraid. to Admit They're Behind the Persecution

MI5 have issued a formal denial. of any involvement in my life to the Security Service Tribunal,. as you might expect them to; but, more importantly, the. persecutors have never denied that theyre from the Security Service, despite. several years of accusations from my corner on usenet and in faxed articles. I am not surprised that the Security. Service Tribunal found "no determination in your. favour". I am however a little surprised that the persecutors have refused to. confirm my identification of them; by doing so, they implicitly. admit that my guess was right.

"No determination in your favour" says the. Security Service Tribunal

In. 1997, I made a complaint to the Security Service Tribunal, giving only the bare outlines of my case. I do not think it would have made. very much difference if Id made a much more. detailed complaint, since the Tribunal has no ability to perform investigatory functions. It can only ask MI5. if they have an interest in a subject,. to which MI5 are of course free to be "economical with the truth". A couple of months after my. complaint the Tribunal. replied that;

The. Security Service Tribunal have now investigated your complaint and have asked me to inform you that no determination. in your favour has been made. on your complaint.

Needless. to say this reply didnt surprise me in the slightest. It is a well established fact that the. secret service are a den of liars and the Tribunal. a toothless watchdog, so to see them conforming to these stereotypes might be disappointing. but unsurprising.

It. is noteworthy that the Tribunal never gives the plaintiff information on whether the "no determination in your favour" is because MI5 claims. to have no interest in him, or whether. they claim their interest is "justified". In the 1997 report of the Security. Service Commissioner he writes that "The. ambiguity of the terms in which the notification of the Tribunals decision. is expressed is intentional", since a less ambiguous answer would. indicate to the plaintiff whether he were indeed under MI5 surveillance. But I note that the ambiguity also allows MI5. to get away with lying to the question. of their interest in me; they can claim to the Tribunal that they have no interest, but at a future date, when it. becomes clear that they did indeed. place me under surveillance and harassment, they can claim their interest was "justified". - and the Tribunal will presumably not admit that in their previous reply MI5 claimed to. have no interest.

"He doesnt. know who we are"

In early. January 1996 I flew on a British Airways jet from London to Montreal; also present on the plane, about three or four. rows behind me, were two young men, one. of them fat and voluble, the other silent. It was quite. clear that these two had been planted on the aircraft to "wind me up". The fat youth described the town in Poland. where I had spent Christmas, and made some unpleasant personal. slurs against me. Most interestingly,. he said the words, "he doesnt know who we are".

Now I find this particular form of words very interesting, because. while it is not a clear. admission, it is only a half-hearted attempt at denial of my guess that "they" = "MI5". Had my guess been wrong, the fat. youth would surely have said so more clearly. What he was trying to do. was to half-deny something he knew. to be true, and he was limited to making statements which he. knew to be not false; so he made a lukewarm denial which on the face of it means nothing, but in. fact acts as a confirmation of my guess. of who "they" are.

On one. of the other occasions when I saw the persecutors in person, on the BA flight to Toronto in June 1993, one of the group of four. men said, "if he tries to run away well find him". But the other. three stayed totally quiet and avoided eye contact. They did so to avoid being. apprehended and identified - since if they were. identified, their employers would have been revealed, and it would. become known that it was the secret services who were. behind the persecution.

Why are MI5 So Afraid to admit. their involvement?

If you think about. it, what has been going on in Britain for the last nine years. is simply beyond belief. The British declare themselves to be "decent" by definition, so when they engage in indecent activities such. as the persecution of a mentally ill person, their decency. "because were British" is still in the forefront of their minds, and a process. of mental doublethink. kicks in, where their antisocial and indecent activities are blamed on the victim "because its his fault were. persecuting him", and their self-regard and self-image of decency remains. untarnished. As remarked in. another article some time ago, this process is basically the same as a large number. of Germans employed fifty years ago against Slavic "untermenschen" and the Jewish "threat" - the Germans. declared, "Germans are known to be decent and the minorities are at. fault for what we do to them" - so they were able to. retain the view of themselves as being "decent".

Now suppose this entire episode had. happened in some other country. The British have a poor view. of the French, so lets say it had all happened in France. Suppose there. was a Frenchman, of non-French extraction, who was targeted by the French internal security apparatus, for. the dubious amusement of French television newscasters,. and tortured for 9 years with various sexual. and other verbal abuse and taunts of "suicide". Suppose this all came out into the open. Naturally,. the French authorities would try hard to place the blame. on their victim - and in their own country, through the same state-controlled. media which the authorities employ as instruments of torture, their view might prevail - but what. on earth would people overseas make of their actions? Where would their. "decency" be then?

This is why. MI5 are so afraid to admit theyre behind the persecution. Because if they did. admit responsibility, then they would be admitting that there was an action against me - and if the. truth came out, then the walls. would come tumbling down. And if the persecutors were to admit. they were from MI5, then you can be sure I would report the fact;. and the persecutors support would fall away, among the mass media as well as among the general public.. When I started identifying MI5 as the persecutors in 1995 and 1996 there was a sharp reduction. in media harassment, since people read my internet newsgroup. posts and knew I was telling the truth. The persecutors. cannot deny my claim that theyre MI5, because then I would report their denial and. they would be seen as liars - but they cannot admit it either, as that would puncture. their campaign against me. So they are forced to maintain a ridiculous silence on. the issue. of their identity, in the face of vociferous accusations on internet newsgroups and faxed. articles.

Have. MI5 lied to the Home Secretary?

In order for. the Security Services to bug my home, they would either have needed a warrant from the Home. Secretary, or they might have instituted the bugging without a warrant. Personally I think it is. more likely that they. didnt apply for a warrant - I cannot see any Home Secretary giving MI5 authority to bug a residence to allow. television newscasters to satisfy. their rather voyeuristic needs vis-a-vis one of their audience. But it is possible that the Security Service presented a. warrant in. some form before a home secretary at some point in the last nine years, for telephone tapping or surveillance of my residence, or interception. of postal. service.

So the possibility presents itself that a Home Secretary. might have signed a warrant presented to him based on. MI5 lies. Just as MI5 lie to the Security. Service Tribunal, so they might have lied to a Home Secretray himself.. MI5 and MI6 are naturally secretive services former home secretary Roy. Jenkins said, they have a "secretive atmosphere ... secretive vis-a-vis the government. as well as [enemies]". Jenkins also said he "did. not form a very high regard for how they discharged their. duties".

It was only a few years ago that MI5 was brought into. any sot the extraordinary thing is that British media. organisations like the state- and taxpayer-funded BBC take. such an active part in the MI5-inspired campaign of harassment. We have. after all heard of MI5 trying to bribe broadcast journalists;. but surely there must be a substantial number who are not bought. or blackmailed by the Security Services, and who take part in the "abuse by. newscasters" of their own volition? The BBC is supposed to be independent of the. government of the day as well as the Establishment in general. While. perhaps it is childish to think that the BBC is. anything other than effectively state-controlled, the degree of collusion between the BBC and the. British Secret Police MI5 is something you would not find in. many countries. Individual tele-journalists in other countries would have enough self-esteem not to allow themselves to. be controlled by their secret police - seemingly, BBC. broadcasters like Martyn Lewis and Nicholas Witchell have such a low. opinion of their employing organisation that they see. no wrong in dragging the BBCs no-longer-good name through yet more mud, at the mere request. (whether supported by financial. or other inducements) of the British secret Police, MI5.

And when challenged, these broadcasters LIE. about their involvement, with just as little shame as MI5 themselves. The. BBCs Information dept have said. that;

"I can assure you that the BBC would never engage in any. form of surveillance. activity such as you describe"

which is an out-and-out lie. Buerk and Lewis have. themselves lied to their colleagues in the BBCs Information department. over the "newscaster watching", but unsurprisingly they refuse to put these. denials in writing. Doubtless. if the "newscaster watching" ever comes to light, Buerk and. Lewis will then continue to lie by lying about these denials. So much for the "impartial". BBC, a nest of liars bought and paid for by the Security. Services!

It is obvious that the persecution is at. the instigation of MI5 themselves - they have read my. post, and only they have the surveillance technology and media/political access. Yet they have lied outright to the. Security Service Tribunal. Similarly,. BBC newscasters Michael Buerk and Martyn Lewis have lied to members of. their own organisation. The continuing harassment indicates they. are all petrified of this business coming out into the. open. I will continue to do everything possible to ensure that their. wrongdoing is exposed.

MI5 Persecution Update:. Friday 11 June, 1999

Harassment. in a pub in Clapham, Tuesday lunchtime

Once. a month, or once every other month, I meet a Polish friends of mine who lives in Clapham. North, and sometimes we go to a particular pub near where he lives. The last time was some two months. ago; I did not have my minidisc-walkman with. me, and consequently was seriously harassed by people MI5. had instructed to harass me, in the pub.

This Tuesday, 8 June 1999, we again went to the same pub for a. pre-meal drink. This time I did have my minidisc-walkman. with me. As you can guess, we were followed into the pub. by a couple of young people (Im getting older and older - isnt. it funny how the MI5 agents all look young these days?). They started talking. about my situation, in particular some travel I had booked the previous. day. Unfortunately, they were talking fairly quietly, and. my minidisc didnt pick up their speech.

MI5s. schizophrenic reasoning is that simultaneously I am very important and worthy of their acts of persecution, and. I am also totally unimportant and their abuse of me "doesnt. matter". Perhaps they should test their agents and. managers for obsessive personalities or psychotic features in the same way as employees are drug-tested. MI5 might. lose their "worst cases" employees if some psychological testing were applied. to their recruitment. procedure.

Toothless Watchdogs.. What a Surprise.

Recently I have. been engaging in communications with two watchdogs, the Security Service Tribunal which deals with complaints. against the security service (and always clears MI5 of any wrongdoing), and the. Data Protection Registrar, which is mandated to investigate. misuse of personal data held on. computer.

In. a letter to Nick Brooks, Security Service Tribunal secretary, dated 20 April,. I asked him if the Tribunal, as an allegedly independent body, had the means to investigate complaints against MI5 other than asking. MI5 to themselves investigate complaints. To my disappointment, his. reply two weeks later answered the question only indirectly, in. the negative. Whatever the reader might think of the merits of the case. I have been putting before you in faxed. articles this last year and half, you will surely recognise. that it is a significant anomaly for the Tribunal to have no independent means. of investigating complaints, particularly given the view expressed even by previous home secretaries that. the security services are. untrustworthy.

MI5 Persecution: No Justice for the Victims. of MI5

In a previous article I detailed the similarities between. the current MI5

Persecution in England, and other. historical instances of similar persecution, notably. that by the Nazi Germans in the thirties and forties. The Germans persecuted first the mentally ill, the. epileptics and those suffering from schizophrenia, then moved on to. racial groups; in todays Britain the persecution is again directed. at those with mental illness, which the British in their. cowardice find easier than taking on racial groups as the Germans did. But. just as in Thirties Germany there was no recourse against a malign and omnipotent. state, so the MI5 Secret Police in the modern. British Fascist State allow no justice for their victims.

No Recourse Against the Security Services. Illegal Harassment

It has become apparent to me over the last. nine years just how loaded the dice are. in todays Britain, a fundamentally fascist country which masquerades as a democracy. Britain is a democracy in name. only; the Establishment, the defence and. MI5 secret police are always there, regardless of which party has been voted into power most recently. - and from "New Labours" conduct. in office one finds it difficult to tell them apart from Old Tories, in. their crackdowns on the sick and vulnerable in society.

In thirties Germany the victims of the Nazi regime had. no legal recourse against their State oppressors; and in todays. Fascist British state, the victims of the Establishment and its MI5 Secret Police similarly have. no recourse. against the illegal state-funded and organised oppression. There is supposed. to be a mechanism for dealing with MI5 crimes, in the shape of the. Security Service Tribunal and Commissioner; yet these have never found favour of a. plaintiff. One might as well ask the Nazi SS to investigate crimes against epileptics. or Jews as ask the Security Service Tribunal to investigate MI5 crimes against British citizens;. it is quite obvious what the. answer is going to be, regardless of what you say to them, and what evidence you. provide. The Tribunal and Commissioner are a mere formality, a whitewashing body to give the. Secret Services a veneer beneath which they hide. their shabby criminality.

"Institutional Racism" and. Bigotry in the Metropolitan Police

The. recent inquiry into the racist murder of Stephen Lawrence found clear evidence of systematic and deliberate racism in. the Metropolitan Police, which cannot have surprised anyone. Commissioner. Sir Paul Condon accepted a somewhat lukewarm. definition of institutional racism as being "unconscious". In truth, and this truth must surely. be obvious to anyone who has any familiarity or encountered the great British. police, the Met has not just "unconscious". racism, but very clearly "conscious" and deliberate racism, of. the kind that would have done Thirties Germans proud. And it. is a bastion of such open racism - when many other parts of society are learning. to live in a multicultural environment, the Met is still living. in the past in its attitude to the minorities.

But in addition. to the systematic racism confirmed by the Lawrence inquiry, there is also. something much more relevant to this case, which is systematic. police bigotry against the physically and mentally disabled, which I personally. have experienced in my dealings with the police over the years. You. cannot expect equal treatment if you are mentally disabled. I tried. to make a complaint to the police in 1995 about the harassment I had been subjected to for several years.. As soon as they found out I had mental illness, they refused. to even talk to me. I tried again in March. 1999; the police made various threats to me, while ranting about "your paranoid rubbish" in reference to the. complaints expressed to them.

The police refusal to do the job they are employed and paid to. do is extremely serious, particularly as this. case is highly important, indeed key to the whole issue of British. self-perception at the end of the 20th century and the beginning of the 21st century.. Britain has lost much in the last fifty years - it has lost an. empire, it has lost its self-respect and. its identity as a people. If the MI5 persecution finally makes it into the light and. the Security Services are seen for the rather cheap bullies their behaviour indicates, it will have a massive and harmful effect. on British self-perception. in the new century.

Security Service. Tribunal - Blatant Whitewashing

A. few weeks ago I spoke on the phone to Nick Brooks, the Secretary of the Security Service Tribunal, which is supposed. to deal with cases of MI5 transgression. I. asked him if the Tribunal had ever found in favour of a plaintiff and against the Security Service. He answered that as. far as he knew, it had. not.

I also asked Mr. Brooks if the Tribunal had any means of investigating allegations. of criminal activity by MI5, other than asking MI5 themselves if they had engaged in such activity. His. rather circuitous written reply states that the 1989 Security Service Act provides that "it shall. be the duty of every member of the Service. to disclose or give to the Tribunal such documents or. information as they may require for the purpose of enabling them to carry out their functions under this Act".. Which is a very round-about way of saying - "No" - the Tribunal has no. way of investigating MI5 crimes -. None At All.

Setting up. the S.S. Tribunal, and creating a Security Service Commissioner, was really an act of falsehood by. the government. It is generally recognised that MI5 are out of reach of the normal. criminal justice system -. the police, as we have seen, have no intesot answer to the. government; in a previous article I quoted Roy Jenkins speaking of "a secretive atmosphere.... secretive vis-a-vis the government. as well as [enemies]", and a "lack of frankness" from. MI5.

If the government wanted to,. it could reform the secret services and ensure they acted in conformance with the laws which. have been enacted for them in the last ten years. But apparently the present. government does not see any need. to ensure security service compliance with the law. As noted above, the. regulatory machinery for MI5 is deliberately weak; the Tribunal has no independent means of. investigation, and it is simply a waste of time complaining to the Tribunal or. Commissioner.

Every. so often, fresh revelations come to light of secret service transgressions. We. have heard from Shayler that MI5 bugged Jack Straw and Peter Mandelson; we have heard. from Peter Wright that MI5 plotted to see Wilson ejected from office; yet so. closed is the system of government that the law is never enforced against MI5 when they "bug and. burgle" everyone from politicians to ordinary. citizens.

No Justice from the Legal. System, either

Britain has a civil and criminal. justice system which effectively limits many complaints from. being heard. For a civil complaint to be brought before a court, you need a solicitor willing to act on. your behalf.. Supposedly it is possible to represent yourself as a Litigant-in-Pthe basis. of being "frivolous and vexatious" or "disclosing no cause for. action in law". This is exactly what happened to me in 1997 when I twice tried to take the BBC to court for spying on me in my. living room at home; my case was twice struck out, and on. the second occasion an order was made against me that. I could not bring further civil litigation against the BBC without leave of. the court.

As the reader can. guess it is quite impossible for a person with schizophrenia,. who complains about the secret services and media interfering in his life, to find a solicitor willing to. represent him in legal action against the persecutors. I have. quite a lot of evidence of the continuing persecution which. I have posted on the website, even if the evidence is quite tentative and. perhaps open to varying interpretations. But I have tried several firms of solicitors; some. of them have acted unprofessionally and abused me; all of them have. refused to represent me. My psychiatrist gave me. the name of the firm of Bindman and. Partners in central London, and I have approached them twice. On each occasion they refused to accept my instructions. Plainly. the problem with Bindmans, which they have admitted, is. their bigotry against mentally disabled people; yet this is not. just something that is wrong with Bindmans, it is. something that is wrong with the legal system as a whole, since the legal system necessitates. finding a solicitor willing to represent you in order to bring a case to court, but it does. not have a mechanism for providing a. lawyer in the case where no solicitor is willing to take on. your case. So the British legal system is such as to prevent cases such as mine from. ever receiving an airing in a court.

So much for the civil courts. But. the criminal justice system is no better. Two years ago the Protection from Harassment Act came. into force. But again,. while the Act is all very well on paper, in practice it is unenforceable in my case, since it would require Police. action to see the law implemented, and if the police. cannot even be trusted to conduct a murder investigation competently (in the Lawrence case),. then what chance is. there of their investigating complaints against the Security Service? Of course, it would be possible for me. to personally issue proceedings through a private prosecution either against. MI5 themselves, or against one or. more of their media tools; but here we see the same problems as with the civil courts, because first of all I would have. to find a. lawyer willing to act on my behalf. Litigants-in-person do exist in the criminal courts, but the Attorney General can bring such. a prosecution to an end by. taking it over and entering a plea of "nolle prossequi"; and I suspect that. if I were to bring a private prosecution against either MI5 or one of their media tools,. then this is exactly what would happen.

So much for British justice. But if. anything the wrongs that have been perpetrated on me by the British justice system. are quite mild to what others have suffered. Others have been wrongly. convicted based on police evasions and lies, and spent many years in jail based on false charges.. I should count myself lucky that despite the. best efforts of the MI5 secret police, I have not acquired any. criminal charges or convictions; which shows that for all their resources and. influence, and the clear imperfections in the British legal system, there. are still limits on how much subversion MI5. can achieve.

The latest in a long. line of injustices

A comment I heard during. the recent scandal of the police mishandling of the Lawrence murder investigation is. that "its not as if the police themselves murdered him". This is not a. particularly wise statement to make about the case,. since it could be argued that the four alleged murderers were aided. in their crime by the expectation that the police would deliberately. botch the investigation - which of course is exactly what the. police did.

But in. my case, this would be a completely inaccurate thing to say - since the MI5 secret-police have expressly been trying to nine. years now to see an end put to my life, either by having me incarcerated and. my liberty ended, or by forcing self-termination on me.. It is exactly as if the secret police "themselves murdered [me]", since that. is what their aim is in. their campaign against me.

The public. has heard of instances of police mishandling of cases, of police manufacturing evidence, lying in. court, extracting false confessions to clear up crimes, et. cetera. Various instances of extra-legal. activity by the secret services have also come to light in the last few years. The unhappy truth. is that what MI5 have been doing to me for the last nine years is really nothing out of the. ordinary for them. To me it seems unbelievable that this sort of. systematic campaign of harassment, which thousands and thousands of people in this. country and abroad are well aware of, could exist for such a long period of time. with the media maintaining. "omerta". But my case is not the first such instance of persecution by the. "British secret police", and judging by the lack of any real controls on MI5, I. very much doubt it will be the last.

MI5 Have Systematically Destroyed. My Life

This. is getting depressing. From the feedback Ive received, the recipients of these faxes are tired of hearing my complaints, and in truth I am. tired of sending them. The reason I havent. yet ceased sending faxes is because I cannot think of any other effective means. of replying to MI5s actions against me, and I feel. I have to do something to try to defend myself. Three/four years ago. I got the MI5 harassment out of my system by posting about it on Internet. newsgroups, and for a few months this tactic was quite. effective - I received (and indeed still do today) support from newsgroup regulars, and felt I could make my voice heard and break the. MI5 monopoly on access to the British media. But that was years ago, and. today nobody gives a. tinkers cuss about my internet posts - so I have sought to escalate matters. by communicating directly with the politicians who allegedly say how this country is supposed to be. run.

Of course, its quite expensive to keep. up a campaign of fax messages for many weeks. Each set of faxes takes approx 50 hours. to send over the weekend, and costs perhaps 35. My. phone bill for the last quarter was 350.. These figures are naturally insignificant compared to what MI5 have been spending against. me over a similar period. It also takes a lot of time and energy to create a new. article every week, and try and find new and fresh aspects and viewpoints on MI5s persecution of me.. I am beginning to run out. of both new topics and energy to write these articles.

So I have a suggestion to put before the. MI5 persecutors who have been wrecking my life since 1990. In. a few days time I will be going on holiday to Poland. and Germany, for a couple of weeks. Previously, almost every time I have travelled by plane, or gone anywhere on holiday,. the MI5 "wreckers". have been most assiduous in destroying these trips. My suggestion is; if. MI5 leave me alone on this next trip, I will cease transmitting these articles. If, however, there are any. clear instances of harassment (and I. am very capable of recognising MI5 harassment when I see it), then I will make public these instances. and publish any recordings I may. make of them, and, unwillingly and unhappily, continue the articles.

Read about the MI5. Persecution on the Web

Keith Hill MP (Labour - Streatham), my. elected representative, as ever refuses to. help.

MI5 Refuse to Allow me to have a. Normal Life

Its kind of difficult to. contemplate having a normal existence when you know your entire house is bugged from top to. bottom, for audio and, very unpleasantly, video; when your employment. is systematically destroyed, over and over again;. when every time you leave the country your travel is disrupted by MI5 plants on the plane yelling abuse at you..... you. get the idea. I would like to have some. semblance of a normal life, like my Polish and English friends do. But MI5 have made this impossible, and they. have leached massive resources from the. taxpayer to institute a life not worthy of the. name on me.

A few years ago MI5 were very. open about their aims in persecuting me. They were shouting "suicide" at me, both in Canada where I. lived at the time, and during my occasional visits to London.. You cant get much clearer than. that. There have been instances as recently as a few weeks ago of this intention being voiced. by their side; on 15 April 1999, a woman at the next ticket counter at the. Royal Festival Hall said;

"it would kill it, you know, it would. just be overkill... they can't stop can. they"

meaning that "they". were trying to "kill it" i.e. me and they "cant stop". The audio file is. at;

I wonder why. they "cant stop". Nobody (who doesnt know already) believes my claims - so what difference. would it make, if they were to "stop" persecuting me? Perhaps what this persons. remarks indicates, is the depth of the obsession MI5 have with this case. They have. chosen at random a. person from the general population, and done their worst to ruin my life. What. is wrong with these people, that they persecute a national of the country whose citizens they are supposed. to protect?

No Chance of. a Harassment-Free Job

Since the harassment started in 1990 I. have had three jobs, the first near

Guildford, the second in Oxford, and the third overseas. in Canada. All three jobs have been systematically destroyed by. MI5. It is so ironic that MI5 employs a team of agents, each well. compensated for their efforts, to persecute just one person paid a mere fraction. of what they get for their "work". In fact,. it is a joke that MI5 is allocated resources for this sort of effort. If this area of. government were run along commercial lines then MI5 would be very rapidly closed down,. they produce nothing of any value, instead spending. their time obsessed with the bugging and surveillance of their former employees like. Shayler, dangerous subversives like Straw and. Mandelson, and "threats to national security" like yours truly.

Applying for. my first post university job

When I was applying for. my first post-university job in the closing months of 1990, I found at two. or three job interviews that MI5 had got there ahead of me. Interviewers knew what words to repeat from what. had been said at my home recently; MI5 had supplied them with. words to hurt me, and the "British secret police" were. trying to wreck my job search and discourage me from joining the world of. work. This and the continuing harassment in the media and by the public meant. that the search for a job took very much. longer than it would ordinarily be expected to take for a person with. my qualifications.

With my. first job near Guildford came the knowledge that MI5 were doing everything. possible to make me lose the job. Despite their efforts I managed to stay in. work for ten unhappy months, during which they made very. clear to me that they were bugging my workplace, my accomodation in Woking, my car, my home..... and they also. made clear that they had "got to" my employer. in Guildford.

Employment with. Oxford

I was able. to find a new job, with Oxford Computer Training Services (now ARIS/Oxford), quite quickly. But it became. very clear, very quickly, that MI5 were treating this job. the same as the first; they tried to get the other. employees and in particular the managers to attack me. It was plainly MI5s intention that I be sacked fro this job. But I. was not sacked; instead, after almost a year of abuse from OCTS. managers, I was forced to seek medical help, and had to take two months. off for medical leave. OCTS MD Hugh. Simpson-Wells was motivated in keeping me on by the fear that if he sacked me, then. I would take him to court for the treatment OCTS managers had meted. out to me during 1992.

Emigration. to Canada

When I emigrated. to Canada in 1994, I did think that perhaps MI5 would leave me alone, given that I had made the effort. to leave the UK and try to find a new life overseas.. I could not see any reason why they would continue to harass. me over in Canada. But clearly the MI5 agents had their salaries to. think about, since continue to harass me they most certainly did, at my home in. Ottawa, and by getting fellow employees to speak against me, as had happened with. previous jobs in the UK.

MI5 are denying me. a future in work

Former Chief Constable of. Devon and Cornwall John Alderson had this to say regarding. MI5's activities;

"MI5 is not under the same restraints. as the police. They infiltrate organisations, people's. jobs and lives. They operate almost like a cancer."

Currently I am on. disability, and I can see that MI5 are denying me a future in work. It would be an insult to. logic for me to return to work and find a job, in the knowledge that an entire team of. MI5 agents, paid in total many times what I would be earning, would. have the objective of seeing me "done down" in the employment, and. ejected from the place of work. This situation. is completely wrong and nonsensical - I would very much like to have a job, but MI5 are preventing. me from even thinking about returning to. work. The culture of secrecy in MI5/MI6 means there is no objective oversight of their. expenditure, when external oversight and greater transparency might lead to wasteful and illogical operations. such as that. against me being shelved.

Watched. and Harassed at my Home and Accommodation

As you will know. if you have been reading these articles, MI5 have watched and harassed me at my home, and at every. accommodation Ive had since 1990. Theyve also watched me at neighbours houses. in London, and at short-term accommodation such. as hotels and bed-and-breakfasts. They have used the. "words" gained from these watching activities against me, by passing these words on to other. people such as OCTS managers for them to make clear that I am. being watched where I live.

Harassed at rented rooms in. Oxford in 1992

This was at its worst in 1992 in Oxford, where during the week I. lived at rented accommodation in. Oxford, and at weekends returned to my parents home in. London. I was being severely harassed by managers at my place of work, OCTS; and it was clear from the things they. said that they were being supplied by MI5 with details of my home life, that they were. being supplied with words. to repeat at me.

In 1992 I moved house in Oxford many times, living. at a total of five rented accommodations in ten months. In January. I started off living in a rented room at Headington near the ring road / A40 intersection; then. when it became clear that. house was being bugged, moved to a rented room in Botley, some miles away. It was. at the house in Botley that I had an "interactive watching" experience. with Martyn Lewis while he was reading the news; I. threw a term of abuse at him; he first flinched, then gave a gsult of what I. had just said, he was no longer "on my side".

So I moved house again. This time to a place in Cowley, near. the Rover car works, where I stayed for a few. weeks. Because of continuing harassment at work, I soon moved from this accommodation, to. yet another rented room on

Iffley Road. By this time. I was very ill and being abused continuously at work. Again, MI5 followed me to the rented room on. Iffley Road, and created. new instances of "newscaster watching". There was a television in the room. which I watched, and as you can guess the newscasters got at me when I was watching the television. Also once I. was assaulted, if thats the word for what happened, on leaving the house;. a youth grabbed me by the coat lapels, roughed me up a. bit with various terms of abuse. I did not report this assault to the police, because what was happening to me. at work was very much worse, and nobody seemed to. think that that was worthy of being reported to the police. Later that. day at work, Alex G, a fellow employee, said "I heard he was assaulted".... I had not told. anyone at work about the incident that morning..... so once again it was made. very clear that MI5. were watching my rented accommodation and giving information about. what was going on there to managers at work.

So I moved house. yet again in late autumn 1992, this time to a rented room in a. large house on Woodstock Road. I stayed there for several weeks as the. situation at work deteriorated due to OCTS managers abuse, until I was forced to take sick leave from work for. two months and attend hospital as an outpatient; at which. point I gave notice on the room, and returned to London.

MI5 continued. to harass me after the diagnosis of serious illness was made. As reported previously, they harassed me on a. flight to Spain in December 1992; and in 1993, when I returned to live and work. in Oxford, they again bugged my rooms,. as well as my workplace, although the intensity of the harassment. was very much less than in 1992.

Watched, followed and harassed. in Canada

It dismayed me to find that. MI5 would not leave me alone after I had settled in Canada. In January 1995 I. rented an apartment at the Bayshore complex in Ottawas west end. For some weeks there was no sign. of the "buggers". But then it started. all over again. They first bugged my car, which had. a car alarm installed - the alarm went off two or three times in a single evening, and the following day gave a. signal that the car had been broken into. Then they bugged. my apartment, and in particular they installed bugs on the phone. line in my apartment.

In September. 1995 I moved to a new apartment in Ottawas Bytown Market area,. the restaurant and entertainment heart of Canadas capital. This proved a serious mistake. In the west end. I had been fairly distant from the centre of town where MI5 concentrated their. efforts at turning people against me. In the Market area. it was much easier for the persecutors to motivate people to harass. me, and over the next couple of years there were frequent instances of harassment by the general. public.

From 1995 I had some. Polish friends in Ottawa, and as the reader can guess, MI5 have spent much effort. trying to break up this friendship. They supplied. various things about my home life to these friends, for example where I was living. in the Market, directly over the road were the studios of a music radio station, which you had to "look up" to see; and MI5. told these friends that I was "looking. up" to see the radio station; so the friends then. replayed these words back to me, that I was "looking up". MI5 have. also made various sexual slanders against me, and these friends also unwittingly. replayed some of the words they had been imprinted with by the MI5. persecutors.

MI5 Will. Never Allow Me to have a Normal Life

I have heard many. excuses as to why MI5 continuously prevent me from having. a normal life. We are told that MI5 are defending the country against a. tere to zero.

When I have. travelled abroad, they always put their people on the flights, on the journeys I undertake, to continue the harassment, so that I am. put off further overseas travel, and chained to my home. in London. Yet even this is illogical, because when I lived in Canada, they. would still put people on flights. back to the UK.... and what possible reason would they have for doing that? Perhaps the truest words to describe. the MI5 persecution. is that reason has nothing to do with their activities - sane people do not behave in the. way the MI5 British Secret Police have been doing.

Summer 1999 - more. MI5 harassment?

In only a few days time I will be going to Europe again. This time I. have deliberately chosen to travel by a non-UK. airline; so we will see if they put their paid agents on this foreign carrier, we will see if. they try to harass. me on this non-British flight.

If they do harass me on. this trip to Europe, or if they resume the harassment. in London after I return home, then I will continue to report their activities in these faxes. As I said at the. beginning of this article,. I would very much like to not have to send these articles any more, but that is not my decision to. make - it is entirely up to MI5 to cease their. pointless persecution of me, once and for all.

MI5. Persecution Update: Friday 9 July, 1999

Harassment in. Poland, July 1999

And still it continues.... in my last fax I said that. provided MI5 made no attempts at harassment. during my two-week holiday this summer, or after I returned to England,. then I would discontinue these faxes. Unfortunately MI5 have. continued to harass me, both during the holiday and after my return to London. I really dont want. to continue these articles, since they take up so much time and effort,. not to mention expense; but the Security Service wont even let me have a holiday in peace. and quiet, so I have to. make further efforts to bring their activities out into the open.

In. early July I visited my aunt and her family in Poland. On Saturday 3 July 1999, I went. to a family barbecue at an allotment outside the city. One of my aunts family has. previously shown himself to be in the "enemy" camp, by saying the Polish equivalent of "something wrong. with him", and various other unprovoked insults. It. is disappointing that one of my family could forsake the. usual ties of blood and take part in the actions against me,. but thats the way it is. This guy turned up at the barbecue, and started making insults against me. In. particular, he started to say something about the video camera which I. had brought along on the trip, and the relevance of the video-camera to my fight against. the persecution.. It seemed pretty obvious to me that my enemies had told him to turn up to this occasion,. and most likely schooled him in precisely what words to say; since hes an unintelligent person. and would not be able to think for himself what insults to make against. me.

Harassment in London, week ending. Friday 9 July 1999

Got back. to London Wednesay afternoon. Two incidents on the Underground returning from the airport. Unfortunately I wasnt recording because. I wasnt expecting trouble, so these slipped through the net. One of. these was verbal sexual abuse, of the type Ive heard. many, many times before these last three-and-a-half. years.

Yesterday, Thursday 8/July/1999, I switched. on Heart FM which had never "got at" me before.... and the presenter started. making jokes about "mad, crazy" etc.. Again, wasnt recording this because Id never had any trouble from this radio station. and wasnt expecting any.

Also. yesterday, on a bus (155?) from Balham to Clapham, a couple of girls started harassing me with taunts of. "crazy". By now I was expecting trouble and recorded an audio file of this instance. of abuse, at web URL;

The cynical. reader might think my demeanour or behaviour had given rise to the taunts of "crazy" recorded above.. But I assure you my behaviour on the bus would not have. made anyone think I was ill; and the taunts the previous day were the same. sexual words as previously; so I'm quite sure that these incidents are either deliberately. staged, or indicative of an overall. high level of awareness among the London public, particularly in the part. of London where I live.

Keith Hill MP (Labour - Streatham), my elected representative,. as ever refuses to. help.

MI5 Persecution: Harassment through the. Radio

One of the aspects. of the MI5 persecution has been harassment through the broadcast and print media;. and one of the aspects of harassment through the broadcast. media is being "got at" by radio presenters. This being "got at" from the radio takes various forms, the. most obvious form being through. overt or hidden words and insults. But there are other, subtler forms. In Canada. a couple of years ago, I used to listen to the local radio stations every. morning driving to work, and listened to the music only,. switching between radio station presets rapidly as soon as a presenters voice came on, so that. I would not be subjected to any verbal harassment. by the D.J.s. But they found a way around this; they kept on playing the same song, every bl**dy morning at the same. time, which had the words "all coming back to me"; the perceptive reader. will remember that the words "coming. back" have special meaning (see the Private Eye cover at. web URL; for the hidden. meaning).

And thats not the only time theyve allowed the. songs themselves to be used as abuse against. me; many years ago Radio-1 in the UK did exactly the same,. and the DJ even made it explicitly clear by saying, "dont you sometimes feel as if the songs. were made just for you".

"We should be done for. attempted manslaughter" says Chris Tarrant

Capital Radio DJs have been "in on it" from the start. One. of the first things I heard in the summer of. 1990 was from a Capital DJ who said, "If he. listens to Capital then he can't be all bad" (supportive, you see. We're not bastards). Much of what came over the radio in 1990. is now so far away the precise details have been. obliterated by time. No diary was kept of the details,. and although archives if they exist may give pointers, the ambiguity of what broadcasters said. would leave that open to re-interpretation.

In spring. 1994, Chris Tarrant on his Capital morning show made an aside to someone else in the. studio, about a person he didn't identify. He said, "You. know this bloke? He says we're trying to kill him. We should be done for attempted. manslaughter".

That mirrored something I. had said a day or two before. What Tarrant said was understood by the staff member in the studio he. was saying it to; they said, "Oh no, don't say that". to Tarrant. If any archives exist of the morning show (probably unlikely) then it could be found there; what. he said was so out of context that he would be very. hard put to find an explanation. A couple of days later, someone at. the site where I was working repeated the. remark although in a different way; they said there had been people in a computer room when. automatic fire extinguishers went off and those people were "thinking of. suing for attempted manslaughter".

Pirate Radio "gets at". me

In another incident in 1990/91, Id been listening to a. pirate radio station in South London for half an hour, when there was an. audible phone call in the background, then total silence. for a few moments, followed by shrieks of laughter. "So. what are we supposed to say now? Deadly torture? Hes going to talk to us now, isnt he?" which meant that. they could hear what I. would say in my room. Note the word "deadly" - they give away. their purpose.

It constantly surprised me that MI5 are. so easily able to subvert broadcasters,. and, in this case of the pirate station, to do so, so quickly. I think. the answer to this question is that they must have very wide contacts in the broadcast media; presumably some or in fact. many of those contacts are literally. "bought". In the same way as they tried to buy Jon Snow of Channel Four news, they must. have bought many broadcasters and use them both directly to make insults against me, and. promulgate their points of view; but also, they must use these "bought". broadcasters to influence other television and radio presenters, who might not. even be aware. that it was on MI5s behalf that they were being influenced to "get at". me.

BBC-Radio-1 D.J.s celebrate. my job termination in November 1991

This is another one. from the "early years". At the beginning of November 1991 my employment in Woking, Surrey was. terminated. Chris Tarrant of Capital-FM had already made nasty remarks about both my. work for the company, and the. managers of the company themselves - "so theyre not really a serious company, well theyd have to. be to employ you wouldnt they".

So. when I was terminated, as you can expect, BBC Radio 1 D.J.s celebrated. On the Saturday. afternoon (either 9/Nov/1991 or 16/Nov/1991 - I cannot remember precisely) I briefly listened to Radio-1. and heard the disc jockeys loudly proclaiming "youre useless,. you should be sacked". On the same day, I went down to the Kwik-Fit in Tooting to get. my cars tyres replaced, and in the office ran into a couple of. their staff, one of them with an Australian accent, who said "what do you think about it then?. Its getting killed on the. radio."

Plainly,. if a random car-repair shop in Tooting knew about the persecution, then many thousands of other people across. the capital and all over the country must have known.. And the phrase "getting killed" shows very clear awareness of what the. MI5 Persecutors intentions towards me were in 1991,. and judging by the continuing harassment, still remain. today.

Recent. Feedback from Virgin-Radio

As readers will know, from mid-March 1999 for. some four months, every weekend, I have. bombarded Westminster MPs with faxes about the terrible, all-encompassing MI5 Persecution. (Jesting aside, it. really is terrible and all-encompassing, in the UK anyway.) In June 1999, after I'd. been at it some three months,. I started getting "covert" feedback from Virgin Radio.

The first feedback I got was. from Danny Baker, on Sunday 13th June. That weekend. I was sending an article which contained biting criticism of the police inaction in this case. Danny Baker on his Virgin radio. show started an angry. rant that "he knows it's rubbish", ie. he was rubbishing what I'd said in that weekend's faxed article. Unfortunately I. wasn't recording this. programme.

The next possible Virgin-Radio feedback was a. week later on 19th June 1999. This is contained in the. audio file above, in which Johnny Boy on his "Wheels of Steel". programme says;

"and if you would like to put a triple play. together, ahhh.... because quite. frankly Hipster and me are running out of ideas...."

He goes on to counter Hipster's "how. dare you" with a protestation that he is "only joking". You can listen to this. incident on my website at URL;

What I reckon is that my article faxed to MPs. that weekend was forwarded by one of the recipients to Virgin Radio. My article had. included the words;

"I am beginning to. run out of both new topics and energy to write these articles."

So what I reckon is that Johnny Boy read the article.... and rephrased. the above line "run out of ... new topics" to "running out of ideas".. I recognise that this is a pretty. tenuous inference to make.... but do listen to the audio file, from. the "ahhh...." pause in JB's speech you can guess he is. about to say something "risky" and at someone's expense. Anyway, I listen. to the Wheels of Steel regularly and will continue to do so, recording it as I always do - so any. future funny remarks will get immortalised on my website! (There was a. previous incident from August 1998. which is preserved at web URL;

but I am sufficiently uncertain about it that I have. not included it in this. article.)

First Ever Radio Reference - Alan Freeman of. BBC-Radio-1

The first time I was ever. referred to on the radio was sometime in May or June of 1990, by Alan Freeman. of BBC-Radio-1. Note that this isnt an "interactive listening" episode,. its different, this was Freeman reading out a letter from one of my. "real life" enemies.

Id acrimoniously broken. up with some former friends in January of 1990, and I. think they were still trying to cause me trouble in June of that year. Freeman on his rock show read. out a letter from an "Andrew Turner"; one of my acquaintances from January 1990 had. been called Andy Turner, so I think its the same guy. Freeman. quoted Turner as saying various things about me, in particular Freeman said "thats a. hell of a letter you wrote. there Andy", "with a schizophrenic you're never alone", and something about the "one who wore. out his welcome with random precision". (from the words of the Pink Floyd song).

When I. was looking for primary causes of the MI5 persecution, this letter which Freeman had read out on his. programme struck me as being potentially one of the sources of the persecution. I. know Turner and various others in that group were very bitter at what they saw as. their failure and my undeserved success, and they were quite determined to upset. the applecart. Of course several. other primary causes are possible; I do not know why MI5 chose me as opposed to someone else, and MI5. are hardly likely. to tell me.

"Absolute Obscene". David Hepworth of GLR

This one Ive assigned a 100% rating on the website.. There are actually two separate incidents, which are linked. through the D.J.s choice of words.. The first incident can be heard in computer audio at web URL;

On 21/Feb/1997, I was listening to BBC GLR, by stealth. Back in 1990. I used to have Capital blaring out of the speakers all over. the garden ("if he listens to Capital. then he can't be all bad", thanks ever so much). But now. I listen on my walkman on headphones with the volume turned right down. It could not. possibly be overheard by any listening device, no matter how sensitive,. because sound does not carry from the phones.

Yet somehow they are still able to tell which station. I am listening to on the. walkman. And last night, I bravely tuned to GLR 94.9FM at around 8.45pm. Everything went well for the. first half hour or so. Around 9.10pm, Hepworth. said the following after the song "Come Around" by the Muttonbirds.

"coming up after this, we got the rock-and-roll. A-level, we have, I assume, Brian do. we have an embarrassment of prizes in there, we do, don't we, absolute obscene amounts of prizes, there. will no doubt be a riot at the back door, and that's, er, A-level. coming up after this"

The key phrases in. what he said are, "EMBARRASSMENT of prizes", and what he himself emphasized. verbally, "ABSOLUTE OBSCENE amount of prizes". It is my belief (based on content and tone of. voice) that when he spoke these phrases he knew I was listening, and. that the phrases refer directly to my situation. The "EMBARRASSMENT" is the embarrassment. he and other media people would feel at having their wrongdoing exposed; the. "ABSOLUTE OBSCENE" (which. he verbally emphasized) described the disgusting sexual abuse which the harassers have been throwing. at me.

There was a second. incident, on 9/May/1997, which may be found on the web (with. computer audio) at URL;

This incident again contains the. words "absolute embarrassment of prizes", with the same emphasis as the first. instance, and laughter following the phrase. So theyre aware of the complaint. I made on Usenet after the first incident; and they are. so arrogant that they do exactly the same again. They. are so arrogant, they know they are being recorded and that what they say will be published on the web, but. they dont care. What corrupt media, and what a corrupt country to. have such corruption in its media.

Three Years of "MI5. Persecution" Faxes

Ten Thousand. Faxes, and Still No Breakthrough

In. the last three years I have sent at least 5,301 faxes directly from my computer, and 4,478 faxes through Demons. extremely useful TPC.INT service, to politicians and. the media, in the subject of the "MI5 Persecution". This has obviously cost me quite a lot of money, not. to mention. time and effort. The aim of all this communication has been to try to put discussion of the "MI5 persecution". into the public arena; unfortunately, this. aim has not been achieved, yet.

This fax will be my last transmission. for the time being, since the summer recess. is almost upon us. Depending on what the persecutors do between now and the autumn, I. may or may not resume faxing later this year. In the article dated 18/6/99. I said Id stop the articles if MI5 left me alone; but they seem to have no fear of these articles, since. they kept pursuing me in Poland and after my return to. the UK. Again, if they leave me alone this summer. then I wont have to resume the articles in the autumn; but I think its fairly. obvious that MI5 have nothing better to do with their time than. to go after me, and its almost pointless to make this offer. when I know they wont cease harassing me.

TPC.INT 1996, 1997,. 1998.....

Three years ago I was living in Canada, and. the only economic way of sending faxes to the UK was. through the international email-to-fax gateway TPC.INT. This highly useful and. totally free service converts emails (which may have Postscript-formatted attachments) into. faxes which it delivers. to any number within the UK. Using the telephone book, I constructed a computer database. of M.P.s fax numbers, and used this database to deliver copies of. the "FAQ - frequently asked questions" article which Id. written some time earlier.

This service is still operational, but given that I have resided. in London for the last year, I do not need to use Demons. service when I can send articles directly from my own computer using. its fax/modem, which is what I have. been doing since 1998. However, instead of just sending the FAQ article, Ive been composing articles. on various aspects of MI5s treatment of me. Since. their activities have been going on for nine years now, and there have been various aspects to their actions; they. have harassed me at work, at home, through the media, etc; I have so far not run out. of things to say, particularly since their harassment of. me is still ongoing, and I have been able to record the actual words. used by their paid agents on my minidisc-walkman. Since mid-March 1999 I. have been sending these articles pretty much every. weekend.

Anyway, as. mentioned above, I intend this to be the final transmission before the summer recess, and it would be. nice not to have to continue these articles in. the autumn. But thats something that depends on them, not. me, and their attitude is unfortunately clear.

Why am I. sending these articles?

Because I want the harassment to stop. The cynical reader might think. from these. articles that I "thrive on adversity" and would be lost without the harassment to complain about; but that is not the case.. In a perfect world I. would like to return to work, in a job unsullied by MI5s attempts to ruin it; I would like to live in a house which. wasnt bugged, with my words being repeated at me wherever. I go; I would like a normal life. I do not particularly thrive on adversity;. I am beaten down by adversity; the purpose of these. faxes is to try to bring the whole matter out into the public arena, where the. rights and wrongs would be visible to all, and once that were to happen,. the adversity might cease. I have had something approaching a normal life a couple of. times in the last nine years, but always, in the end, MI5 turn up and ruin it. I just want these people. out of my life, permanently, and the only way of doing. that is to kick this business into the public arena,. and shame MI5 so that they are incapable of doing. me further damage.

Having said that, unfortunately it seems. fairly obvious by now that these faxed articles are not going to achieve that aim. Some of the. recipients know what I am saying is true; but they. choose to stay quiet - wisely, because if they. were to admit the truth of these articles, then they would bring the wrath of MI5 down on their heads. Presumably most. recipients do not know these articles are true; their reaction. to me is the same as my reaction. to the other apparently deluded people who have sent me email after reading my webpage to tell me it happened to them too; the. reaction being, "leave me alone, I dont want to know". Its sad that many. M.P.s have given me this reaction,. because my case genuinely is different; I genuinely am telling the truth, and the. harassment genuinely is happening to me, and some recipients of this fax know this. to be true.

"Write to your. own M.P."

My local M.P. is Mr Keith. Hill, Labour-Streatham. He refuses to have anything to do with me. He refuses. to represent me, he refuses to talk to me, he has told me not to. communicate with him. He has done absolutely nothing to help me, and he has told me he will do absolutely. nothing to help. me.

Other. M.P.s, recipients of these faxes, have for quite some time been telling me, "write to your own M.P.". On 23 March. 1998, Paul Burstow M.P. wrote to me; "Whilst I take. the issues that you raise seriously, there is a strict Parliamentary convention. that one Member of Parliament does not take up anothers casework. Can I. suggest that you write to your own M.P. at the House of Commons?" Hopefully the. above paragraph will make clear that I have written to. my own M.P. and he has proved unhelpful.

Other M.P.s have told me the same thing. On 21. May 1998, John McFall M.P. told me, "... there. is a parliamentary convention that M.P.s do not take. up cases of people not in their constituency..... therefore can I suggest that you write to your. local M.P. who will be better able to assist you." And on 8 June 1998, Michael Foster M.P. wrote to me. that "M.P.s are inundated with unsolicited faxes .... M.P.s have. a considerable amount of constituent work to deal with, thus. other M.P.s constituents cease to be. of concern in so far as they should have a voice and representation".

Simon Hughes M.P. wrote to me on 5 November 1998,. "There is a strict parliamentary convention which states that. I am not able to represent individuals who are not constituents of mine. My advice is. that you find out who your own Member of Parliament. is rather than circulating your story to all M.P.s.". To my suggestion that Keith Hill M.P. was. doing nothing to help me, George. Foulkes M.P. sent the following faxed response; "If Keith Hill your own. M.P. cannot help no-one else in the House of Commons can." But it is clearly not. a case of "cannot" help, but "will not" help. I have. detailed in letters to Mr Hill specific ways in which he could help me, first of all. by finding a lawyer to represent me. It is Mr. Hills job as a Member of Parliament to represent his constituents; if he chooses not to do so, then it reflects badly. on him.

Kate Hoey Sympathises, but. says, "Write to your own M.P."

Here is part of a. letter Ms Hoey sent to me on 15 June 1999.

I appreciate that you have concerns about the persecution and. harassment that. you feel you are experiencing but I note that your MP is in fact Keith Hill. There is a very. strict Parliamentary code which means that M.P.s can only take action on matters that. relate to their own constituents. I. am aware that you are not happy with the fact that you do not feel Mr Hill will assist you but. I am afraid that I cannot take any action on. your behalf.

Ms Hoey plainly belongs in the camp of people who do not know. about the reality of the "MI5. Persecution". She doubts its existence; "the harassment you feel you are experiencing". She. urges me to see Mr Hills assistance, as have other. M.P.s detailed above.

Really, the fact that I. am unable to obtain assistance from any other M.P., if my own. alleged "representative" Mr Hill chooses not to represent me, is a very basic. weakness in the Parliamentary system. Beinggmainly events at my former. employers in Oxford during 1992, when I was harassed constantly. by manager Steve Mitchell for most of 1992, and was forced to begin attending hospital as an outpatient. as a result. This harassment was obviously of Mitchells own volition,. since I observed him harass similarly another new worker two. years later; but it was also at MI5s instigation, since they kept providing. him with words from my home life which he then proceeded to abuse me with. Yet this is not the only. employment that MI5 have destroyed; the MI5 persecution has lasted. from the end of my student days until the present time, during. which I have had three jobs, all of which have been in various. ways destroyed by MI5s deliberate actions.

In. March 1999 I decided to try to force the issue once and for all. Ever weekend for the. last four months, apart from two weeks when I was on holiday, I have sent original articles by fax directly from my computer. to Westminster politicians. Here is a summary. of the articles of the last four. months;

How to Identify. the Persecutors

Their use of Schizophrenia to discredit. my claims
Comparing the MI5. Persecution with German "Final Solution"
MI5 are. Plainly Trying to Kill Me
MI5 Waste Taxpayer Millions on. Pointless Hate-Campaign
Four Years of "MI5 Persecution" Posts on Internet. Newsgroups
MI5. Agents are Clinical Psychopaths
BBC Newscasters. Lior the Victims of MI5
MI5 Have Systematically Destroyed. My Life
Harassment through. the Radio

To my deep worry these fourteen faxed articles have. still not achieved the objective of kicking the matter out into the public arena. and forcing an admission either from the persecutors, or from those. "in the know", which includes some. M.P.s.

I dont really know what else to do to try. to bring the "MI5 persecution" out into the open. I would have expected that. these weekly faxed articles would. have had some effect, but the only result has been M.P.s telling me to contact my own representative Mr Hill who refuses. to talk to me. I understand the convention that M.P.s. deal with their own constituents and not those of other M.P.s, but there seems to be a gap. in the process since it allows your own M.P. to. refuse to deal with you, and then you are totally denied any representation at. all.

Conclusion

The. only conclusion I can inform the readership of these articles of, is that there is no conclusion to this matter, yet! Three years. of intermittent. articles, and four months of faxes every weekend, have been absorbed by some of the most powerful. people in the country, to no effect.

Whether these articles continue in the Autumn. is entirely up to the "opposition". I. offered them a cessation of complaints if they would leave me alone on holiday in June/July, and. they went right ahead and harassed me anyway, on holiday and after I returned to London. If. MI5 cease their activities now, then I wont have. to continue these faxes in the autumn; but. I suspect they wont cease, which means youre in for more articles later this. year. "There will be no conclusion."

MI5 Want. Me to Send You these Faxes

MI5. seem to Want to Spin this Business out for as Long as Possible

The. MI5 persecution has now been going on, starting from June 1990, for well over nine years. If I knew. how to put an end to it then I would do so. Of course MI5 have indicated how they wish to finish the matter,. by finishing me off; they indicated this very. clearly years ago when they were. shouting "suicide" at me.

But a deeper truth is that. the MI5 agents carrying out the persecution rely on it. for their income and their livelihood. They have absolutely no interest in anything other than spinning out the. whole business, because that is how they will. maximise their earnings from their employer for the "work" they. do against me.

A vital part of the fantasy structure MI5 have created about me is. that I am somehow a worthwhile. target. If you bother to read these faxes, if you browse my website, or perhaps read my posts on. the uk.misc newsgroup, you will have by now. twigged that I am a totally insignificant person who in a proper dictatorship like East Germany. would not merit five minutes of Stasi time. But Britain is improper in the. methods of its corruption, and the Security Service seeks to present me as being a an evil fascist,. an evil communist, an evil something-else, and. even a "national institution".

It. occurs to me that to some extent I am playing into their hands, into their scheme of things, by writing. these articles and sending these faxes. By doing these things,. I elevate my profile, and fuel MI5s paranoid obsession with me. But to stop sending faxes would be to give up the. only hope. I have of seeing their campaign "outed" and justice done. Certainly there is no point going to the police. again; and as remarked in a previous article, the Security Service Tribunal routinely. whitewashes every complaint that is placed. before it.

So although MI5. seems to want me to continue sending these faxes, doing this is the only. real chance of getting this business out into the open. And so Ill continue trying. to kick down their house of cards. At least my situation is less serious than that of some other. victims of the secret services; unlike Shayler I am not broke and exiled; unlike. Fayed I have not. lost a son to the posited activities of the secret services. All I. have lost is some of my health, some of my life, and some of my possible career.

MI5s Abuse. of me is without Cause or Reason

It constantly puzzles me that MI5 refuse. to leave me alone, wherever I go and whatever I do, or rather, whatever I dont do, since Im not a. very socially or otherwise active person.. When I am in England, they chase me all over the place, and once theyve found me, they pay people to. shout rude words at me. When I am in. Europe, they again chase me all over the place, and as usual pay people to shout. obscenities at me. When I am in Canada. or visiting the States, they faithfully chase me all over the place, and when they find me,. pay people to shout obscenities at me.

It is. hard to avoid the conclusion that these MI5 operatives who chase me are total. lunatics. You will remember from a previous articles the assessment "MI5 Agents are Clinical Psychopaths". They have tried. to blame me for what they do and. what they say; yet their lies have been wafer-thin, and are. clearly seen to be oiled by the money which they acquire from the Government,. and ultimately from the taxpayer.

They have tried various lies to put the. blame on me; "we have to abuse him because hes. a nutter", as if there werent many tens of thousands of other people with schizophrenia. in the United Kingdom. Their choice of abuse words is telling; subconsciously perhaps they. realise that it is they who are. the "nutters", and they try to project their own illness onto their target.

MI5 Operatives have Nothing Else to Do With. Their Time

Ive seen the. same "Alan Holdsworth" person three or four times over a period of several years. I saw him at the Civic Hospital in. Ottawa in the Emergency Ward, where he falsely declared his name to. be "Tad"; at Ottawa airport in summer 1998; and on board another flight in. 1995.

So what we see. from the above paragraph is, the same people are delegated to watch me. for many years. Without me, they wouldnt have a job. They literally have. nothing else to do with their time, except indulge their voyeurism against me. With this observation,. we come to the core of MI5s campaign. against me; these people are not fit for any job other than the exercise of voyeurism against me, and if sanity were to land on. MI5 then they would be out of a job.. If sanity were truly to land then these people and their employers would be prosecuted. for offences under the Protection from Harassment legislation, which they are clearly. breaking.

It is. one of the ironies of their campaign that MI5 have been trying to make. me an object of ridicule for completely trivial things I have done, while. MI5 themselves have simply not mentioned how ridiculous is their own behaviour and that of broadcast media. journalists, in spying on me while they read the news. for example. If the whole truth of this business is ever exposed, and despite all my efforts it still. seems there is a block on its exposure in Britain, then the rights and wrongs will. be clear to all, and no amount of MI5 lies will be able to. change that. MI5 presumably do. realise just how damaging such a revelation would be both to themselves, and to broadcast media such as the BBC. and ITN, because there has not been even the slightest chink in. the armour, despite four and a half. years of my complaints on internet newsgroups and by fax to politicians. and the media.

MI5s Final Kick. in the Teeth to the British State

For someone like myself born in the late sixties it. seems peculiar to think that Great Britain once. used to have a say in the destiny of foreign peoples in far-off sections of the globe. Modern. Britons tacitly accept the lowering of their country to a third-rate power. reliant on the United States for what. little say it has in the world. A third-rate power, now "reverse-colonised" by third world peoples it once. ruled and riven with internal. problems so severe the government hardly dares acknowledge them.

To this third-rate power the MI5. secret police are delivering the final kick in the teeth through a campaign of persecution which. is guaranteed to hold the state up to ridicule throughout the world when it. is finally exposed. As a "thought experiment" suppose the French or the. Spanish security service. had done to one of their own born citizens what MI5 has done in. this country. Suppose say the Spanish had planted hidden cameras in his home,. for the perverted pleasure of their state television newscasters, just as hidden cameras have been placed in my home for. the perverted pleasure of Martyn Lewis,. Nicholas Witchell et al. Suppose the Spanish service. had for nine years been trying to force suicide on their target; at times, so blatantly. that they shouted the word "suicide".

Now suppose they were. caught.

Of course, as long as MI5 arent caught, theyre laughing.. The psychopathic security service agents gets their kicks from shouting. abuse at me; the newscasters, Lewis, Witchell etc get their jollies, "it was so. funny", we were watching this bloke and he couldnt do anything about. it.

But once theyre caught, the sky falls. in. Of course, the "patriotic" MI5-funded media in Britain will. try to put the best spin on the MI5/media activities; it was the targets fault, of course. But. most of the world bears no allegiance to Britain. If this business is ever. exposed then a weakened Britain will. become the laughing-stock of the world. And I promise. you, the security services persecution of me will be exposed. MI5 has delivered a final kick in the. teeth to the British state, and I will do everything I can to ensure. the world hears about what they have done.

Metropolitan Police Refuse. to Investigate the MI5 persecution

I have on a couple of. occasions tried to motivate the police to investigate MI5s. actions against me. On each occasion they have refused to do so. In 1995 I went to my local police station and spoke to. an officer there;. he refused to accept my complaint, and seemed interested only in seeing me leave the station as. quickly as possible.

Earlier this year I had some communications. with Det.Sgt.Richards of Charing Cross police. Again I asked him to. deal with MI5s actions against me. Unfortunately DS. Richards conformed to the negative stereotype of the bigoted, ignorant "copper"; he said, "I have read your various. bits on the internet. I'm afraid there is no substance or credence to it.. It's an absolute load of. rubbish. I don't investigate rubbish. I can't be more blunt. or to the point than that."

You have. to wonder at the state of law enforcement in Britain. If the victim of a murder is. black, as happened in the Lawrence case, the police deliberately botch the investigation. If. the victim of a crime is mentally ill, and the perpetrators are the. secret services, as in my case, then the police refuse. to even begin to investigate the crimes committed.. Politically Britain is a third-rate country, but from the point of view. of obtaining justice, Britain ranks down there with third-world countries. You almost feel that. MI5 and their media buddies would not even have any shame if their activities. against me were exposed; after all, why should they? they. have the money, they have the control, OK so perhaps theyve broken. a few dozen laws, but doesnt the fact that the police are too. corrupt to investigate these crimes, doesnt that prove that in fact no crimes have been. committed?

I should say again what I have said earlier in this article.. My losses over the. last nine years have not been as great as those of other victims of British Secret Police malefaction. Fayed lost. his son to their murderous activities; in my occasional communications. with former MI5/MI6 employees. I have been informed that a "permanent solution" is not uncommon for. opponents of the British secret police. I have lost health and financially, but am obviously well enough to. keep fighting my case. Others have lost much more than I. If the joke which. is British "law enforcement" refuses to enforce laws against the. security services then that is something that is recognised in other countries and Britains. stock correspondingly falls. Not that it has very far to. fall; the days when England had any say in the. world are long gone.

MI5 Want These Faxes to. Continue

Before the. holiday, I said that if MI5s harassment of me stopped, then I would. cease my complaints. They have known very well that if they continued to. harass me then I would resume the fax campaign in the autumn.. Yet they have not stopped persecuting me. Recently a woman outside my domicile screamed her head off with abuse. in the direction of my window; and on Saturday 2 October, when I was. shopping at a nearby supermarket, a man shouted the particularly vile. sexual swear word which I have heard many times before over the last few. years.

MI5s attitude shows complete arrogance. Yet it also. shows that they want the faxes to continue and deliberately. try to provoke me into sending further faxes. The reasons for this. are given in the first paragraphs of this article; the MI5 operatives who persecute. me have nothing else to do with their time; to make their campaign, against an apparently. unreacting target,. have some value, they have to force me to react in some way against their actions; and by. reacting in this way, by bringing their campaign to. the attention of British politicians, I play into their hands, by giving their campaign the attention. and importance which they feel it deserves.

In. the short term, by sending these faxes, perhaps I am doing something they want me to do, but in the. longer term it is undoubtedly more in my interest than theirs for their activities to be exposed.. If their operatives truly do wish to see these faxes continued. then they are committing a serious mistake, because it. significantly increases the risk if M.P.s (some of whom already. know about MI5s activities against me) are advised of my. side of the story.

I will continue to monitor and record the. secret services activities against me over the next few weeks. If they diminish and cease, as. I hope they will, then I may be able to call a. halt to these faxes; but that it something which. is entirely up to them; recently their continued harassment makes clear that they do wish. the faxes to continue, and in all sincerity I do think they will continue their. activities and make it impossible for me to cease these. faxes. It may trouble you to receive these articles, but it troubles. me much more to be on the receiving end of a national persecution campaign; and while. Britain does not have free speech provisions as does Canada in the. Charter of Rights and Freedoms, and the US in the first amendment. to the constitution, in practice I do not think anyone is going. to try to have me locked up for speaking the truth. I still cherish. the hope that the veracity I express will be shown for what it is, and that the truth. will prevail and make me free.

Removing the Mask of Anonymity from. the MI5 Operatives

Undoubtedly one factor. encouraging the MI5 agents actions against me has been the fact that they can shelter behind a. mask of anonymity while they carry out their abuse. This. is both a sign of their realisation that their actions are. criminal; for crimes are harder to pin down and make a coherent complaint. about when their perpetrators are unknown; and it is a sign of. their cowardice, since they lack the backbone to say things to my face themselves; instead they almost always. rely on third parties to carry out the. actual acts of abuse.

On a. few occasions I have seen the perpetrators, but on each occasion they have managed. to preserve their anonymity. They travelled on the same British Airways flight as me in 1994; but BA have ever. since refused to give up the passenger list for the flight, and the. police and lawyers have proved useless in obtaining their identities from the. list. Also one of them followed me into A&E department of Ottawas. Civic Hospital a couple of years ago, and gave his name as (if I heard. correctly) "Alan Holdsworth"; but the doctor refused to. give out his identity when I later tried to speak. to him.

If only we knew the identities of the individual operatives, then it. would be possible to find. out the identity of their employing organisation. But I think we know the latter. already, since I have been accusing them on internet newsgroups for. four and a half years now, and they have never denied my guess. Indeed, when I was travelling in January 1996 back. to Ottawa, two youths on the (British Airways. again, unfortunately) flight made a lot of noise at. me, one of them saying to the other that I "didnt know who we. are". That is a wafer-thin denial; I had been saying for a year that they were MI5, so a stronger denial. would be necessary if my guess were truly mistaken. I think the lukewarm denial. was worse than no denial at all, since it confirmed. my guess that the employing agency was indeed. MI5.

Conclusion

It has. been suggested to me that by sending these faxes I could be making trouble for myself; but I dont think. so. My psychiatrist knows what I am doing; indeed I have given him a couple of these articles for. him to cast an. eye over.

I dont want to have to send faxes for the next year, or. the year after that. But that is entirely up to MI5.. If they continue to persecute me then I am forced into defending. myself. The ball is in their court, and it is entirely up to them what they do. If as. I suspect it is their intention that these faxes continue,. if that is what they insist will happen then so be. it.

MI5 Persecution. Update: Friday 31 March, 2000

22,544 Faxes Delivered in Three Years, and. Still No Breakthrough

In the. last three years I have sent at least 22,544 faxes to recipients in the. UK, of which at least 13,974 have gone to Westminster. Last weekend alone I sent 832 completed faxes. to politicians, the media and various others, on the subject of MI5s mistreatment. of me these last ten years.

I believe some of. the recipients know of MI5s actions against me in the last decade; yet they maintain strict "omerta". in fear of the security services persecution. actions being made public.

MI5 Insist that these Faxes. must Continue

Between. September 1999 and mid-January 2000, the persecutors, whoever they might be, mostly left me. alone. I counted only three incidents in almost five months - which is a lower rate than. at any time since June 1990, when this. business started.

By leaving me alone for several months, the "oppressors". were making an implicit assurance that they would continue to leave. me alone in the future. On. 11 January I posted to an internet newsgroup accepting what I saw as their assurance of no further harassment, stating that I. would cease sending these faxes - which is the only. thing I do in my defence -

if they continued to. leave me alone. And for two weeks I did indeed refrain from. distributing these articles.

But MI5 acted. in bad faith. From the last week of January until the beginning of. March, they resumed their hate campaign against me with a vengeance. They even put people in my road three. times in February, one instance of which I. recorded. They resumed their normal behaviour of bugging my phone and house, listening to where I would go,. and then placing. people in that location to "aggravate and annoy" me.

What MI5 did in February is plainly a contravention. of the Protection from Harassment Act 1997, since it has caused. me "alarm and distress" as specified in the. Act. But it is a waste of time going to the police with a complaint, since the police have. done, and will do, absolutely nothing. I complained. to the Metropolitan Police in 1995, and they refused to take my complaint. When I complained. again in 1999, the detective sergeant laughed at my complaint, with the words, "It's an absolute load of. rubbish. I don't investigate rubbish. I can't be more blunt or to the point. than that." It is useful to remember that the. Met also treated Stephen Lawrences parents with similar discourtesy; police. prejudices are similar in my case, so I can take some comfort from. that case and hope that one day I will get a fair. hearing.

MI5 acted in bad. faith, but they also acted with arrogance. They do not care if I send 800 faxes every weekend,. since they know I cannot prove my claims, and the recent Shayler case. shows how weak external oversight is of the secret services. But they. acted with more than arrogance - the MI5 agents actually want my faxes. to continue, they insist that these faxes continue, since my communications give them an excuse. to continue their activities, and continue in the. paid employ of the secret service. Despite their use of diverse proxies over. the last ten years, it is the same MI5 officers. behind the campaign all the time - I have seen one of them on three occasions. in Canada over a period of years, and it is a safe belief that that same. person continues to be paid for his "work" in harassing me in London now. The average cost of an MI5 employee is some 75,000. per annum, so one may infer that their. officers are amply compensated; their insistence that "hostilities" are maintained is. understandable when placed in. this light.

MI5 Persecution. Update: Friday 7 April, 2000

22,544 + 837. = 23,381

Last weekend I delivered another 837 faxes to. politicians and the media on the. subject of the security service conspiracy which has destroyed my life. This brings the total in. the last three years to at least 23,381. These totals. do not include partially delivered faxes.

Some of. the recipients of these faxes must know that what I say is true;. and I hope to motivate those people to acknowledge the reality of the harassment which has followed me for. ten years. It takes much time to transmit these articles, but as OCG MD. Simpson-Wells said to me in 1992, you have to be a good. communicator if you are to succeeed.

Harassment. in February 2000

Following a quiet period of almost five months,. the persecution resumed with a vengeance in late January/February 2000. At this time I was. at home in Clapham, London and was a relatively easy. target for the persecutors.. They have my house bugged, for audio and I believe video in some rooms as well; so they can find out easily. where I will be going on a particular day, and place people in that location to mouth words. of abuse at me. (I know the last sentence sounds like classic paranoia, but. it happens to be true, and. some of the people reading this know it to be true.)

On Friday 11 February 2000 I went shopping in Croydon,. to buy a watch at H. Samuels jewellers in the Whitgift Centre.. While I was there two youths came into the. shop, one of them quietly uttered an obscenity at me, and they immediately walked. out. They showed no interest in the shop.

That Sunday I met with a. friend in Clapham, who started needling me about "do you know anything. about the CIA and FBI?". Rather unsubtle, and worrying considering Ive known this guy for 20. years. From the words and demeanour of. this "friend" and others in February, I saw that the persecutors have again been trying to. separate from me what remains of my social. life.

Incidents. in my Road in February

MI5 very rarely place people in my. home road to harass me, but such was their persecutory fervour in February that. they did so on three separate occasions. On the first such occasion, I. was met my two youths who, grinning, said a deeply offensive sexual obscenity at. me - at which I coughed. at them, so they called me a "wanker". This incident is safely recorded on minidisc-walkman, but because of. the offensive nature of their abuse the recording. will not be made public.

Another incident very early in the morning of Sunday 20/Feb/2000. occurred outside. my home, following an evening in Croydon with some schoolfriends. Again there were. two youths - for some reason the persecutors always travel in twos or threes, very rarely is there. just one of them - perhaps they need a group. to bolster their courage, perhaps just one of. them wouldnt have the guts to say something unpleasant. One of the youths said quietly, and. bitterly, "shitty, very shitty".

Anyway, in March. there were no further incidents near my house in in my road, and our. neighbours are very well disposed towards us, so let us hope that. the current quiet continues.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= the BBC, television and. radio -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

The first incident in June 1990 was when. a BBC newsreader made what seemed to be a reaction to something which had happened in my. home, and out of context. of what they were reading. My first reaction was disbelief; nothing of the sort had. ever happened before, the idea that such a thing could occur had not crossed. my mind, yet there was no doubt of what had just taken place. My disbelief eroded. as this recurred time after time. Besides the news, offenders included. shows such as Crimewatch (!), Newsnight, and "entertainment" shows. There seems to be very. little moral understanding among the people who make these programmes; they just. assume they will never be caught, so they carry on without. a thought for the illegality or amorality of what they do. The only time I ever. heard a word raised in doubt was by Paxman being. interviewed by someone else (I think by Clive Anderson). back in 1990; referring to the "watching" he said it troubled him, and when asked by the host. what you could do about it, replied "Well, you could just switch. it off" (meaning the surveillance monitor in the studio).. He clearly didn't let his doubts stand in the way of continued surreptitious. spying from his own or other people's shows, though.

Now you're convinced this is a troll, aren't you?. This story has been the subject. of much debate on the uk.* Usenet newsgroups for over a year, and some readers believe it. to be an invention (it has even been suggested that a group of psychology students. are responsible!), others think it symptomatic of a. derangement of the author, and a few give it credence. Quite a few people. do know part or all of the story already, so this text will fill in the gaps in their knowledge. For. the rest, what may persuade you of the third possibility is that some of the. incidents detailed are checkable against any archives of radio and TV. programmes that exist; that the incidents involve named people (even if. those hiding in the shadows have. not made their identity or affiliations evident), and those people may be persuaded to come out with the truth; and that. the campaign of harassment is continuing today both in the. UK and on the American continent, in a none-too-secret fashion; by. its nature the significant risk of. exposure increases with time.

On several occasions people. said to my face that harassment from the TV was happening. On the first day I worked in Oxford, I spent the evening. in the local pub with the. company's technical director Ian, and Phil, another employee. Ian made a few references to me and said to Phil,. as if in an aside, "Is he the bloke who's been on TV?" to. which Phil replied, "Yes, I think. so".

I made a number of efforts to find the bugs,. without success; last year we employed. professional counter-surveillance people to scan for bugs (see later) again. without result. In autumn 1990 I disposed of my TV and watched virtually no television for the. next three years. But harassment from TV stations has gone on for over. six years and continues to this day. This is something that many people. obviously know is happening; yet the TV staff have. the morality of paedophiles, that because they're getting away with it they feel no. wrong.

Other people who were involved in the abuse. in 1990 were DJs on BBC radio stations, notably disc jockeys from Radio 1 and other. stations (see the following section). Again, since they. don't have sense in the first place they can't be. expect to have the moral sense not to be part of criminal harassment.

-=-
-= MI5: bugging and. counter-surveillance -=
-=-

PO: >Did you ever look for the bugs in your house ? If not, why not ? I. mean if
PO: >I thought that was happening. to me, I'd search the place from top to bottom,
PO: >I mean I live there I would know if anything. was out of place. If I was
PO: >really suspicious, I would call in one of those bug. detection teams which
PO: >have those machines that pick up the transmitted. radio waves. This
PO: >reminds me of. BUGS, that new programme on BBC1 on

That's exactly what we did. We went to a competent, professional. detective agency in London, paid them over 400 quid to debug our. house. They used scanner devices which go to over 1 GHz and would pick. up any nearby transmitter in that range, they also checked the. phones and found nothing... but if the tap was at the exchange,. then they wouldn't find anything, would. they?

CS: >Doesn't this suggest to you that. there are, in fact, no bugs to be found?

You can assume that they've done this sort. of thing to other people in more "serious" cases, where. they would know the targets would suspect the presence of electronic surveillance. So. they will have developed techniques and devices which are. not readily detectable either by visual inspection or by electronic means. What those techniques might be, I couldn't. guess.

In this case, the existence of. bugging devices was clear from the beginning, and they "rubbed it in" with what was said. by the boy on the coach. It was almost as if they. wanted counter-surveillance people to be called in, who they. knew would fail to detect the bugging devices, causing loss of credibility. to the other things I would have to say relating to the harassment.

I did all the things someone in my situation would do to try to. find the bugs.. In addition to calling in professional help using electronic counter-surveillance, I made a. close visual inspection of electrical equipment,. plus any points where audio or video surveillance devices might have been concealed. Of. course, I found nothing. Normal surveillance "mini-cameras" are quite noticeable and. require visible supporting circuitry. It seems to me the best. place to put a small video surveillance device would be additional to a piece of electronic equipment. such as a TV or video. It would be necessary. to physically break in to a property to fit such. a device.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= Capital Radio. - Chris Tarrant -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

Capital Radio. DJs have been "in on it" from the start. One of the first things I heard in the summer of 1990 was from a Capital DJ who said,. "If he listens to Capital then he can't be all. bad" (supportive, you see. We're not bastards). Much of what came over the radio in 1990 is now. so far away the precise details have been obliterated by time.. No diary was kept of the details, and although archives if. they exist may give pointers, the ambiguity of. what broadcasters said would leave that open to re-interpretation.

In spring 1994, Chris Tarrant. on his Capital morning show made an aside to someone else in the. studio, about a person he didn't identify. He said, "You know this bloke? He. says we're trying to kill him. We should be done for attempted. manslaughter".

That mirrored something I had said. a day or two before. What Tarrant said was understood by the staff member. in the studio he was saying it to; they said, "Oh no,. don't say that" to Tarrant. If any archives exist of the morning show (probably unlikely) then it. could be found there; what he said was. so out of context that he would be very hard put to find an explanation. A couple of days later, someone at the site where I was working repeated. the remark although in a different way; they said there. had been people in a computer room when automatic. fire extinguishers went off and those people were "thinking of suing for. attempted manslaughter".

Finally, this isn't confined to the established radio stations. In. 1990 after I had listened to a pirate radio station in South. London for about half an hour, there was an. audible phone call in the background, followed by total silence for a few moments, then shrieks of. laughter. "So what are we supposed to say now? Deadly. torture? He's going to talk to us now, isn't he?", which meant that they. could hear what I would say in my room.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-=. MI5: cost of the operation -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
```

Here's what a couple of other people on. Usenet (uk.misc) had to say regarding the cost of. running such an operation...

PO: >Have some sense, grow up and smell reality. What you are. talking about
PO: >would take loads of planning, tens of thousands of pounds and. lots of
PO: >people involved in the planning, execution and. maintenance of it. You
PO: >must have. a very high opinion of yourself to think you are worth it.

PM: >But why? And why you? Do you realize. how much it would cost to keep
PM:. >one person under continuous surveillance for five years? Think about
PM: >all. the man/hours. Say they _just_ allocated a two man team and a
PM: >supervisor. OK., Supervisor's salary, say, #30,000. a year. Two men,

PM: >#20,000 a year each. But they'd need to work in shifts --. so it would
PM:. >be six men at #20,000 (which with on-costs would work out at more like
PM: >#30,000 to the. employer.)
PM:. >
PM: >So, we're talking #30,000 x. 6. #180,000. plus say, #40,000 for the
PM: >supervisor. #220,000. Then you've got the. hardware involved. And
PM: >any transcription that needs doing. You don't. think the 'Big Boss'
PM:. >would listen to hours and hours of tapes, do you.
PM:. >
PM:. >So, all in all, you couldn't actually do the job for much less than
PM: >a quarter million a year. Over five years. What are you doing that. makes
PM: >it worth. the while of the state to spend over one and a quarter million
PM: >on. you?
